ALBERT M. HERR, President-elect; A. F. J. BAUR, Secretary-elect.

Grass and Roses.

I looked where the roses were blowing,—
They stood among grasses and reeds;
I said, "Where such beauties are growing,
Why suffer these paltry weeds?"

Weeping, the poor things faltered,
"We have neither beauty nor bloom,
We are grass in the roses' garden—
But our Master gives us this room.

"We have fed His humblest creatures,
We have served Him truly and long;
He gave no grace to our features—
We have neither color nor song.

"Yet He who has made the roses
Placed us on the self-same sod;
He knows our reason for being—
We are grass in the garden of God."

—JAMES FREEMAN CLARKE.

American Carnation Society.

Eighteenth Annual Meeting, Indianapolis, Ind., January 27-28, 1909.

Convention Proceedings.

President Stuart of the State Florists' Association of Indiana, promptly called the eighteenth annual meeting of the American Carnation Society to order by presenting City Attorney Bowen, who, in the absence of the mayor, presented the visitors with the freedom of the city in very felicitous terms. Herman Junge, of Cumberland, then welcomed the guests on behalf of the State Florists' Association, E. G. Gillett, of Cincinnati, O., responding. President Patten then delivered his address and was followed by Treasurer Dorner, whose report will be found elsewhere in this issue. Secretary Herr presented his annual report, which included his resignation. Letters were read from the florists' clubs of Milwaukee and Pittsburg, urging that the next convention be held in those cities, the former placing a claim to consideration in 1911 if the members decided to go elsewhere next year. Pittsburg was ultimately chosen as the place of meeting in 1910. Officers for the ensuing year were elected as follows:

Albert M. Herr, Lancaster, Pa., president.

Fred Burki, Pittsburg, Pa., vice-president.

Fred Dorner, Jr., treasurer.

A. F. J. Baur, secretary.

Richard Witterstaetter was selected to fill the vacancy caused by the retirement of W. N. Rudd, and Fred Burki was appointed a member of the board of directors for a five year term, succeeding J. S. Wilson, of Des Moines, Ia.

Albert M. Herr.

President-Elect American Carnation Society.

The Exhibition.

The display of carnations at some former exhibitions of this society has been more extensive probably, but never before has there been staged blooms of such uniform excellence while the new varieties were numerous and of high grade. The novelties that attracted most attention were Dorner's Hoosier Lad (No. 175-06) and Bertermann's J. Whitcomb Riley, yellow. Details of the awards and scores will be found elsewhere in this issue. The miscellaneous exhibits included fine vases of White Killarney rose from the F. R. Pierson Co., Tarrytown, N. Y., and the Waban Rose Conservatories, Waban, Mass.

J. A. Peterson, Cincinnati, O., made a fine display of Dracæna terminalis, Begonia President Taft and cyclamens. H. W. Rieman, Indianapolis, exhibited fine cyclamens, Primula obconica and miscellaneous plants. A. Wiegand & Sons, Indianapolis, made an extensive display of artistic cut flowers and plant baskets. Weiland & Olinger, New Castle, Ind., showed roses and miscellaneous cut flowers. Alfred Pahud, Indianapolis, showed double poinsettias in excellent condition for this time of year. Bertermann Bros., Indianapolis, staged a nice lot of Adiantum Farleyense.

Kroeschell Bros. Co., Chicago, was on hand with a model of its hot water boiler. The Morehead Mfg. Co., Detroit, Mich., showed its steam trap. The

Pulverized Manure Co., Chicago, displayed its Wizard manures. The Advance Co., Richmond, Ind., exhibited ventilating apparatus. A. L. Randall Co., Chicago, showed supplies.

The judges were: Wm. Nicholson, W. N. Rudd, Peter Fisher, S. S. Pennock, Eugene Dailledouze, and Fred Burki. The German house has one of the best halls in the country for an exhibition of this character, cool and well ventilated. And both the hall itself and lobby leading to it were tastefully decorated with wild smilax and foliage plants.

Thursday's Proceedings.

At Thursday morning's session W. N. Rudd brought up the matter of awarding the society's gold medal to varieties scoring a given number of points rather than the best variety exhibited, and on his motion it was decided that hereafter varieties exhibited for the gold medal must score 90 points before they can be given that award. On the motion of F. R. Pierson the scale for the silver medal was fixed at 88 points and a third motion made the requirements for the bronze medal 86 points. The report of the judges was then adopted. H. B. Dorner followed with his paper and Pittsburg was chosen as the next meeting place on Wednesday and Thursday of the last week of January. In the contest for the secretaryship Louis J. Reuter received 20 votes, A. F. J. Baur 35 votes and the latter was declared elected. W. J. Stewart was next called upon for his paper on "Closer Relationship Between the Commission Man, the Retailer and the Grower," which was read. On the motion of J. C. Vaughan, F. R. Pierson, August Poehlmann and the mover of the motion was appointed a committee to draw up resolutions on the death of the late L. E. Marquisee of Syracuse, N. Y. A few items from the question box were then disposed of and the meeting adjourned.

The visiting ladies were entertained at the Majestic theater performance Wednesday afternoon by the Ladies' Society of American Florists, Mesdames. Herr, Vesey, Dailledouze, Rasmussen, Maynard, Miss Meinhardt and Miss Crow attending. In the evening the ladies were the guests of the State Florists' Society at another theater party, with supper at the New Denison hotel, while the gentlemen enjoyed a lunch and smoker at the German house bowling alleys. An elaborate banquet was tendered the visitors at the Columbia club Thursday evening and a trolley car ride to Richmond was planned for Friday morning.

SUCKING PIG CLUB.

The annual dinner of the Sucking Pig club was held at the New Denison hotel Thursday afternoon, January 28. The members present included W. N. Rudd, J. A. Valentine, Geo. Asmus, Fred Meinhardt, Otto Koenig, W. W. Coles and Theo. Miller. Wm. F. Kasting was initiated, while Leonard Kill and E. Hauswirth were expelled.

NATIONAL FLOWER SHOW.

The executive committee of the National Flower Show met at the New Denison hotel January 28, those present being Wm. F. Kasting, J. C. Vaughan, J. A. Valentine, W. N. Rudd, Otto Koenig, August Poehlmann and Geo. Asmus. Final reports were received from the chairmen of the various sub-committees and an additional 10 per cent dividend declared on money actually paid in by guarantors.

President Patten's Address.

We have been already in Indianapolis long enough to learn that we are among indulgent friends. As eighteenth president I also extend to you a welcome and wish you all a prosperous and happy new

A. F. J. Baur, Indianapolis, Ind.
Secretary-Elect American Carnation Society.

year, and a successful convention on this our third visit to Indianapolis. The past year has been a trying one to the florists. The depression in business has laid a heavy hand on many, but the future looks bright. Let us be alert and ready to take advantage of the improvement in business.

J. S. Stuart, Anderson, Ind.
President State Florists' Association of Indiana.

Many new varieties of carnations have been introduced the past season; time will tell how many will prove worthy of perpetuation. Anyone sending out a new variety should exercise due care to have the stock healthy, cuttings good and well rooted. The carnation is still the popular flower and, as our society stands for the advancement of the carnation, continue it so. The raisers of new varieties have made marked improvement, but have not reached perfection yet. I think it is generally understood that this society does not necessarily endorse a variety as a profitable kind to grow commercially, because it has been successful in obtaining a prize.

At the National Flower Show at Chicago last November under the auspices of the Society of American Florists the interest in carnations was indeed manifested by the enthusiasm of the many visitors. This was probably the largest exhibition of carnations at a fall show ever held in the country, and was a credit to the exhibitors. As our conventions are held in different parts of the country, some members lose interest when the conventions are held at a distance and drop out. As our society creates an interest in the carnation and the proceedings at our meetings are quoted over the entire country, every florist receives the benefit to a certain extent, and ought in justice to the society to become a member, even if unable to attend.

CARNATIONS ON CONCRETE BENCHES

Some florists have been growing their carnations on concrete benches; it would be interesting if they would relate their experiences. It probably is economy to build of concrete if the plants do equally as well as on the wooden benches. Many growers have dispensed with the use of bone, and claim that their plants do just as well, if not better. Last year the experiment station at Washington devoted a lot of work to carnations, which was appreciated by all who had the privilege of visiting the greenhouses and listening to Dr. B. T. Galloway, chief of the bureau of plant industry. We might get more good from this bureau if we would try, for the officers are ready to work with us.

POT GROWN CARNATIONS.

What about having pot grown carnations at our exhibitions? This has been called to your attention by former presidents, but we don't seem to make much headway in the matter. I think it would be a good thing for the introducers of a new variety to have a well grown plant in a pot to show with the cut flowers. It certainly would be of interest to intending purchasers. Would it not be well to offer prizes for collections of three or more pot grown carnations, say $10, $6, $4. It would give more material to make an exhibition and tend to create more interest in the divine flower. Pot carnations years ago were quite a source of revenue to the florists.

At the convention of the S. A. F. at Niagara Falls, last August, the Carnation Society voted the sum of $25 to be sent as a premium to the Perpetual Flowering Carnation Society of England. I would suggest that the salary of the secretary be increased if possible. I hope all our members will wear a carnation in memory of the lamented President McKinley, on January 29.

I wish to thank you for the loyal support given me, especially the secretary, Albert M. Herr, the vice-president, A. F. J. Baur, and the directors. The press, which has been so friendly to us, is entitled to all the thanks we can give it. To the members of the local society for the arrangements and details of the exhibition, we are under obligations and grateful to each and every one.

Treasurer Dorner's Report.

The following is Treasurer Dorner's report:

RECEIPTS.

Balance January 24, 1908	$338.05
Cash from Secretary Herr	881.00
Cash from interest	113.07
	$1,332.12

EXPENDITURES.

Paid orders on treasurer	$1,104.54
January 25, 1909, cash on hand	227.58
	$1,332.12

PERMANENT FUND.

Amount reported January 24, 1908	$2,375.31

Secretary Herr's Report.

Your secretary begs leave to report having issued the report of our annual meeting in due time and having mailed the same to all members in good standing. On January 4, the premium list was issued and mailed to all members on our books; this list was made up as per instructions from your board of directors at a meeting held in Washington in January, 1908.

The usual effort was made to secure advertisements for this list by your secretary. A circular letter was sent to every member on our books and about 300 possible advertisers who were not members of the society; this was followed up by a personal letter to 100 or more whom your secretary thought should advertise with us. The result is $105 worth of advertising, not one-fifth enough for the work of solicitation necessary to get it and I again recommend that this part of our premium list be abolished.

An innovation this year was a request made to every member of this society to add to our Class B of named varieties any variety they might want to see inserted, providing they would pay the premiums if any were awarded. This was followed up by an appeal made through the trade papers and the result was one addition, that of Afterglow by R. Witterstaetter, Cincinnati, O. This meager response may have been due to this feature not being properly understood and partly owing to financial depression; at least it is to be hoped that we as individuals will have pride enough in our society to see that this part of our premium list is well filled another year.

Among our members we have 32 who have not paid their dues for 1908 and 41 new members, so that we are gradually gaining in membership, as the list will no doubt be increased considerably at this meeting. There were several deaths during the year but no notice being received by your secretary, no official announcement can be made.

I want to thank the president and vice-president for their assistance during the past year and beg pardon for the few errors that have occurred during the same period. I also want to thank every member of this society for their hearty co-operation during the 14 years I have served them as secretary, and bespeak for my successor the same helpful spirit from them.

This society has advanced the carnation and its methods of culture to somewhere near perfection; to continue its mission it must take up the work of popularizing the flower with the buying public, and, as far as possible, correct the evils and make improvements in the buying and selling end of the business.

We need a secretary who either has ample time of his own to devote to its affairs or sufficient clerical force to have them attend to all of the details between meetings and one to whom the salary is no object for the amount of work done. With me it has been a labor of love for 14 years, years which I can look back over with many pleasant memories and for which I feel amply repaid by the acquaintance of the men I have been working with, and that is all of you, for we have all worked together or we would not be where we are.

But a few years ago, as some of you know, I was bumped pretty hard financially, and as the hardest part of the work of this society extends from November 1, with the soliciting of advertisements, until some time in March with the sending out of the annual report without any intermission, right in my own busy season, it makes too much work for me (work that I could not possibly have given the attention I did had it not been for the kindly assistance of Mrs. Herr), and feeling that I cannot give this work the attention it should have I hereby tender my resignation to take effect at the end of our official year, April 1.

F. E. Dorner, Jr.

Treasurer American Carnation Society.

Producer, Wholesaler and Retailer.

BY WILLIAM J. STEWART.

The topic on which I have been asked to say a few words might easily furnish food for profitable discussion for the time of an entire convention. Briefly stated, I think all will agree that a closer accord and mutual understanding between the representatives of these three interests would greatly conduce to the advantage of the industry as a whole and every individual connected with commercial floriculture. We need not confine our consideration to the carnation industry alone; what we shall deduce applies equally to all. At the start we might ask ourselves, first—whether our industry is enjoying a reasonable prosperity, is or is not returning to those who labor in its various departments a fair recompense for the effort expended. If not, where shall we look for the cause and what can we apply as a remedy?

The business which is under consideration is one of recent development, rapidly increasing in importance and influence and now involving many direct and allied interests. It is not surprising that new phases hitherto unforeseen are constantly intruding themselves. We find in the ranks many who started when its problems were simple, its operations some-

MODERN METHODS NEEDED.

what primitive and its profits large in proportion to the investment. It is only natural that we should here encounter a sentiment reluctant to acknowledge that former conditions can never be restored and well-intrenched convictions with resultant prejudices as to the supposed causes contributing to present grievances. All this is inimical to the conciliatory, co-operative spirit which the interdependence of the different interests makes so desirable.

On the other hand the inherent prin-

Flesh Pink, Brighter Than Enchantress, Otherwise Like Winsor.

CARNATION PIERSON'S PINK NO. 50, ACTUAL SIZE.

ciple of progress demands that as our business assumes a magnitude which makes modern mercantile methods essential to its best success we should fit ourselves to so conduct it, regardless of any preconceived views and cherished prejudices which may stand in the way. According as we are willing to so fit ourselves and encourage the same in our auxiliaries will the foundations of our industry be strengthened, its dignity upheld and its permanency assured as an avocation universally respected and honored.

Looking at the commercial horticultural industry as comprising the three distinct divisions mentioned in the title of this paper we may state as a self-evident proposition that any interruption of the prosperity of one department must eventually react directly or indirectly on all the others, and the misfortune of one should therefore be the concern of all. Following out this thought a first requisite in the movement towards a better understanding and the benefits which may be expected to follow is the recognition by each department of the indispensability of the other.

"I care for nobody, no, not I,
If nobody cares for me"

is not the sort of sentiment that will bring either emolument or credit to either.

With the wholesale growers' first and greatest obligation—that of producing good and acceptable material—this paper does not concern itself. We shall assume that the grower is doing this part well and assent also to the proposition that, under conditions as they now exist, he has all he can attend to. If, however, the product is not well sold and the money well collected it matters little how well it may have been grown and so here we come to the problem which presses most urgently upon us today. When the production outstrips the demand then are the highest qualifications of the marketing forces put to the test. You growers who make up the bulk of the membership of this organization know something of the bitterness of disappointment as you have seen your product, under the slightest provocation of sunlight and crop, piled up unsold in the wholesale markets or condemned to the alternative of being proclaimed by a "hole-in-the-wall" shouter at "ten for a nickel," while perhaps you read in the trade papers of a scarcity and unsupplied demand a couple of hundred miles away. You are justified in asking "Can't this be helped? What is it that stands between the flower and the public?" But instead of asking of the wind or of your brother grower would it not be well to call in the other members of the family—the wholesaler and the retailer—and reason together? The subject is one which will tax the combined capabilities of all.

OBJECTS OF THE SOCIETY.

In the meeting for organization of this society at Philadelphia 18 years ago, among the objects of the organization as set forth by the committee on resolutions were the following: "To increase general interest in the cultivation and consumption of the carnation; to improve the methods of cultivation and the methods of placing it on the market; to increase its use as a decorative flower." Do the records of the society show that these two propositions have been followed up as of equal importance or that one has been allowed to overshadow the other?

Our worthy president in asking me to prepare this paper, writes, "You have been through the mill, so I think you might give us a few suggestions." Consulting the dictionary, I find the word "mill" defined as "a machine in which substances are ground"; "a prize fight." The president evidently had in mind my connection with the flower commission business in the long, long ago. From my observation I should say that the commission method of marketing flowers was still holding its own all right, although proof is not wanting to indicate that the sentiment among some of the best informed commission dealers seems to favor a system of direct outright purchases from the wholesale grower. In any event the vital interests of grower and wholesaler demand that the wholesale dealer should at all times have exact information from the grower as to crops present

VARIEGATED CARNATION BAY STATE, BY ARTHUR ROPER, TEWKSBURY, MASS.

Winner of American Carnation Society's Gold Medal at Indianapolis.

and prospective and a strict compliance with his wishes as to time and manner of shipment. It is the wholesaler's privilege and duty to concern himself in the matters which affect the welfare of his grower, advise him as to ways and means whereby he may increase his income, post him as to the movements and tendencies of the market as discerned by the man

CARNATION WHITE PERFECTION.

Growing at the Chicago Carnation Co.'s Establishment, Joliet, Ill.

at the front, keep the scouts busy and do something more than sell. If he is incapable of all this he may be "in the right church" but is certainly "in the wrong pew."

ALL DEPARTMENTS INTERDEPENDENT.

The grower should have from his wholesaler unquestioned assurance of financial responsibility. I sometimes think the growers as a class have been remarkably trusting and generous in this latter respect to salesmen of all kinds but whether it is good business is a different question and, as before intimated, hardly in harmony with accepted commercial practice which demands that the money from the sale of flowers should pass promptly from the consumer through the medium of retailer and wholesaler to the grower and with equal celerity from the latter to those who supply and serve him. In no respect are the various departments of the trade more closely interdependent and in none is reform more urgently needed than in this matter of credits and accountability.

As to the retailer he should never forget that the producer of the stock which he must have, if he is to continue in business, is entitled to a fair return and the means of placing his business in a position of honor and good repute. It is natural to want to buy as cheap as possible but the disposition to beat down wholesale values regardless of the possibilities of ruin and discouragement that may follow should be looked upon with disapproval by all well-wishers of the floral industry. In conclusion, let none of us be "content with knowledge sufficient for the present need." The business with which our fortunes are linked is only in course of development and to keep pace with its growth and its emergencies requires the best combined thought you can give to it. Mutual respect and mutual toleration are good qualities to cultivate. Our peace of mind, our business future and, last but not least, our pocket books, will all share in the prosperity following upon a wise discernment of the close relationship between producer, wholesaler and retailer.

Report of the Judges

CLASS A—VASES OF ONE HUNDRED BLOOMS.

White.—Strafford Flower Farms, Strafford, Pa., first with Lady Bountiful; the E. G. Hill Co., Richmond, Ind., second with White Enchantress.

Flesh pink, being those of a flesh or salmon color.—F. Dorner & Sons, Co., Lafayette, Ind., first, with Pink Delight; Chicago Carnation Co., Joliet, Ill., second, with Enchantress.

Light pink, being those lighter shades, lighter than Lawson.—F. Dorner & Sons Co., first, with Winona; A. C. Brown, Springfield, Ill., with Sangamon.

Dark pink, deeper than Lawson.—E. G. Hill Co., first, with Afterglow; R. Witterstaetter, Cincinnati, O., second, with Afterglow.

Red or carmine, including all shades that cannot be classed as scarlet or cardinal.—Bassett & Washburn, Chicago, first, with O. P. Bassett; Chicago Carnation Co. second, with Beacon.

Scarlet or cardinal.—F. R. Pierson Co., Tarrytown on Hudson, N. Y., first, with Victory; E. G. Hill Co., second.

Maroon, covering shades not known, as crimson.—F. R. Pierson Co. first, with Seedling No. 60; W. W. Coles, Kokomo, Ind., second, with Mrs. W. W. Coles.

Yellow or yellow variegated.—Bertermann Bros. Co., Indianapolis, first, with J. Whitcomb Riley.

Any other color.—H. Weber & Sons Co., Oakland, Md., first, with Toreador.

CLASS B—VASES OF FIFTY BLOOMS.

White Enchantress.—Chicago Carnation Co., first; E. G. Hill Co., second.

White Perfection.—Baur & Smith, Indianapolis, first; Chicago Carnation Co., second.

Any other white.—E. G. Hill Co., first; H. Weber & Sons Co., second.

Enchantress.—Manke Bros., North Milwaukee, Wis., first; Chicago Carnation Co., second.

Any other flesh pink.—Chicago Carnation Co., first, with Melody; W. J. & M. S. Vesey, Fort Wayne, Ind., second, with Pink Lawson.

Winsor.—Chicago Carnation Co., first; Pittsburg Rose & Carnation Co., second.

Welcome.—Chicago Carnation Co., first.

Rose Pink Enchantress.—F. Dorner & Sons Co., first; Weiland & Olinger, New Castle, Ind., second.

Afterglow.—E. G. Hill Co., first; Chicago Carnation Co., second.

Any other light pink.—E. G. Hill Co., first, with Winona; F. Dorner & Sons Co., second, with Winona.

Lawson.—Manke Bros., first; W. J. & M. S. Vesey, second.

Aristocrat.—F. Dorner & Sons Co., first; Chicago Carnation Co., second.

Any other dark pink.—Baur & Smith, first, with Pink Imperial; Chicago Carnation Co., second, with Lawson-Enchantress.

Red Chief.—F. Dorner & Sons Co., first.

Victory—Weiland & Olinger, first; W. J. & M. S. Vesey, second.

Beacon.—Chicago Carnation Co., first; E. G. Hill Co., second.

Any other scarlet.—Chicago Carnation Co., first, with Andrew Carnegie.

M. A. Patten.—A. C. Brown, first; Weiland & Olinger, second.

THE SOCIETY'S MEDALS.

Gold medal for the best vase of 100 blooms, any variety, any color.—Albert Roper, Tewksbury, Mass., with Bay State.

Silver medal for the second best vase.—Dailledouze Bros., Brooklyn, N. Y., with Seedling No. 404.

Bronze medal for the third best vase.—Bassett & Washburn, with O. P. Bassett.

SOCIETY OF AMERICAN FLORISTS MEDALS.

Silver medal for the best vase of 50 blooms of an American-raised variety not yet disseminated.—A. C. Brown, with Superba.

Bronze medal for the second best vase.—Albert Roper, with Bay State.

SPECIAL PRIZES.

The $25 silver cup offered by A. Wiegand & Son, Indianapolis, for the best vase of 100 blooms, one or more varieties, quality, arrangement and general effect to be equally considered, was won by Bertermann Bros.,

The $50 silver cup offered by the State Florists' Association of Indiana for the best vase of 200 blooms in five or more varieties, arrangement and general effect to be considered, was won by the E. G. Hill Co.

Bertermann Bros. Co.'s sweepstake prize of $40 for first, $30 for second, $20 for third and $10 for fourth best vase in Class A for 100 blooms.—E. G. Hill Co., first, with Afterglow; Bassett & Washburn, second, with O. P. Bassett; F. R. Pierson Co., third, with Victory; Stafford Flower Farms, fourth, with Lady Bountiful.

The Indiana Floral Festival Association's prize of $25 in gold for the best vase of 100 blooms, one variety, grown in the state of Indiana, was won by the E. G. Hill Co., with Afterglow.

The $10 prize offered by H. W. Field, Northampton, Mass., for the best vase of 50 blooms of President Seelye, was won by the F. R. Pierson Co.

CERTIFICATES OF MERIT.

The following points were awarded to the respective varieties, 85 points being necessary to secure the certificate of merit:

Shasta, exhibited by Baur & Smith, 89 points.

J. Whitcomb Riley, exhibited by Bertermann Bros., 86 points.

Sangamon, exhibited by A. C. Brown, 85 points.

Sport of White Lawson, exhibited by A. C. Brown, 75 points.

Lucille, exhibited by the Highland Park Greenhouses, Highland Park, Ill., 68 points.

CARNATION ROSE PINK ENCHANTRESS.

Growing at the Chicago Carnation Co.'s Establishment, Joliet Ill.

CARNATION MARCHIONESS, SHOWING THE GROWING PLANTS.

Georgia, exhibited by J. D. Cockcroft, Northport, L. I., N. Y., 75 points.

Dark Sport of Winsor, exhibited by F. R. Pierson Co., 85 points.

Seedling No. 60, exhibited by F. R. Pierson Co., 85 points.

Seedling No. 30, exhibited by F. R. Pierson Co., 86 points.

Seedling No. 108, exhibited by N. Zwiefel, North Milwaukee, Wis., 86 points.

Seedling No. 50, exhibited by F. R. Pierson Co., 78 points.

Seedling No. 7506, exhibited by F. Dorner & Sons Co., 90 points.

Governor Deneen, exhibited by A. C. Brown, 82 points.

Superba, exhibited by A. C. Brown, 88 points.

PRELIMINARY CERTIFICATES.

To be competed for by two-year-old seedlings, 12 blooms or more to be shown:

Mrs. Walter W. Coles, exhibited by W. W. Coles, 82 points.

Admiration, exhibited by the Chas. Knopf Floral Co., Richmond, Ind., 85 points.

Seedling No. 511, exhibited by the E. G. Hill Co., 87 points.

Seedling No. 280, exhibited by A. C. Brown, 75 points.

Seedling No. 228, exhibited by N. Zwiefel, 81 points.

Seedling No. 406, exhibited by the E. G. Hill Co., 88 points.

Seedling No. 235, exhibited by the E. G. Hill Co., 85 points.

Convention Notes.

Mrs. Albert M. Herr has rendered her husband much valued assistance during his 14 years incumbency as secretary.

CARNATION RUBY.

J. Whitcomb Riley was among the missing but had a good representative in the fine new yellow carnation which Bertermann Bros. have named after him.

J. D. Carmody was much inquired about but will doubtless have much that is interesting to tell us about the fair ones of Mexico, later.

The secretary stated that some 40 names have been added to the membership this year, about 25 at the Indianapolis meeting.

The Pennsylvania railroad will not tolerate the innocent game of solitaire in its smoking compartments—remember that.

The closing of the race tracks seems to have had a baneful influence even on the sweepstake in flower shows.

Bertermann Bros. received an order from England for 5,000 J. Whitcomb Riley during the convention.

Hoosier hospitality is unbounded, particularly where the ladies are concerned.

Albert M. Herr was elected president by standing vote.

Phil Foley was among the absentees.

THE CARNATION.

JAMES D. COCKCROFT of Northport, N. Y., was one of the passengers in the ill-fated steamship, Republic. He had, says the Chicago Tribune, a couple of little electric dark lanterns in his valise. He used them to such good purpose that he found his money and a ring which had been tossed to the floor. Other passengers lighted candles and by the use of the dim light found their pocketbooks and jewel bags. Others, in the few minutes they had, struck matches, and in the flickers of light gathered up their most valuable trinkets.

Carnation May Day.

The illustration of May Day on page 10 gives a good idea of its fine build and handsome petalage while its other good qualities include an exquisite shade of satin pink, the flowers have a fine stem, strong calyx, and it is one of the most free growing and prolific flowering varieties in cultivation, from 20 to 24 flowering shoots being found on a plant. It is also a splendid keeper and shipper and is always anxiously sought by the trade. This fine variety was raised, and has been grown for the last three years by E. T. Grave of Richmond, Ind., and is being disseminated this season by him and the E. G. Hill Co. There is no doubt it will meet with a good reception from growers and become a very popular variety on account of its many good points.

Carnation Dorothy Gordon.

The carnation figured on page 8, Dorothy Gordon, is a cross between Lawson and Enchantress and was raised and is being grown by Joseph Heacock Co., Wyncote, Pa. The house figured was planted in August of last year and the photograph was taken in November, the plants being one foot apart in the rows. It can be easily seen what a strong grower it is and Messrs. Heacock say it is the healthiest and most productive variety they have ever handled. The flowers are uniformly good, about three inches in diameter and they sold around the recent holidays at $12 per 100. The color is similar to that of Rose Pink Enchantress. The stock at Wyncote consists of 6,000 plants all in the best of condition. It was awarded a certificate of merit at the Washington meeting of the American Carnation Society last year, scoring 86 points. The firm has not decided yet, but may disseminate Dorothy Gordon in the spring of 1910.

Carnation Cuttings Unsatisfactory.

ED. AMERICAN FLORIST:—

I have put some carnation cuttings in the ground in my greenhouse and the last three weeks rusty brown spots have appeared on them. Please tell me what to do with them.

Ohio. L.

There are several carnation diseases which produce brown spots on the foliage. Probably the disease in question is the rust which can be readily distinguished from other diseases by the spots being considerably raised above the surface of the leaves and by their containing a brown powder which will adhere to the fingers when rubbed over them. The carnation rust is a disease which at one time did great damage, but since we have learned to control it, it is no longer much feared.

The proper method of treatment is to keep the air in the houses as dry as possible and to keep the houses well ventilated. When absolutely necessary to syringe, the work should be done on a bright day early in the morning so that the foliage will be thoroughly dry before night. Syringing with Bordeaux mixture, sulphide of potassium, or, in fact, any of the sulphur fungicides, together with the treatment mentioned above, should very soon rid the plants of the trouble. The Bordeaux mixture can be bought in paste form with instructions for applying it, and as it is beneficial in nearly all the diseases of the plant caused by fungi, it is a good thing to use. It discolors the foliage somewhat, temporarily, and must not be allowed to touch the flowers. The sulphide of potassium, often called liver of sulphur, can be obtained at any drug store and is very simple to use and quite effective. Two ounces of this substance dissolved in an ordinary bucket of rain water and syringed on the foliage is generally strong enough.

If the plants are badly affected the application must be repeated every few days for some weeks. Of course no application will remove the spots when they have once formed and the affected foliage will always be marked. The use of the fungicide is to kill the spores—the little brown powder before mentioned—and prevent further infection of the plant. The pulling off and burning of the worst infected leaves is always advisable. "L" should understand that in all cases of plant disease careful attention to watering, ventilation and temperature is the main thing and no amount of fungicide will produce good results or cure disease when the growing conditions are not right.

CHRYSANTHEMUMS

Private Shows and Varieties.

Those giving chrysanthemum shows annually and inviting their patrons and friends, should not lose sight of the fact that it is the great diversity in color and form which nature has bestowed upon the chrysanthemum which makes it first and foremost as an exhibition flower. In preparing for next fall's display do not be confined to strictly commercial varieties. A few massive exhibition blooms of the highest quality, sprays of pompons, singles and anemone pompons and a few of the odd and curious forms like the large anemones and hairy varieties, in fact any kinds that are peculiarly striking, are of the greatest interest to the public. Your patrons are doting on this trip to the greenhouse or store as one of the pleasant occasions of the season, so do not let curtailment in variety impair your display. A few well grown flowers of Yellow Eaton displayed with the pompon, Baby, may be arranged in same vase, or separately if in close proximity, and labeled "the big and little of it."

Grow the single chrysanthemum Indicum (Golden chain) which will reach six to eight feet and have a few Mizpah or some of the newer ones which do not exceed 12 inches in height to represent the long and short of the family or a few sprays of Indicum labeled, "As nature made me," and a vase of the best exhibition sorts. "As man has made me." This will lead up to conversation on hybridization and, if not conversant on the subject, get posted before hand. All such displays are of intense interest to the public. Twenty-five varieties of the kinds referred to judiciously selected and well grown will add greatly to the effectiveness of Mr. Forethought's next show. It is true the sales of these odd varieties may not in themselves give immediate returns to warrant the outlay. The chief motive for such exhibitions should be to please the visiting public, and if this is done to their entire satisfaction the remunerative end of the game will surely manifest itself—it not today—tomorrow.

It may not be out of place to make a few comments and recapitulations of the Chrysanthemum Review for 1908 as presented by your New York contemporary January 16. These reports are of great interest to those who keep their fingers on the pulse of the trade. While many other varieties no doubt reach the markets of this country, this report by the 26 cities shows the most popular kinds grown in quantity. It mentions some 120 varieties of which 40 are white, 39 yellow, 30 pink, 8 red and bronze. To ascertain the most prominent of these it is necessary to find how often these varieties are mentioned in the reports of the 26 cities and considering only those which are mentioned 10 or more times we find eight white appear as follows: Geo. S. Kalb, 10, October Frost, 13, Mlle. Jeanne Nonin, 14, Miss Alice Byron, 15, Timothy Eaton, 17, Polly Rose and W. H. Chadwick, 18, Ivory, 19. Of the 39 yellows six were mentioned over 10 times and are Golden Glow, 11, Golden Chadwick, 12, Monrovia and Golden Wedding, 14, Robert Halliday, 15, and Major Bonnaffon, 19. Only three of the 30 pinks stood the test, Maud Dean, 14, Dr. Enguehard, 15, Glory of Pacific, 19.

These figures may not be absolutely accurate but they are near enough to show those varieties which are looked upon as being best for the commercial grower. This summary also endorses the opinion of the writer as to the merits of American sorts for this purpose. Out of the 17 thus approved, 13 are of American origin. We predict several varieties which were not prominent in the review will be strong factors in the 1909 report.

There are several varieties which were not as conspicuous as they deserve, namely Golden Eagle, Crocus, Pacific Supreme, White Cloud and Henry Sinclair. The first four are comparatively new but the last mentioned was sent out by John N. May in 1903, and it has always been a mystery to us why it is not better known. It is a very nice yellow of a medium shade, ready October 25, with fine stem and foliage and dwarf habit. There is yet time for it to come into general favor.

The three most prominent varieties are Ivory sent out by H. Waterer and raised by W. K. Harris in 1889, Major Bonnaffon raised and disseminated by F. Dorner & Son in 1894, and Glory of Pacific, a California seedling by H. Yashiike who was also the disseminator in 1895, although we believe the E. G. Hill Co.'s efforts, a year or so later, were more effective in its introduction than those of the originator. We notice one of the reports says Dr. Enguehard is not worth growing and yet 15 others include it as one of the good kinds. It looks as though it was up to our genial friend Gillett to tell us what grudge he has against the doctor.

Flowers Decreasing in Size.

ED. AMERICAN FLORIST:—

As the chrysanthemum season is over we would appreciate it if some of your readers could tell us why the size of our chrysanthemums decreased. Does it make any difference whether they are planted in raised benches or in well drained solid beds? We had the same varieties such as Mrs. Robinson, T. Eaton, Alice Byron, W. H. Chadwick and Bonnaffon in raised benches four seasons ago and had fine blooms and with the same treatment in solid benches for the last three seasons have lost considerable in size, only a small percentage giving good blooms. We are growing one and two to the plant about eight inches each way, the soil is sandy, well drained and in proper condition in our estimation. The foliage was of healthy appearance, rich, but not overfed, but the blooms did not come to their former size, the later ones remaining particularly small with the inner petals opening very slowly; the night temperature has been 40° to 50°, somewhat higher during the day; they were housed about September 1. They were also well ventilated night and day. The only reason we can think of is the solid benches and we are contemplating raising the same for the

CARNATION DOROTHY GORDON.
Growing at the Joseph Heacock Co.'s Establishment, Wyncote, Pa.

next season. If you could give us some advice through your columns you would greatly oblige

F. B.

We have never used solid beds for chrysanthemums and hence cannot advise "F. B." from our own experience. Those we have seen growing under such conditions have not been up to the standard either in size or finish. When the roots are allowed full freedom and ramble through the soil the results are not as satisfactory as where they are confined to a limited space. It is for this reason that many growing for exhibition, firm the soil so thoroughly, and others divide the benches in small compartments to prevent undue expansion of the roots. Sandy soil can scarcely be made too firm. We would also suggest housing or planting earlier than September 1. If lifted from the open or grown in pots outside would perfer them benched by August 1 in as shallow soil as permissible, so that the roots will penetrate all parts before the buds are formed. If the stock is grown in pots outside and September 1 is as early as it can be housed, we would prefer to plunge, rather than remove the pots. Under such conditions the plants would be established at once and be in better condition to receive liquid foods.

ELMER D. SMITH.

Growing Cinerarias.

ED AMERICAN FLORIST:—

As I am inexperienced in cineraria growing kindly tell me should they be disbudded, how often to feed, with what, and should they be watered overhead? Mine look all right only once in a while some hang their heads and wilt very badly. Is this caused by draft or too much heat? They are in a house with no heat, about 30° to 40° at night, 60° to 80° by day. Quite a few leaves get spotted and rot. Should the glass be shaded real heavy when blooming to preserve color?

California. C. F. G.

Disbudding is unnecessary with ordianary plants. Specialists who grow the very large flowered highly bred varieties for exhibition thin the flowers a little with grape scissors to insure the largest flowers it is possible to get. Feeding is only necessary when the plants are well rooted and established in their flowering pots when it may be given. Any good commercial fertilizer will do for them and if changed occasionally to soot water this will help the foliage. Understand though that in no case is feeding beneficial unless the plants have a firm hold on their compost and are healthy. Light dewings overhead are beneficial during bright warm weather but heavy overhead waterings are dangerous, ruining the foliage and flowers. Never spray at all after the flower heads are well up and showing any color. The wilting you speak of is probably caused by a lack of air and too much heat though as you say the house goes to 30° at night probably some of the plants have been frozen. Plants frozen never regain their proper stiffness though others wilted from heat or lack of air may do so. The proper treatment for these plants is a constantly cool and moderately moist atmosphere with abundance of air at all times. In your climate shading may be necessary even at this early date. Later it certainly will be. Shade at any time if the sun causes the leaves to wilt.

HARDY HERBACEOUS PERENNIALS.

Plants That Bloom First Year From Seeds.

Now that florists' and seedmen's catalogues are rapidly coming to hand and are being eagerly scanned over and lists of spring requirements jotted down it may be interesting to many who do a small jobbing trade in hardy plants to know that a large number of them bloom the first year from seed if sown early and kept on growing without serious check. One of the best batches of Stokesia cyanea I ever saw was grown from seed sown in a greenhouse in January and then once pricked off into flats and from these transplanted into the open ground as soon as warm weather permitted. From the latter part of July until severe freezing weather in late November, these made the most conspicuous bed of hardy plants I ever saw in the fall. Hardy asters of the Novæ Anglæ type are especially showy and interesting in the late fall months from plants raised from seed sown in a cold frame in late March or early April and sash placed over them until germination takes place when they may be taken from these beds and transplanted to another frame an inch or so apart. Or they may, when large enough, be placed where they are required to bloom and if kept free and clean from weeds and thoroughly cultivated they grow much stronger and bloom much later than those grown from clumps or divisions. This type of aster I have frequently noticed grown in a wild state in pasture lands and blooming beautifully in November, but in a very much dwarfed condition owing to its having been cut down very closely during haying time. Here a lesson might be learned from an observant mind that if similar treatment were accorded to many of our early fall flowering plants we might very much prolong their blooming period.

Digitalis ambigua (grandiflora); Dianthus latifolius and its varieties. Erigeron Mexicanus and Erigeron Villarsii; the various fall flowering heleniums; Pyrethrum ulignosum leucanthemum Nipponicum; Linum perenne and L. Austriacum; the various hardy lobelias as L. cardinalis, L. Rivourei, L. syphilitica and the red leaved L. Queen Victoria; Lychnis Haageana, L. fulgens and L. Sieboldi. The various malvas of the moschata type, platycodons in variety, Rudbeckia hirta and H. fulgida Delphinum formosum, D. elatum, D. hybridum, D. Chinense and Chinense album, all do exceedingly well and bloom profusely, wonderfully extending the blooming season. If this fact was more generally recognized or known our hardy borders would not show so many bare spots in late fall as they do now.

The above plants have all flowered very profusely with me under ordinary treatment and the following list has also bloomed more or less profusely according to season; Alstrœmeria Chiliensis, sown early in open ground and left undisturbed until dug for winter protection as this

is not altogether reliably hardy; the same remark applies to Valeriana coccinea, V. alba and platycodons. If the latter are given good attention and well protected against freezings and thawings they will prove satisfactorily hardy. Anchusa angustifolia makes a rapid growth sown outside in nursery rows and blooms very freely; the same may be said of Lupinus perennis and several others whilst the following campanulas left standing until fall when they all make nice stock for potting for spring sales. The largest may even be selected with good success for fall or very early spring sales. No doubt there may be many others that will bloom the first season from seed as for instance, Gaillardia grandiflora, but the above list all bloomed as indicated with the writer in one season.

HERBERT GREENSMITH.

CARNATION MAY DAY.

Raised by E. T. Grave, Richmond, Ind. Rose Pink.

THE RETAIL TRADE

A CLEAN and well arranged window, with fresh stock well displayed and frequently changed, is the best drummer a retailer can have.

THE Japanese air plant has proved a good seller but the line of talk handed out by some retailers as to its "growing without water," etc., probably deceives only a very few.

DESIGNS of fraternal order emblems usually look best when the pattern is of one color and picked out around the edge with another, or white. They are also best shown on easels in a general way.

THE retailers of Lowell, Mass., are having a lively time over Sunday closing. We shall probably soon get down to the level of the English borough where a tobacconist, for more years than we care to remember, has come up on Monday, paid his five-shilling fine and laughed in his sleeve at his law-abiding competitors who lose the lucrative Sunday business.

Retailers Profit on Cut Flowers.

A paper read by O. J. Olson before the Minnesota State Florists' Association at St. Paul, January 19.

When I gave Mr. Dysinger the title of the subject which I promised to read tonight, I did so on the spur of the moment, and before I had given it any thought whatever. When I realized what a job I had imposed upon myself, it was too late to change my subject as the notices of our meeting had already been mailed, but having put my foot into it, I will try to give my views of the matter as fully as I can. The retailer's profit in flowers does not convey what I really had in mind to say. What the retailer's legitimate profit ought to be, was

have bloomed with me the first year from seed sown in the greenhouse late in January pricked off into boxes and transplanted to nursery rows or beds: C. Carpatica, C. cæspitosa, C. rhomboidea and C. elegante; Dianthus plumosus and D. Scoticus have bloomed sparingly and some of the largest flowers of Chrysanthemum maximum type I ever grew were from early sown seed treated as described above. This was still blooming when severe wintry weather cut them off; Eupatorium serotinum, E. cannabinum as well as Kuhnia eupatorioides, a near relation of the above, also flowered profusely, and a beautiful form sent out by V. Lemoine some years ago as E. Kirilowi from central Asia. This was a neat growing, attractive plant devoid of the coarseness usually possessed by this family but too tender for our climate though flowering freely from spring-sown seed. Pentstemon gentianoides and P. pulchellus, Saponaria Caucasica fl. pl. Verbena montana and various veronicas also do exceedingly well and flower freely from early greenhouse sown seed. Catananche bicolor and C. coerulea, Althea ficifolia and A. Narbonense, Cedronella cana, Asclepias tuberosa the various hardy asters; Galega officinalis and its white variety Hibiscus moscheutos, H. militaris Heliopsis Pitcheriana, Heliopsis lævis, Myosotis palustrus semperflorens, Salvia azurea and Callirrhoe involucrata all flower from seed sown even in nursery rows in late March or early April and

CARNATION LUCILLE.

Originated at Highland Park Greenhouses, Highland Park, Ill.

what I wanted to say, and I will make an effort to impart to you my ideas of the subject, in part, as well as I know how.

Very few of us are realizing as much out of the flower business as we should, compared with others engaged in other lines of business who haven't the risks of perishable goods and the worries and trials the average florist has to contend with. Every necessity as well as luxury has advanced, and in some instances, nearly doubled in cost in the past few years, and still I cannot see where there has been any advance in the selling price of cut flowers, commensurate with the constant improvement in the quality of our flowers today.

INCREASED WORKING COSTS.

To make my meaning plain, I maintain that we are selling a better grade of flowers now for the same money and in some instances for less, even than we did formerly when goods in daily use outside of our line, were sold for anywhere from 25 to 50 per cent less than they are now. In other words, we are not keeping up with the times, and reaping the benefits of good times, if I may put it that way. We have the increased cost of labor, the employe who is demanding more wages, and justly so, as I believe there is no trade where help is so poorly paid, when we take into consideration the long hours and experience required in first-class help. Of course, we get help that isn't worth any more than they are paid, and sometimes not that, but what I mean is the intelligent and capable kind whom you can give instructions to and feel that whatever is to be done will be done right without the need of worry on your part. We hear of very few employes who are considered capable and competent, either here or elsewhere, who receive more than $20-$25, and lots of them $12-$15 per week, and not for six days' work either, but generally seven, while help in other lines of trade, which requires no more experience and no more intelligence, and who would never think of putting in the time that the florists' business demands are much better paid. This is one of the reasons why first-class help is so scarce in our business. We have the biggest risk of any business that I know of. We all know that one who is careful not to carry a heavy stock, and has a good trade for it, does not run the risk that one who stocks up big in anticipation does. But you have to have the goods to show to do business with when there is business in sight, and it is he that will get to the top first, usually, but calculations in this line do not always turn out right.

MANY RISKS.

There are other risks in handling our goods which are at times beyond our control, all of which help to reduce profits, among which I might mention freezing, bruising and delays in delivering, in which the result is usually a refund to the customer. This, also, calls to mind that in hardly any other business that I know of, does one have to be as prompt and punctual as we have to be. Take for instance a customer who has a party and wants a centerpiece at a certain hour; it won't do to deliver it the day before, or at your convenience, if it is wanted for a stated time. But is must be there at five or six o'clock, or as the customer directs, or you will have trouble on your hands. And, usually, such work comes in bunches and cannot be taken off shelves or counters, and started out, for it requires both time and care to put up flowers in the way people expect nowadays.

NEW CARNATION GEORGIA.

Introduced by James D. Cockeroft, Northport, N. Y.

THE MATTER OF BOXES.

Another item of expense that helps to make profit smaller than formerly, is the manner in which flowers have to be packed and sent out. The boxes cost considerably more than those we used to use in times past. It seems that every customer expects a box, and a fine one at that, no matter how small a purchase he makes. Then we have the lodges who are always after advertising and other favors, who occasionally buy a design, but mostly want about a dollar's worth for 50 cents, for a sick member, delivered in the outskirts of the city, and I have felt lots of times that I would rather give them the purchase without charge than spend the carfare and time delivering them. And then they actually think they are making you rich. We have tried to get away from this, but the best way out of it, it seems to me, would be for us to get together and stick to an agreed policy in dealing with them, and thereby, educate people to the fact that it costs good money to grow flowers and handle them. If some policy of this sort was adhered to by the trade in general, it would add a great deal of diginity to our business and we would be in a better position to make enough profit out of it to make us all happy, and some day ride in automobiles of our own, and be as independent as we see so many others, engaged in other lines of business, are.

I have not mentioned the growers or the wholesale end, but it seems good reason to say that, if the retailers can make more profit than the growers can; also get more for their stock, they should lend their efforts by all fair means to this end. The day may still be far off when dreams of this kind are realized, but I prophesy that it will come when some of us, at least, will enjoy the fruits of our efforts, but not until we make up our minds not to be satisfied with enough profit to squeeze out a meager living and continue in the same rut for the rest of our days. I feel that I am not competent to illustrate the subject and I also plead lack of time for thought to do it justice. I know that there are innumerable other arguments that could be made in support of my contention, but I trust that you will understand my aim is for progress in our business and raising it to a higher standard with enough added profit to enable us to lay away something for a rainy day, at least.

Ice Box Cooling Machine.

ED. AMERICAN FLORIST:—

We are contemplating the erection of two ice boxes in our store, the dimensions of the boxes being 3x9x8 and 5x8x7 feet respectively, to be equipped with an ice machine. We wish some reader would enlighten us on the practicability of such

cooling machines, and what would be the proper temperature of a flower store ice box.

K. F. C.

Replying to "K. F. C." in regard to refrigerating machine, a 1-ton machine should keep the temperature of the proposed boxes at 45° to 52°, which, in my opinion, is right for a flower store box. This machine with storage brine tanks or pans would only have to run four to eight hours out of the 24 with direct expansion. The Brunswick Refrigerating Co., New Brunswick, N. J., puts out the most of the small machines and I think would be glad to furnish estimate and plans.

F. BURKI.

CARNATION CONQUEST, FORMERLY SEEDLING NO. 500.
Growing at the Chicago Carnation Co.'s Establishment, Joliet, Ill.

January Flowers in the New York Stores.

We have grown so accustomed to seeing good plants and flowers about the stores, and tasteful arrangement and decoration is now so common that we are in danger of overlooking some of the good and attractive features of the trade. If there is at the present time, as some claim, a lack of interest on the part of the public in fine horticultural features, we believe that it is but temporary and that soon again the lovers of Flora will return to their own. One is forcibly impressed with the great variety of stock, even in this season of long nights and cloudy days. Orchids are now plentiful and are being well used by the decorators. In some stores, large plants of flowering cattleyas are distributed in a large show window with a plain background of foliage plants, the effect being natural and pleasing. In other instances the plants are placed in moss-covered pots and suspended from the top of the window. A feature of a Broadway store window is a square metal pan with cord or strong ribbon attached to the four corners, and suspended from the top of the window to within two feet of the bottom. The pan is filled with a variety of short stemmed cut flowers; smilax is twined around the cords or ribbon and glasses of cattleyas are attached, one above the other, the result being a fine decoration, almost the entire height of the window. In the sides or wings, glasses of yellow narcissus are arranged in tiers similar to the orchids in the centerpiece.

While an occasional bunch of American Beauty or tea roses is seen in a window decoration for obvious reasons, their use for this purpose is not general. It must be added, however, that the ice-boxes of all well equipped stores show a fine variety of rose stock. Of the pink roses, Killarney is now leading. There are favorable comments heard on both My Maryland and Mrs. Jardine, but there are too few of both on view to form an opinion as to their ultimate future. A feature of the retail stores that cannot be overlooked, is the great bunches of forsythia, flowering quince, almond and deutzia. All these of themselves, when shown in large bunches, make with but few accessories very acceptable and striking decorations.

We have so many good carnations that it may be, as with other good things, we are too much inclined to take them as a matter of course. There is now an abundance of standard varieties and so far as this market is concerned, we think it no injustice to state that the Fisher carnations, meaning Enchantress, its sports and Beacon are at the head of the procession. There are other carnations that are very good and of these Winsor, Victory, Afterglow and White Perfection among others, are all worthy of a place among standard flowers but none of them have attained the widespread popularity that has attended the productions of Peter Fisher. It sometimes appears as though the increase in orchid, rose and gardenia culture and the great advancements in forcing stock, were putting carnations somewhat in the shade, but as a flower for the plain people the carnation is so well established that there need be little fear as to its future.

The winter-flowering sweet peas are now showing good points and must be classed as a staple. The sweet pea can be used in a number of attractive forms and like others of the less pretentious blossoms, it has a well established place in the affections of the public. The growers who make forcing a specialty have got their business to a stage where they can supply lilies and lily of the valley in constant succession. An excellent quality of both stocks is now seen. Within the past few weeks a fair supply of L. rubrum has been seen. While these flowers are not so useful as the white lilies they are novel and attractive and can be used with fine decorative effect. There is an abundance of good lilac and the sight of it is pleasing to the eye, for though blizzards may rage, the sight of a flowering plant or a bunch of lilac, somehow brings up thoughts of sunshine and balmy days.

The tulips, Trumpet Major and Paper White narcissi and hyacinths are now reasonably plentiful and all are to a considerable extent being used in decorative work, though the hyacinth is most useful in funeral work. Freesias are also to be seen, though the best stock is not yet arriving. An excellent quality of mignonette may now be had. There is room for doubt as to whether this stock is as popular as it once was, but there is likely to always be a fair demand for it. Both marguerites and yellow daisies are in considerable quantity, and these are stocks, which if they are not in the aristocratic circle of the flowers, have a never-waning popularity. It goes without saying that there are plenty of violets and many of them are sold. Like the daisies, but to a much greater extent, the violet has a large place in the affections of the people; its popularity may wax and wane but it will always be in the trade.

CARNATION WHITE ENCHANTRESS.
Growing at the Chicago Carnation Co.'s Establishment, Joliet, Ill.

THE VIOLET.

WHITE violets generally like a rather higher temperature than the dark varieties.

KEEP a sharp lookout for the first signs of black fly and fumigate directly it is seen, first gathering all the flowers that are fit.

A NEW single variety exhibited by Chas. A. Black, Hightstown, N. J., at a meeting of the State Horticultural Society, January 7, is very highly spoken of.

Notes from Rhinebeck.

The time is rapidly approaching for the violet to come at its natural season, and it is wise for the grower to be on his guard. The first and main outlook is to see that the plants are kept clean, removing all matured and decayed leaves and watching the temperature. Keep this as near to 40° as possible nights on sunny days; let it run up to 52° with as much ventilation as possible on cloudy or stormy days; keep it at 48° with air on, as it does not pay to force them, as the flowers will come small. When watering it is best to run it in between the plants, but an occasional spraying on clear days is good for the foliage, as washing the leaves will keep down red spider. Shading will be necessary shortly as soon as the sun gets a little stronger.

Cuttings are best made in February, with new small runners coming from the main plant. Regarding feeding the plants at this time of the year I do not believe in it as it is too late to do any good.

Rhinebeck, N. Y. G.

Notes in Season.

At any time now, propagation, by means of the small side shoots that appear around the double violets, may commence. These shoots may be broken off and made into short stubby cuttings, the best place to strike them being on a bench in quite a cool house. These will make fine stock for indoor culture, being first pricked off into flats or on other benches and later planted in the flowering quarters. This treatment is not usually necessary for single varieties. These are freer growing, and ample stock can be kept up by division in the usual way. But it is a good system to follow should it be necessary to work up stock of any particular variety or novelty and nothing is lost by it as it is necessary to take the shoots off anyway. Being small and clean, disease and insects are less likely to be propagated this way than by division.

With the increasing light the flowers will be coming larger and more freely and a little fertilizer will be of advantage. Heavy feeding is not necessary but some good, quick acting manure that will prevent the system of the plants from running down and the production of small poorly colored flowers should be used. With regard to change good guano, soot water and sulphate of ammonia and superphosphate mixed has proven so good that we use no other, but there are doubtless plenty of the proprietary fertilizers equally as good and safer to use in the hands of inexperienced growers if the makers' directions are followed out.

Water can be much more freely supplied with the increasing light. We by no means advise a soaked condition of the beds, but they may be run considerably wetter now than they have been during the depth of winter. The removal of dead leaves and an occasional stirring of the soil are among the necessary cultural details, and it is still good policy to keep all runners pinched or cut back, to throw all the strength of the plants into the flowering crowns. Air must be freely admitted on all possible occasions. We have no faith in the idea that night air is not good for violets. There is no difference in night and day air when the temperature and atmospheric conditions are the same and there are foggy, damp days, when one would like, if possible, to keep the air out of the houses. The air is invigorating and hardens the constitution of the plants and these are never satisfactory in a house tightly closed at night. Spraying for spider and care in the destruction of other insects must be continued as advised in former notes.

PIERSON'S PINK NO. 50.

Scott Shade, Ideal Form, Largest Size and Longest Stem.

A New Violet.

ED. AMERICAN FLORIST:

I enclose flowers of a violet grown here of an entirely new color. It is a distinct soft purple, and does not show any trace of blue at all. The flower, as you will see, is quite large, and its stem, although thin, is long and stiff. It is very fragrant, more so than Princess of Wales. The foliage is small, which I ascribe to the poor soil it is growing in; the flowers, as well as foliage, may improve if planted in better soil. Is there already a violet of the same color introduced or not? I hope the flower will reach you in good condition. H. S.

The violets arrived several days after the letter, and were completely dried up, consequently we could form no opinion of their merit or otherwise. If the flowers are as fragrant as you say, and distinct in color, we would advise you to propagate and grow a few plants well; then, when you have characteristic flowers and have noted more closely the habits and freedom of flowering, you will be able to judge better whether it is likely to prove of value.

Forcing by Means of a Hot Water Bath.

Over 30 years ago the late Robert Owbridge, of Church Walk Nurseries, Stoke Newington, showed how easy it was to force shoots of flowering shrubs into bloom by means of a hot-water bath, says the Gardeners' Magazine. He had occasion, owing to building operations, to cut down several large magnolias (M. conspicua) early in the year, and he placed the cut branches in a tank of warm water, where they quickly swelled up their flower buds and expanded their beautiful flowers; these latter were sent to market and secured excellent prices. Quite recently this method of forcing has been brought forward as something quite new, but the only new part about it is that efforts are being made to discover the best time to cut branches for the purpose and the best temperature at which to keep the water. We learn from Nature that Dr. H. Molisch, of Vienna, has recently described some experiments upon forcing the resting shoots of woody plants by soaking them in warm water. Twigs of the hazel, bearing male catkins, placed for 12 hours in a bath registering about 30° C. in Mid-November and then removed to a warm house, were hastened into flower in eight days. Flowers of forsythia similarly treated developed in a fortnight. Lilac, dog-wood, horse-chestnut and other shrubs or trees were also responsive to treatment. The stimulus is only effectual at a certain period, and appears to be distinctly localized. Staminate buds of hazel could be forced in November, but twigs bearing pistillate flowers could not be stimulated until December.

Mrs. W. K. Feirerabend.

On January 27, Miss Carolyn Bock and Wm. H. Feierabend of Poughkeepsie, N. Y., were united in marriage. Miss Bock had for years been connected with the extensive violet business of her brother-in-law, B. Willig, and is familiar with the violet in all its phases. Mr. Feierabend is a well known merchant of Poughkeepsie, but in April will give up his business to devote his time to horticulture in which he is deeply interested.

THE ROSE.

Notes in Season.

Potting the young rose stock from the cutting bench is now in order, but before proceeding to pot, there must be certain preparations in order to have the work run along smoothly and with little loss of time. First, prepare the soil, using a stiff loam containing a good amount of fibre; mix one part well-rotted cow manure with three parts soil: screen both through a ½-inch mesh, and mix thoroughly. Do not have the soil wet by any means; it is better to let the soil dry out in a rough state until it can be easily rubbed through the screen, than to screen when wet and allow it to dry on the potting bench. On the other hand it should not be too dry when potting, just moist enough to spread around the roots and to pack firmly. Remember to give the young plants the sunniest location possible, a rose will not stand stinting at any stage of the game. The house should be well ventilated and the young plants placed on tables away from walls or shaded corners. The benches should be thoroughly cleaned and given a coat of lime wash and the side strips should not be higher than the pots after a half inch layer of screened ashes has been firmly packed on the benches and watered down. Never plunge pots in the ashes for good results.

When ready for potting, remove the cuttings carefully from the sand. When the roots have attained a length of half an inch, place the cuttings in a flat that has been partly filled with moss moistened and pressed flat; this will keep the cuttings fresh and protect the roots. Do not take up too many at one time. Most of the indoor varieties, excepting American Beauty, can be potted in 2¼-inch pots, for American Beauty use a 2½-inch pot. Do not jam the cuttings down in the pots and then pack the soil around them with the fingers, but hold the cutting so the roots will be near the top of the pot: sift the soil in around the roots carefully and thump the soil down or jar it down with very little pressure from the fingers. A careful rose cutting potter will not make such a wonderful showing for a day's work as this work requires twice the time allowed for general stock, but the plants must be well potted.

Do not let the plants lay around in flats after potting; set them up and, about

Mrs. Feirerabend (Nee Bock).

every half hour, water down and mark with a label so as not to get too much water on the plants previously watered. A good plan is to water them once, then in half an hour give them another watering. After the water has settled well knock out a plant here and there, to see if the water has reached the bottoms of the pots; if not, they will require more. Shade the plants for several days by using cloth elevated above the plants, either tacked on frames or stretched on wires. Do not spread newspapers over them shutting out the air. Cotton cloth is inexpensive and can be used repeatedly in various ways around the greenhouses. As soon as the roots begin to start out in the new soil the shading can be removed. Keep a little sulphur painted on the pipes and syringe on bright days, making a fine spray and using considerable force after the plants are well rooted. Ventilate carefully but allow them all the air possible; run the houses at rose house temperature 60° at night, 75° with air in daytime.

E.

Treatment of Kaiserin and Carnot.

ED. AMERICAN FLORIST:—

I wish to learn through your valuable paper how to proceed with a house of two-year-old Kaiserin and Carnot roses. Some are on their own roots and the balance are grafted stock. The soil is of a clay loam and the benches are on the ground. The subsoil is of a sandy soil, which drains very readily. The plants have been kept on the dry side since November 1, and the temperature as low as possible in warm weather, and in cold down to 28°. When shall I start them to get my first crop for Easter? How much of the old soil can I remove without injury to the plants, and how much manure and fertilizer can I use and be safe? How should I increase the temperature, and how much water can be applied?

X. Y. Z.

The plants may be started February 1 and will probably be in good condition by Easter. Remove any weak or old wood and prune back the strong shoots. Cut them according to their individual strength—not all alike—leaving the strong healthy shoots longer than the weaker ones. Remove about an inch of the old soil unless you find roots in it. If so remove only to the roots and do not damage them unnecessarily. Top dress, first with a layer of bonemeal about one pound to two square yards, or enough to give a liberal dusting, then fill up the benches with good, rich, composted soil. No other manure will be needed. If the soil is in a very dry condition (it should not be) give one good soaking of water before applying the bonemeal or new soil. If in a medium condition it will be all right, and the benches will need very little water until growth starts, just enough to keep the soil evenly moist. If the under soil gets real dry it is difficult to get the water

ESTABLISHMENT OF A WIEGAND & SONS, INDIANAPOLIS, IND.

down through the new soil. Start with a temperature of 40° and increase this gradually, a few degrees at a time, until you see how the plants are coming out, the maximum temperature of 58° at night being reached in about six weeks after starting. As to how much water to apply this is a question we are frequently asked, but cannot answer. Always water in accordance with the state of growth and the weather; when the growth is active and pulling away at the roots and the weather is bright so that plenty of air can be kept on it is hardly possible to overwater. It is very different in dull or wet weather. This matter of watering can only be decided on the spot. G.

Seedling Roses.

ED. AMERICAN FLORIST:—

I have several seedling roses, two years old and 18 inches high. They have never flowered though planted outdoors. How old should they be before they flower? Can you tell me if seedling roses have been grown in New Orleans?

J. R. G.

Roses seeded from teas and hybrid teas generally flower the first year, not always. Seedling roses are subject to an enlargement of the cells of the roots which generally prevents them either growing or flowering. "J. R. G." would do well to bud his seedlings on some good stock for under the influence of a new root or roots they generally show flower. Hybrid perpetuals, the mosses and climbing varieties sometimes grow on for years without showing flower. We had a seedling from Reine Marie Henriette which grew annually but never did flower. Either graft or bud the seedlings on some good stock and, if they fail to produce bloom then, throw them away.

E. G. HILL.

Richmond, Ind.

To Be Done Now.

IN THE GREENHOUSES.

New crop lily of the valley may be used now for forcing with perfect confidence.

After forgetmenots have passed their best throw them out as they may be attacked with mildew that will spread to other plants.

A batch of pansies may be sown for early planting outdoors and late flowering inside and in frames.

Get after any chance bits of mildew on the roses in crowded parts of the benches or elsewhere and prevent it spreading.

When inserting carnation and rose cuttings select them as near as possible of one size so they will be all rooted at about the same time and make a regular batch of plants.

Cut up any lanky old plants of Dracæna terminalis or other species into eyes and root them over a brisk heat. The tops may be rooted in bottles of water with a little charcoal. This is a better way than mossing the tops as this check causes the stems to harden.

Divide and repot Adianium Farleyense. Where fronds are still on the plants cut them and let new growth start or support them after the divisions are made.

Pot imported aspidistras immediately on receipt giving a moderate shift only and keeping them rather close.

Select the forwardest lilies for Easter and give them the best attention and sufficient heat to get them on time.

Where dahlias are to be freely propagated take out a few of the roots and place them over heat to start them into growth for cuttings.

OUTDOORS.

Push on with any cleaning and liming of fruit trees, pruning of old orchards and cleaning up generally as long as the weather is suitable.

A few leaves or a little litter scattered around the violet plants in the milder localities will insure useful gatherings later on in spring.

CARNATION MRS. J. C. VAUGHAN.

In severe frosty weather any piles of old soil that has been used in the benches may be turned over and the inside exposed to the frost. This will have the effect of killing many injurious insects and spores of fungus.

Haul out clinkers, ashes or other hard material to low, soft spots around the greenhouses or sheds where they will gradually form good hard walks instead of mud.

See that all newly planted trees are well staked and supported so they will not be blown about, or the roots cannot take a good hold on the soil.

Pot up Gerbera Jamesoni, Heuchera sanguinea, funkias and other hardy plants for light forcing in the greenhouse.

Ventilate the frames containing hardy and semi-hardy shrubs and plants freely when occasion offers. A clear cold day when there is little or no frost is the best time for the purpose.

Mix old mushroom manure with bench soil or any other oddments of soil that may be around for use later in potting bedding stock.

The burned refuse from a garden smother is excellent material for the quarters to be devoted to potatoes or tomatoes. Keep it dry until needed or much of the nutriment in it will be lost. Where there is still any rubbish of any kind lying around get it burnt up when it will prove of value instead of a nuisance.

OBITUARY.

Arthur Mellor.

Arthur Mellor, who for a number of years was prominently connected with the florist business of Lowell, Mass., as a designer and decorator, died at Phoenix, Ariz., January 16. He was about 35 years of age and was born at Birmingham, Eng., and removed to Lowell with his parents when about 16 years old. His first employer at that place, we believe, was the late Edwin Shepherd, who at that time was the leading florist of Lowell. He worked for short periods in Boston and other cities, but practically all of his manhood life, up to two years ago, was spent in Lowell. He was for a number of years with the late George Patten who conducted a retail store at Merrimac square, and the beauty and taste of his designs were noteworthy.

After the death of Mr. Patten, Mr. Mellor formed a partnership with the late George Saunders, the firm name being Mellor & Saunders. The business was continued for about two years, but was not a financial success, due, doubtless in a measure to the failing health of Mr. Mellor. He was of slender build and of the physical type subject to weak lungs and the rigors of the climate sent him first to Florida and later to Arizona. Arthur Mellor, in addition to being an expert florist, was of a genial, kindly and obliging disposition. He had many warm friends who have sincerely deplored the ill health and misfortunes which overtook him while yet in the prime of life. He is survived by a widow, Mrs. Blanche Farrington Mellor, a member of an old and highly esteemed family of Lowell.

THE AMERICAN FLORIST

1885 TWENTY-FOURTH YEAR. 1909

Subscription, United States and Mexico, $1.00 a year; Canada $2.00; Europe and Countries in Postal Union, $2.50. Subscriptions accepted only from those in the trade.

When sending us change of address always send the old address at the same time.

Advertising rates on application.

From the first issue the AMERICAN FLORIST has accepted only trade advertisements.

Advertisements must reach us Tuesday (earlier if possible), as we go to press Wednesday.

We do not assume any responsibility for the opinions of correspondents.

THE mild weather is bringing lilies along very quickly.

CHICAGO.—Temperature January 23, 65°—40° above normal.

THE date of Easter is April 11, one week earlier than last year.

ALL Italian products have increased in price enormously as a result of the recent catastrophe.

THE weather will probably keep us guessing for the next two months and it is well to be prepared for anything from blizzards to summer heat.

THROUGH an error of our correspondent the date of the carnation show of the Cleveland Florists' Club was given as February 10 instead of February 8.

BY the items of news that leak through, the Cincinnati brethren are going to give the delegates to the S. A. F. convention in August the time of their generation.

SHARP, PARTRIDGE & Co., of Chicago, report an unusually large number of inquiries and early orders for greenhouse glass and point to this as an indication of considerable activity in all lines of greenhouse construction for 1909.

THE season for increased use of the poisonous chemicals in fumigation is again with us. Be warned in time and use the greatest care that children or inexperienced persons are kept away from it. The locked faucets on the products of one of our well known advertisers of this class of goods are a great safeguard along this line.

Society of American Florists.

REGISTRATION OF CYPRIPEDIUM.

Public notice is hereby given that Alfred J. Loveless, of Lenox, Mass., offers for registration the plant described below. Any person objecting to the registration of this plant or to the use of the proposed name is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date.

Cypripedium Ursula, parentage, C. Leeanum Clinkaberryanum X C. Niobe Shorthillense. Description—upper dorsal, round pointed at the apex 2¼ inches wide and the same in depth, upper half pure white, base yellowish green with numerous dark spots, a bright reddish purple line ¼ inch wide runs through center to apex, flushed with the same color, on each side of central line radiating from the base, until lost in the white above; lower dorsal, pale green, keeping well forward, giving the flower a round full effect; petals, deeply corrugated, brownish on upper half with a margin of pale green, terminating with numerous minute spots at base; dark brown line runs through center, lower half light yellowish green splashed with chocolate; pouch, 1½ inches wide at top, differing from either parent by almost touching the petals on either side and being of a bright glossy reddish brown in front shading back to yellowish green. Foliage, similar to C. Leeanum.

W. N. RUDD, Sec'y.

January 25, 1909.

The following letter and questions have been sent out by Benjamin Hammond, chairman of the legislative committee:

The legislative committee is desirous of obtaining information upon matters pertaining to a revised tariff scale, and requests your assistance. Will you please look carefully over the list of questions on the reverse side of this letter, and return the list as soon as possible, for use and guidance?

THE QUESTIONS.

(1) Are you engaged in importing merchandise known as horticultural goods?

(2) What class of horticultural goods do you import, and to what extent?

(3) On what articles, in your estimation, should the tariff be increased? Why?

(4) Name any articles on which you think the tariff should be reduced, and why?

(5) Name any articles in the said class on which you think the tariff should not be changed, and why?

(6) Please give your views as to the advantage to importers of a specific rather than ad valorem duty on horticultural goods.

(7) Have you made an appeal from the decision of the appraisers at any of the ports of entry? If so, when and where and with what results?

American Rose Society.

SPECIAL PRIZES—DIVISION G.

In addition to the list of premiums announced on page 1201 in our issue of January 9 the following special prizes are offered for competition at the annual convention and spring exhibition of the American Rose Society to be held in Buffalo, N. Y., March 17-20. Secretary Hammond informs us he expects to see the list much lengthened:

The Dorranee challenge prize valued at $250 for the best display of cut roses of all varieties offered by Benjamin Dorrance; the winner to hold the prize for a year and on relinquishing it to the society for another competition at the end of that period to receive a silver shield suitably engraved as a permanent record of his having held the prize. The names of the winners will be engraved consecutively on the prize.

The Michell prize for the best 50 blooms of Kate Moulton in the show; a silver vase valued at $25 offered by Henry F. Michell Co., Philadelphia, Pa.

The Kroeschell prize for the best 12 named varieties of hybrid perpetuals in pots; prize of $10 offered by Kroeschell Bros. Co., Chicago.

A prize of a silver cup—a beauty—to be assigned by committee.

The J. A. Budlong prize of $25 in gold to be assigned by committee.

The Valentine prizes of $10 first, and $5 second for the best arranged vases or other receptacles containing not to exceed one dozen roses (American Beauty barred) no foliage or other accessories except rose foliage permitted. The competition to be open to all florists and employes.

Waban Rose Conservatories prize, $25.
W. H. Elliott prize, $25.
Welch Bros. prize, $25.
Ellwanger & Barry prize.

Besides the above the society's gold medal for the best new rose, the silver medal and certificates of merit will be awarded, the last named being given to all novelties scoring 80 points. Intending exhibitors should communicate with Secretary Benjamin Hammond, Fishkill-on-Hudson, N. Y.

A Brother in Distress.

Gustave V. Pearson, a native of Sweden, who has been in this country for 16 years and worked as a florist, has applied to us to make his case known through our columns, which we do the more readily as his seems to be a genuine case of hard luck. He worked until four years ago for H. T. Conant & Co., of Salem, Mass., when he had to give up on account of sickness. His doctors advised him to turn down the greenhouse work and try outdoor life which he did but only to have to repeatedly give up, and now, his savings gone and his wife also crippled with rheumatism, he is quite a wreck both in health and financially. He hopes to go back to Sweden and through our columns asks the help of any florists or gardeners to enable him to get there as his doctors think this his only chance. We will gladly forward any subscriptions that may be made towards helping this our unfortunate brother worker in his hour of need or any money sent direct to him would be gratefully acknowledged by him. His address is 8 North court, Salem, Mass., and we trust our readers will respond to his urgent appeal.

Meetings Next Week.

Boston, Mass., February 6, 11 a. m.—Massachusetts Horticultural Society, Horticultural Hall, 300 Massachusetts avenue. Lecture on "The Etherization of Plants for Forcing Purposes," by Prof. Wm. Stuart, Burlington, Vt.

Buffalo, N. Y., February 2, 8 p. m.—Buffalo Florists' Club, Saturn hall.

Chicago, February 4, 8 p. m.—Chicago Florists' Club, Union Restaurant, 111 Randolph street.

Dayton, O., February 1, 8 p. m.—Dayton Florists' Club, 37 E. Fifth street.

Detroit, Mich., February 1, 8 p. m.—Detroit Florists' Club, Cowie building. Paper on "Scales and Insects Affecting Trees and Shrubs," by D. S. Kimball.

Grand Rapids, Mich., February 1.—Grand Rapids Florists' and Gardeners' Club, Board of Trade rooms, Pearl street.

Indianapolis, Ind., February 2, 7:30 p. m.—State Florists' Association of Indiana, State House.

Lake Geneva, Wis., February 6, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

Louisville, Ky., February 2, 8 p. m.—The Kentucky Society of Florists.

Milwaukee, Wis., February 4, 8 p. m.—Milwaukee Florists' Club, Quiet House, corner Broadway and Mason street.

Montreal, Que., February 1, 7:45 p. m.—Montreal Gardeners' and Florists' Club, Royal Guardians building, 211 Sherbrooke street, West. Paper on "How Plants Feed and Grow," by Prof. W. Lochhead, Macdonald College.

New Orleans, La., February 3, 8 p. m.—New Orleans Horticultural Society, Kolbs' hall, 127 St. Charles avenue.

Newport, R. I., February 3.—Newport Horticultural Society.

Ottawa, Ont., February 4-5.—Canadian Seed Growers' Association, Canadian building, fifth annual convention.

Pasadena, Calif., February 5, 8 p. m.—Pasadena Gardeners' Association, G. A. R. hall, East Colorado street.

Pittsburg, Pa., February 2, 8 p. m.—Pittsburg and Allegheny Florists' and Gardeners' Club, 422 Sixth avenue.

Salt Lake City, Utah, February 2, 8 p. m.—Salt Lake Florists' Club, Huddart Floral Co., 114 East Second South street.

San Francisco, Calif., February 6.—Pacific Coast Horticultural Society.

Seattle, Wash., February 2.—Seattle Florists' Association, Chamber of Commerce, Second avenue and Columbia street.

Utica, N. Y., February 4, 8 p. m.—Utica Florists' Club, Hotel Martin.

Washington, D. C., February 2, 8 p. m.—Florists' Club of Washington, 1214 F street, N. W.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—By all around greenhouse man and gardener; seven years European experience. Address STEPHEN PANASUK, 169 Liberty St., Chicago.

Situation Wanted—By practical gardener and florist; private or commercial; life experience; good reference. Address J. HODGE, 44 West St., Fitchburg, Mass.

Situation Wanted—By a grower with 15 years' experience in roses, carnations and general stock; best of recommends; age 32, married; please state wages, etc. Address Key 767, care American Florist.

Situation Wanted—By an American of middle age, by Feb. 22nd as grower of Beauties, teas or carnations on wholesale or large retail place; please state wages. Address Key 764 care American Florist.

Situation Wanted—By thoroughly competent grower of roses, carnations, 'mums and general stock, have had 15 years experience; strictly sober and honest; can furnish best of reference. Key 769, care American Florist.

Situation Wanted—By thoroughly competent greenhouse and storeman of 17 years' experience; handled help for 12 years; strictly honest and sober; state wages in first letter west. Key 750, care American Florist.

Situation Wanted—Landscape draughtsman, graduated, good designer, experienced in executing, seeks position where there are chances to promote business; middle west or west preferred. Key A 100, General Delivery, Chicago.

Situation Wanted—By lady, 27 years old, experienced in general office work and good designer; also used to waiting on customers; reference. W. W. Coles. Address DELLA RATCLIFF, 1313 N. Courtland Ave., Kokomo Ind.

Situation Wanted—By single man, age 39, sixteen years' experience as grower of cut flowers bedding plants, etc. Small commercial place preferred; can furnish reference. Address E. A. E., 318 N Water St., Decatur, Ill.

Situation Wanted—On a good private or commercial place by a man who understands his business; good grower and manager; best references; can take full charge, or would accept position with promotion in view. Address Key 762, care American Florist.

Situation Wanted—By a single German gardener; thorough practical knowledge of landscape, greenhouse, flower, vegetable, trees, shrubs hardy perennials etc., care improvements of country places; references. Address FLORIST 16 North William St., New York City.

Help Wanted—We need a thoroughly competent rose grower: Send full particulars at once. Key 770, care American Florist.

Help Wanted—Farmer with some road and nursery experience. Address stating salary and references. H., care Vaughan's Seed Store, Chicago.

Help Wanted—First class market gardener; one accustomed to growing vegetables in greenhouses and hotbeds. None but first-class man need apply. Address, with references, Key 747, care American Florist.

Help Wanted—First-class market gardener, one accustomed to growing vegetables in greenhouses and hotbeds, with some knowledge of carnations and bedding stock, and able to take full charge of 25,000 feet of glass; married man preferred; none but strictly sober person need apply; references. Key 753, care American Florist.

Wanted—German, 35 years of age, 20 years' experience in every line of the trade would like to exchange letters with the widow or daughter of a florist. Key 763, care American Florist.

For Rent—Fifteen acres near large city in Indiana on shares for trucking, small fruits and poultry, to an experienced man with small capital; good river bottom land good five room house, stable and outbuildings team, wagons and all garden implements furnished; an abundance of water for irrigation; only experienced men with some capital to put in hot beds, help, etc., and understanding intensive methods in truck gardening need apply; write giving full particulars of experience, family and references. Address Key 765, care American Florist.

For Sale—Greenhouse and contents at great bargain. L. A. JENNINGS, New Castle Ind.

Ornamental Gardens and Garden Materials.

Synopsis of a paper given, with stereopticon illustrations, by Prof. E. A. White, Amherst, before the Massachusetts Horticultural Society, January 23.

The development of ornamental gardening follows step by step the increasing wealth and prosperity of a nation and one of its most pleasing features is the interest manifested by all classes of people; the wealthy man in the development of his large estate with its extensive lawns and elaborate formal gardens; the so-called middle class, the business man, who owns his suburban home, and with it a quarter or half-acre of lawn; the workingman with his backyard plot; and we must not exclude the tenement dweller with the geranium in an old tin can. Plant life in some form appeals to all classes of individuals.

ENGLISH GARDENS.

A detailed study of the history of English gardens is intensely interesting. Very little gardening was done in England previous to the sixteenth century. Before this period the country was engaged in wars, the castles and homes were inaccessible places, limited in extent, and surrounded by moats. When men came to dwell together in harmony the homes were built on broader fields, the gardens spread beyond the enclosure of the moat, then developed an interest in gardening.

The idea of seclusion suggested by the moat is retained in English gardens at the present day. The Englishman's garden is for his private use, and is characterized by neatness and seclusion. In America the tendency is to often for the individual to seek to impress the outsider with a show of elegance and color in the front yard, while the back yard may be far from attractive.

One of the most conspicuous trees in English gardens is the yew. It is not unlike our American hemlock (Tsuga Canadensis), in many of its characteristics. Its extreme plasticity makes it an especially valuable plant for hedges, and for trimming into the formal and often grotesque shapes which may here be seen. By the way, our hemlock is a species which deserves more frequent use in America than is now given it. No one of our evergreens has a more graceful foliage, and none gives us more beautiful winter effects. It is a shade enduring tree, which makes it especially valuable for screens along town or village streets, where the larger trees of the street make such a dense shade that other species are killed by them. The hemlock is also extremely plastic, and will endure severe pruning without detriment to the vigor of the tree.

Nowhere is rivalled the beauty of the English roses; the climate especially suits them, and doubtless their vigor and hardiness are due also to the protection from driving winds and rains afforded by the yew hedges. English gardens abound in the old-fashioned flowers, so dear to the hearts of our grandmothers. Hollyhocks, poppies, larkspurs, columbines, and lavender grow in wonderful profusion, the beauty and brilliancy of the blooms being unexcelled in other gardens of the globe. Beyond the limits of these formal gardens, extends the natural style of gardening and the park system prevails.

In this country we have few typical Italian gardens, but several distinctly formal gardens are so-called. The nearest approach to the typical Italian garden is that on the Hunnewell estate at Wellesley. Here we find evergreen trees predominating, and these trees are trimmed in symmetrical and unusual shapes. The terraces are in evidence, and the placid water of the lake harmonizes with the perennial verdure.

JAPANESE GARDENS.

Japanese gardens are representative of the natural scenery of the country. These people seek to bring into their gardens the beautiful that surrounds them in nature and to reproduce these scenes, often in miniature, from the varied landscape of the country. There are artificial hills, rocks, lakes and cascades copied from some unusual landscape effect. Garden compositions are striking in the extreme, and the garden accessories are many and varied.

It has been a custom of the Japanese from very ancient times to attach a religious significance to their principal garden stones by giving them the names of different Buddhist deities. Some of these religious stones are found in every garden, no matter how limited may be its area. These stones are selected with the greatest care, and have considerable value, because of the difficulty in obtaining them, and because often the expense of transporting them is considerable. In the Japanese gardens there are recognized five radical shapes of stones; the tall vertical stone, the low broad stone, a stone of medium height, and a long curved boulder of horizontal character.

Turf was not used to any extent in any of the old gardens, although its introduction is frequent in the gardens of the present time. In a typical old Japanese garden the plain, open portions are spread with sand, which is carefully raked and weeded. This is kept moistened at all times, and in summer this moisture gives the cool, fresh, pleasing character to the gardens. In order to preserve these sanded areas from injury by the Japanese footwear, and also to make walking comfortable in the garden when the soil is wet, a pathway is invariably constructed with stepping stones. The Japanese gardeners follow carefully devised rules in placing these stones, in order that they may be walked upon with ease. In ancient times it is said that the height of these stones was governed by the importance of the individual owner; that those in the emperor's gardens were made six inches high, those for a daimio four inches, those for ordinary samurai

nearly three inches, and those for common folks an inch and a half.

AMERICAN GARDENS.

In our garden development in America we have come to recognize two distinct types of gardening—the formal and natural. Each is good, but each requires its special treatment. The formal has been designated as the "full dress type of gardening; stately, princely, full of dignity; a type of gardening which seems to demand that the actual working of it be kept out of sight, while the ordinary gardens full of natural beauty in free, flowing lines seem to demand the mower, the wheelbarrow and the shirtsleeved laborer." The development of each of these types will depend largely upon the use to be made of the area ornamented.

Probably the most elaborate planting is demanded in the formal gardens. Here there must be symmetrical and geometric designs and shapes. The trees and shrubs which lend themselves the most readily to this character must therefore be selected for planting. The rectangular and curvilinear beds must contain herbaceous perennials which are pleasing in the combination of their colors, and which furnish a succession of flowers throughout the season. Bulbs are followed perhaps by pansies or English daisies, and these by aquilegias, hollyhocks, larkspurs, boltonias, asters, hardy chrysanthemums, and the like. Such gardens as these demand constant attention. As one species passes out of bloom, the dying plants must be removed, and space allowed for the succeeding species.

SUITABLE SHRUBS AND PLANTS.

The trees, shrubs and herbaceous perennials which should surround the homes of the average class of Americans are of especial interest to the majority of people. These should be selected with the greatest care, and they should represent the finest taste possible. The number need not necessarily be large. The species should not be too varied, or the effect will be too striking and not in good taste. One must take into consideration the species best suited for spring, summer, fall and winter effects. Too frequently the winter effects are not carefully considered and much of the charm of planting is lost. The varied green of the coniferous trees, and especially the delicate effect produced, when the evergreens of more delicate foliage, like the hemlocks and chamaecyparis, are covered with snow, is very pleasing. The variation in color in winter of the bark of many of the deciduous trees and shrubs should also be carefully studied in selecting the planting list. Few, if any of the shrubs equal the different varieties of cornus, and salix, for these winter effects. The flowers of spring and summer, the fruits of summer, fall and winter, and the colors of bark and twigs in winter, should keep our homes bright and attractive throughout the year.

The improvement of school grounds, especially in the rural districts is a topic which should be more generally considered by the governing board. Many of our country schoolhouses are far from pleasing in their architecture, and the barrenness of the school grounds is depressing. In many cases the building is situated on the cheapest land available, and the soil is consequently of the poorest quality. In such instances it is possible to remove sufficient soil from around the base of the building so that vines may be used to hide its deficiencies. By a careful selection of species it is possible also to adapt to their environment, the shrubs planted in the school yard.

One may study the effect of the beautiful produced by the hand of man in the gardens of the old and the new world. He finds much that is impressive and to be admired in these gardens. But to the nature lover this same element of beauty prevails throughout the garden of God's "Out-of-doors." Nowhere in the formal gardens do we find impressiveness more forcible than in the towering pine, the massive oak or the picturesque hickory. In Nature's garden there is a marvelous blending of colors for spring, summer, fall and winter effects. The attractive white birch bark blends with the grays and browns of other species. The fall fruits are just as abundant and attractive as in our introduced species, and the spring and summer flowers just as brilliant in coloring and sweet in perfume. In English gardens the symmetrical enclosures are attractive; in Italy the perennial verdure of the trees, blended with the moving water, is grand; in Japanese gardens the picturesqueness appeals to the eye; but in no garden fashioned by the hand of man do we find the lofty grandeur of mountain peaks, blended with broad sheets of water surrounded by magnificent trees, beautiful shrubs and flowers such as we find in the garden of the great "Master Gardener."

FORT MORGAN, COLO.—L. J. Reid will build a greenhouse and start in the florist business on his lots at the corner of West street and Platte avenue.

GREEN BAY, WIS.—Owing to the large increase in business Chas. De Clerc, is to build a large addition to his present greenhouse near the Fort Howard cemetery. Work on the new addition will not be commenced until next spring but all of the material will be on hand long before the work is commenced as the glass is expected to arrive in the city in a few days. When the addition is complete it will be one of the largest greenhouses in the state. The whole building will cover about 42,000 square feet. The new part of the greenhouse will be used almost entirely for carnations and roses.

Chicago.

VOLUME OF TRADE LARGER.

The mild weather of the past week has brought along a somewhat increased supply of stock, but the demand is also better and there is consequently a larger volume of business. Long stemmed American Beauty roses are fine and continue in large supply. The short and medium grades are unsatisfactory as to quality. In miscellaneous roses the heaviest call is for Bride, but Bridesmaid, Killarney and Richmond are also in active demand. There is generally a better supply in this line and probably orders have been filled in most cases on select and medium grades. Short white roses are extremely scarce. The prospects seem to be that Bride and Bridesmaid will be more plentiful within a week as several large growers report good crops coming along. As the days begin to perceptibly lengthen and the rose plants get more sun there will naturally be more stock cut. The market conditions as regard carnations seem just the opposite to those affecting roses, as the demand is not sufficient to clean up receipts, and prices have begun to weaken. Considerable soft stock is seen. Last Saturday was a record breaker, according to weather bureau reports, it being the warmest January day in 33 years. As we have had almost a steady week of spring-like weather, shippers are having trouble with carnations, many complaints coming in of receipts of sleepy stock. There is a rapidly increasing supply of bulbous flowers. Some very choice yellow tulips (Yellow Prince and Proserpine) and Golden Spur narcissus are being received. Lilies are easier in price, most firms receiving good cuts. Lily of the valley has also been in large supply. Sweet peas have been almost a glut and violets have moved none too well. Gardenias are now seen in quantity here with a very fine call for them. White lilac has been seen in small lots and a larger supply is promised very shortly.

NOTES.

Weiland & Risch report having had the order from Geo. W. Jackson, the contractor who was building the lake crib that was the scene last week of a fearful holocaust, for 50 large double wreaths. The wreaths were of Bride roses and magnolia leaves. It is said the order took one and a half barrels of magnolia. Seven men worked all Friday night on the order and it took a special express car to get the pieces to Mount Greenwood cemetery.

Prof. J. M. Coulter, head of the botany department of the University of Chicago, with his wife, daughter and son were aboard the ill fated S. S. Republic. Prof. Coulter had just started on a leave of absence and contemplated studying in Italy. The party escaped without injury beyond the interruption of the trip.

The Kennicott Bros. Co. received a carload of wild smilax on Monday last, and sold all but one case that same day. E. E. Pieser, of this firm, says trade is better, florists seeming to have lost that down-in-the-mouth feeling induced by the recent panic.

W. N. Rudd was in a hurry leaving the meeting of the Horticultural Society Tuesday afternoon, but the cause of his haste was not known until it was later found that he had appropriated President Kelley's overcoat.

Peter Reinberg, who underwent an operation for a tumor a few days ago, is recovering at St. Elizabeth's hospital. His attending physician said that he had withstood the shock well, and now is in no danger.

Leo. Bather, son of Andrew Bather, Clinton, Ia., was in town this week buying supplies and furnishings for a new store to be opened opposite the old location next week.

Chas. W. McKellar is now regularly receiving large shipments of gardenias. Cyclamen plants in bloom are also quite a specialty with Mr. McKellar.

Geo. E. Feustel, the pot man of Fairport, Iowa, was a caller this week and reports business in his line exceptionally good.

Some 43 or 44 of the dead from the lake disaster were buried at Mt. Greenwood cemetery.

Wietor Bros. are cutting extra fine Bride, Bridesmaid, Killarney and Kate Moulton roses.

Bassett & Washburn are still cutting large quantities of Formosa lilies.

Ernst Wienhoeber is planning to go to Europe the coming summer.

Mrs. Albert Klingenberg, 920 N. Halsted street, is dead.

Art Craig, son of Joe Craig, was married last week.

Visitors: Leo. Bather, Clinton, Ia.; Geo. A. Heinl, Toledo, O.; L. P. Harley, Hartford, Mich.; C. H. Frey and I. F. Frey, Lincoln, Neb.; J. A. Valentine, Denver, Colo.

Horticultural Society of Chicago.

The annual meeting of the Horticultural Society of Chicago was held in the trustees' room at the Art Institute, January 26, with President Kelley in the chair, the principal business being the election of officers. Treasurer Wienhoeber reported a substantial balance on hand, and arrangements were made for the early delivery of the medals awarded at the National Flower Show. Seventeen new members were elected, and the members of the board of directors were chosen to succeed themselves. W. E. Kelley was elected president; W. N. Rudd, first vice-president; N. H. Carpenter, second vice-president; Ernst Wienhoeber, third vice-president and treasurer. Two members were nominated for the secretaryship, Jas. H. Burdett and N. P. Miller. In view of this double nomination it was decided to notify all the members of the fact and the election of secretary, assistant secretary and executive committee was deferred until February 9. The retiring members of the executive committee are J. C. Vaughan, W. N. Rudd, August Poehlmann and J. B. Deamud. The executive committee was given authority to hold a flower show next fall if that course should be considered expedient.

PRICES HOLDING UP.

The market this week has held up well, notwithstanding the very inclement weather. The recent heavy snows have melted and made walking uncomfortable and transient trade has suffered. Carnations have held up well at $2-$3 per 100, although the down-town stores have signs in their windows advertising carnations at 25 cents per dozen. These of course are sleepy and not really worth anything. Roses are scarce, bringing good prices; violets held at 75 cents per 100 the first part of the week, but at time of writing are selling at 60 cents, and with the bright warm weather the prospects point to a further decline. Trade is reported as slow; even funeral work has not been heavy during the past week.

NOTES.

The Henry Shaw management has decided to do away entirely with the annual banquet given to florists and nurserymen and to put the money into improvements at the garden. As the trustees have thought fit to set aside the wishes expressed in the will of the late Henry Shaw in this particular, it would be also advisable to allow the garden to be open to the public every Sunday in the year instead of only two Sundays as the will of Henry Shaw provided.

A meeting of the Engelmann Botanical Club postponed from January 11 was held January 25, at Central high school building. C. H. Thompson of the Missouri Botanical Garden speaking on twigs of woody plants in winter.

Henry Kahrs held his formal opening at his store 605 Locust on Saturday. Every lady visitor was presented with a large floral card of a vase of American Beauty roses suitable for framing. Music was also furnished.

Kalisch Bros. have improved their store and carry a fine line. Their location at Taylor street and Delmar avenue is a very prominent one.

Kingsley of the Mullanphy Floral Co. is on the sick list so his partner, Wm. A. Seeger, Jr., has to do double work at this busy store.

Paul Scheider, who recently had a fire at his greenhouses, will build a new house 20x100 feet for carnations.

Hugo Gross is now cutting some of the finest California violets that enter this market.

W. F.

Minnesota Florists' Association.

The regular monthly meeting of the Minnesota State Florists' Association was held in the new hall, 510 Snelling avenue, St. Paul, on Tuesday, January 19. The new tables provided for the exhibits were in place and a nice array both of plants and cut flowers was shown. While the attendance was not up to expectation, the interest shown by those present was very gratifying. The out-of-town members present were G. A. Clausen, Albert Lea, and A. N. Kinsman, Austin. We also had as visitors, A. Ringier and L. Henderson, of Chicago and — Jantzen of Hillegom, Holland, each of whom addressed the meeting and added to the interest of the occasion.

The entertainment committee, through O. J. Olson, reported having made arrangements for a dance and card party to be held in U. C. T. hall, St. Paul, the evening of February 15, tickets $1 per couple, extra ladies 50 cents. This hall is one of the finest in the city, if not the very best, is centrally located and it is earnestly hoped by the committee that the trade in general will attend and make it a rousing success. The social features of the association should not be overlooked as they tend to bring the trade into closer communication, make better acquaintances and in general create a good feeling.

The report of the committee on the proposed state fair premium list, which was presented at the last meeting, was unanimously adopted and the committee instructed to use all means in its power to induce the state fair managers to accept the list; to make a separate division for floral exhibits and to allow the Florists' Association to name a superintendent for it.

A. Swanson of the committee on awards exhibited samples and quoted prices on blanks for the society's use, and was instructed to procure same, as well as a seal for the use of the association. O. J. Olson read a very interesting paper on the "Retailer's Profit in Flowers," which was quite generally discussed by those present. After some discussion of the matter the executive committee was instructed to ascertain the feeling of the trade in the twin cities and report at the next meeting the advisability of holding a fall flower show.

The committee on awards reported as follows: Certificates of Merit—to Carl Haugen, for double cyclamen scoring 85 points. To Aug. Swanson for Lilac Marie LeGrey, scoring 80 points. To Louis Boeglin for Primula Sinensis scoring 85 points. To E. Nagel & Son for Winsor carnations scoring 85 points. Honorable mention to Louis Boeglin for Primula Kewensis scoring 75 points. To E. Nagel & Son for lily of the valley scoring 75 points. Theo. Wirth on behalf of the Minneapolis bowlers challenged the St. Paul bowling team to a match in Minneapolis January 28. This challenge was instantly accepted by Mr. Olson of the St. Paul team and a great deal of sport is looked for.

S. D. DYSINGER, Sec'y.

Indianapolis.

THE MARKET GOOD.

The market has been very good the past week with a good supply and fair demand. The spring flowers coming in now take the place of carnations and roses. There is a strong demand for yellow bulbous stock, such as daffodils and tulips and they bring a good price this early in the season. There has been quite a lot of funeral work in the past week and all retailers report that they had their share of it.

NOTES.

E. A. Nelson had the decorations at the German house, while A. Wiegand & Sons had the decorations at the Columbia club Thursday night for the banquet given by the State Florists' Association to the American Carnation Society. The carnation exhibition was well advertised throughout the city.

A. Wiegand has been serving on the jury the past two weeks. He had the pleasure of being kept away from home two nights, being on a hung jury. Clarence Green of this firm has been off duty several days attending to household duties, as he has changed place of abode.

The firm of Bertermann Bros. as well as John Rieman report business as very satisfactory.

Smith & Young and Homer Wiegand say that their orchids are off crop just at present.

Baur & Smith are cutting some very fine carnations.

F. W. G.

Pasadena, Calif.

At the last regular meeting of the Gardeners' Association, held January 15, the election and installation of officers took place as follows: Otto Heutschy, president; James MacGillivray, vice-president; R. Mackenzie, secretary; John Blake, treasurer; R. Pegg, D. W. Coolidge and O. W. Howard, trustees; Robert Kroll, sergeant-at-arms.

R. M.

MANCHESTER, MASS.—Magnuson & Hylen, have erected a storage shed in the rear of their greenhouses on Bridge street.

Red Bank, N. J.

The fifth annual banquet of the Monmouth County Horticultural Society was held at the Sheridan hotel, January 20. The dining hall had just been painted and decorated and was much commented on. The new proprietor made great efforts to make this the best we ever had. Dr. Walter S. Whitmore acted as toastmaster in his usual spirited manner. The tables were invitingly set and the floral decorations were splendid. Prof. Wilbur Gardener entertained during the dinner with piano selections and speech making lasted until long after midnight.

Some of the prominent outside guests were Rev. E. J. Egan, W. Nash and J. A. Kemp of Seabright; W. R. Seymore, West End; B. Wykoff, Asbury Park; C. H. Logan, Frank Rudolf, H. Poshel, Elberon; P. Ewen, James Kennedy, A. Bauer, Deal; A. Herrington, W. Duckham and Chas. Totty, Madison; A. Wilson, Summit; J. Cahill, Locust; Wm. Scollay, A. J. Rickards, W. C. Rickards, H. H. Holden, Rev. James A. Reynolds and Dr. Edwin Fields, New York; A. C. L. Vincent, Quebec, Canada. There were over 100 members and guests.

TRADE ENCOURAGING.

The condition of the cut flower market during the past week was more encouraging. While it is true that there was no great boom in prices, the market had a healthier tone and both wholesalers and retailers seemed more satisfied. There is no great demand for American Beauty roses and it is hard to raise the wholesale price above 50 cents. Tea roses of the best grades have not been plentiful and prices have held firm, but nobody knows what another week may bring forth. Carnations are in very fair supply and there is nothing unusual to note in prices. As to violets, an experienced dealer recently remarked: "I firmly believe that more violets are now being sold on the streets of this city than in the retail stores"; and it looks that way. When a bunch of violets large enough for a corsage bouquet, can be bought on a street corner for 25 cents, it does not appear that the violet industry is in a flourishing condition; and this too at a time when the output is said to be below the average. It may save some good men from disappointment and financial loss to state here that the violet industry is now, and for some time past has been, overdone. Writing as sentimentalists, we would deplore the decadence of the violet; but, since we try to furnish all branches of the trade with information that will do them some good, it is time to call a halt on violet growing.

January 25.—Arrivals are light and prices hold firm. It now appears that most of the growers, profiting by sad experience, have been more cautious this season than heretofore, in the matter of bulb stock. Thus far there is no surplus. We hope this condition will prevail throughout the season.

FLORISTS' CLUB—CARNATION NIGHT.

February 8 will be carnation night at the Florists' Club and Secretaries Young and Harry O. May are working hard to make it a success. This night is a special feature of the club and postals have been sent out to many of the principal carnation growers requesting exhibits of standard varieties or novelties to which the certificate of the club will be given and good advertising is bound to accrue. Exhibits from a distance must be expressed prepaid and addressed to John Young, 51 West Twenty-eighth street, New York, when they will have proper attention and be staged in an attractive manner.

NOTES.

The annual dinner of the Florists' Club will be at Shanley's, on Broadway near Forty-second street, on the night of February 20. The name of Shanley has a national reputation and is something to tie to providing you want good things to eat. We believe the dinner committee of the club has done its best and it now only remains for the membership to give its support. Tickets, admitting lady and gentleman can be bought at the leading wholesale stores on Twenty-eighth street for $7. An attendance of 300 can be accommodated. The Roman banquet room is to be used and beautifully decorated for the occasion. The time is 6:30 sharp.

Mrs. Wm. Lyons of Bernardsville, N. J., died on January 22, interment taking place at Newark, on January 25. In years past, Mrs. Lyons was well known in the wholesale district of this city as Mary Hart, she being a daughter of James Hart, the oldest wholesaler of the district. A number of fine floral offerings were sent from here to her funeral, noteworthy being those sent by Manager Trumpore of Small's, Alex. Warendorff, Ford Bros. and Patrick Donohoe. Mrs. Lyons was highly esteemed for her many fine qualities of mind and heart and universal sympathy is expressed for her bereaved relatives. She was 30 years of age.

"For humanity's sake, give the horse a square deal." During the past week of icy streets, many of us have been shocked by the brutality of many owners and drivers of horses. A noteworthy exception was Chas. A. Small, managing partner of the firm of J. H Small & Sons. Mr. Small has always been noted for his humane and kindly feelings for dumb animals. Just as soon as the streets became slippery, he had all his horses equipped with a new device, the self-fitting emergency overshoe, to prevent slipping and it is pleasing to state that his good example has been followed by others.

Gabriel the Florist, of 508 Columbus avenue, has been very seriously ill for several weeks with pneumonia, but is now believed to be out of danger. Before coming to this city Mr. Gabriel was for 10 years engaged in the florist business in Paris, France. He is known as a fine designer and decorator and it is hoped that he will soon again be able to attend to business.

A. Ehrmann, whose store is at 2112 Broadway, executed a noteworthy dinner decoration on January 16 at the Ansonia hotel. H. L. Stoddard of the Evening Mail gave the dinner to a number of prominent business men, Vice President-Elect Sherman being the guest of honor. The decoration consisted largely of an elaborate display of poinsettias.

The sympathy of all branches of the trade is extended to J. Walter Reimels on the death of his wife, a bride of but seven months, January 20. Mr. Reimels is well known to those who deal with the New York Cut Flower Co., his father, John Reimels, being a well known grower and prominent citizen of Ozone Park, Woodhaven, L. I.

The New York Fleischman Stores, which was recently incorporated to take over the floral business of Joseph Fleischman, has leased from Walter J. Salomon the corner store in the Bristol building, at 500 Fifth avenue, northwest corner of Forty-second street.

Visitors: E. J. Fancourt, Philadelphia, Pa.; J. N. Champion, New Haven, Conn.; Patrick Welch, Boston, Mass.; E. Allan Pierce, Waltham, Mass.; S. J. Reuter, Westerly, R. I.; John C. Hatcher, Geo. S. Hatcher, and family, Amsterdam, N. Y.

European Horticulture.

FROM THE FRENCH TRADE PAPERS.

FORCING HYDRANGEA PANICULATA.—This plant forces readily enough. For cutting it is necessary only to lift the plants during the fall and pot in rather small pots, keeping the atmosphere very moist and the plants well protected from the sun's rays. The branches should be pruned rather short, as it blooms on the new shoots; when the buds show, more light and air may be given. For plants in pots we begin later, in February or March, keeping the plants nearly dormant up to that time; then place in a temperate house, and good bloom should result about the middle of May.

GERBERA HYBRIDS.—One of the principal attractions of the Paris autumn flower show was the magnificent collection of cut flowers of the new gerbera hybrids. These new and charming flowers were shown by Adnet, of Antibes, who, in the three years since their first introduction, has obtained a long series of remarkable colorings, from pure white through the various shades of red and yellow, orange and salmon. Six of the most distinct have been named, and have received certificates of merit.

PLANTS POISONED BY AMMONIA VAPOR.—A carload of azaleas arrived in Berlin from Dresden recently with their foliage blackened. Prof. Sorauer pronounced it ammonia poisoning, and on investigation it was found that the car had carried cement, and later sulphate of ammonia. Remnants of these two substances left in the cracks and on the car floor had combined chemically, freeing ammonia gas and destroying the azaleas. The railroad company was obliged to pay damages.

ROSE LYONS RAMBLER (Climbing polyantha).—A new coloring in the Crimson Rambler group. Foliage deep green; flowers numerous (25 to 40 in the cluster), perfect cup shape, petals very bright rose, shading to carmine, with a large silver white guard. This variety has received medals from the Horticultural Society of the Rhone, the exposition at Dijon and the Lyons Horticultural Society.

ACONITUM WILSONI.—Received among recent importations from China, this aconite is one of the finest acquisitions for the border; the largest and most majestic of the aconites, for its very straight, strong stalks easily attain five or six feet in height. The flowers are large, a pretty deep blue, and borne in long terminal branching spikes in August and September.

DWARF PETUNIA, ROSE PINK.—This striking new petunia comes from M. Bruant, and is the best petunia for beds or borders. The color is an extremely fresh and pretty rose pink, the flower semi-double, and very abundant, and, best of all, the stalks strong and stiff, instead of lying upon the ground after the manner of the older sorts.

CINERARIA HYBRIDA MATADOR.—A dwarf plant, foliage broad, light and spreading; flowers carried showily above it, of a brilliant but deep and beautiful red. It is bound to become a most popular variety. It comes 50 to 60 per cent true from seed, and is an entirely new and pleasing color.

CHARLES BALTET, celebrated pomologist and nurseryman, of Troyes, France, who died November 24, 1908, at the age of 79 years was widely known, and presided at the first French pomological congress in 1856, since which time he has been constantly active in horticultural lines.

DWARF WHITE DOLICHOS.—Grows not over two feet high, with long spikes of white flowers, which are succeeded by ornamental, creamy white pods. It likes a warm, sunny location, and is best started in March or April and set out in May.

ASTILBE GRANDIS.—A new early white variety introduced by Vilmorin from China; its great merit is in its adaptability to outdoor culture, as with its full growth and plentiful foliage it forms handsome masses or single specimens.

THALICTRUM DIPTEROCARPUM.—A new variety from western China; glaucous green foliage, resembling T. aquilegifolium; flowers in loose panicle, 10 inches long, lilac in color, contrasting with the pale yellow stamens.

A NEW Anemone Japonica, White Giant, is distinguished for the large size of its flowers, which are semi-double, pure white; it was recently awarded a certificate of the first class by the Holland Bulb Society.

TUNICA SAXIFRAGA, double, a new variety from Dedemsvaart, Holland, is a great improvement on the single variety, and both are said to be very desirable for borders or planted among bulbs, etc.

CAMPANULA LONGYSTYLA.—A new hardy campanula from Trans-Caucasia; the stalks, branching from the base, grow about four feet high and produce drooping bells of a pretty violet color.

HYDRANGEA ARBORESCENS GRANDIFLORA.—A novelty of Lemoine; very hardy shrub, with panicles of large snow-white flowers, blooming June to August; adapted also for forcing.

NEW ROSE, MISS EVA (Tea).—Dark foliage, medium bush, bud very long, on a long stem; flower large, double, opening well; color deep, brilliant, saffron yellow.

ROSES SCARCE.

The feature of the past week was the scarcity of flowers. Everything in roses was very scarce; all the growers say they are off crop. It was very difficult to get stock enough to go around and dealers with late orders were put to great inconvenience to get them filled with anything like satisfactory flowers. The volume of business was not large; in fact, it was quiet all around. Had there been much demand, prices would have gone skyward quickly; as it was, there was no advance. On Monday (January 25) there was quite a change, there being a noted increase in the quantities of stock arriving over the shipments of a week ago. Bulbous stock is increasing rapidly in quantity. Tulips in various colors and daffodils (Golden Spur) are now found in all the commission houses. Freesia of good quality is in stock and sells well. The supply of good sweet peas is also much better and they sell readily. Snapdragon is scarce but the growers say that a little sunshine will soon bring out a good supply. The commission houses report a fairly good out-of-town demand, particularly in the better class of flowers. This city is getting to be quite an orchid center and several large orders were shipped last week. Cattleyas were never finer than this season, some very choice stock being seen the past week.

NOTES.

The monthly meeting of the Florists' Club February 2, is to have as a feature an exhibit of carnations. All the new ones of this vicinity will be there while quite a number of growers bidding for national popularity have been invited and it is expected that the exhibition will be a notable one. Joseph Heacock and Albert M. Herr, fresh from the national show at Indianapolis, will give a résumé of what they saw, and their interesting talks, together with other speakers, will make this a memorable meeting.

There have been several changes in the forces of the commission houses. Robert Shock has resigned his position with the McKissick Bros. and joined the ranks of the salesmen with M. Rice & Co., the florists' supply dealers. Herman Krienberg has also left McKissick's and enlisted under the Niessen banner, where he will certainly find plenty to do. Charles Grey, formerly with Edward Reid, and W. J. Baker, have gone to McKissick's. Harper Hetherington has also joined the force here.

The store windows are now brilliant with decorations of azaleas which are to be had in all shades of pink—very shapely plants. Pennock Bros. had a very pretty decoration in shades of pink using azaleas, cibotiums and modèux baskets of pink roses, pussy willows, lilac and Adiantum Farleyense. The bottom of the window was covered with blue plush velvet on which was laid miniature bouquets in small papers.

Edwin J. Fancourt, the secretary and popular representative of the Pennock-Meehan Co., was married on Wednesday last to Miss Elsie Hodson of Roxborough. The best wishes of the trade generally will be extended to this couple for a long and happy life.

Robt. Craig, John Westcott, Julius Roehrs and Daniel Donoghue sail on Saturday, January 30, for Cuba and the Isle of Pines. They expect to be gone from three weeks to a month. The trip is mostly for rest and recreation.

Alexander Scott left on Monday last for a two months' stay at Summerville, N. C., where he goes for health and recreation, he being vice-president of the Golf Club there.

Victor Redinour, who has been with Gracey and later with Ehret, has purchased the business of J. Wolff, Jr., of Ridge avenue and Dauphin street.

The Leo Niessen Co. is handling some very choice white laelias and cattleyas. They report business a trifle slow but satisfactory.

W. Atlee Burpee and W. Atlee Burpee, Jr., sailed on the Oceana on Saturday for a month's tour of the West Indies.

At McKissick's the features are choice freesias and a fine lot of spring flowers, tulips, daffodils and sweet peas.

H. F. Michell is spending a few weeks in Florida as is also J. Siddon Pannock.

K.

Boston.

ROSES SCARCE.

The week started in with a solid winterish appearance in the way of a heavy snow fall. Following this we've experienced lots of rain and a few balmy spring days. In spite of these sensational turns the general list of stock has shown a slight improvement. Funeral work has been more brisk. The rose market has grown remarkably short and prices are high. American Beauty, though coming in slowly, is in prime condition. A superb lot is available and bringing $6-$7.50 per dozen. The demand is not heavy, just enough to keep the stock moving well. Richmond has improved somewhat. Killarney is unreliable and is rapidly losing favor. Bridesmaid has been practically abandoned by the leading growers. Chatenay, whose one fault is its inability to produce profits for the growers, is available only in small lots and these are of an ordinary quality. Carnations are selling somewhat better and prices hold well, with very little variety of grades. The best are bringing $3 per 100. A stock of jonquils embracing the best qualities of these spring flowers is with us and find a ready market. They easily bring $4 and the selected class returns $5 per 100. Easter lilies and callas are unusually scarce and the cheapest demand $1.50 and in many cases $2 per dozen. Violets are abundant but not selling rapidly.

NOTES.

W. H. Nicholson, whose name easily suggests the highest degree of commercial cultivation, is displaying a line of freesias that is seldom equalled in this market. For many years a successful aspirant for honors in this product he has again shown his ability to eclipse previous records and has a wonderfully attractive flower exhibited in its best form.

W. L. Lewis, conducting a retail store on Main street, Worcester, a consumer attached to the local market, has been petitioned into bankruptcy with liabilities approximating $3,000, assets uncertain. A long list of creditors composed chiefly of local growers hold claims of various amounts up to $500, the greatest amount.

J. S. Philbrick, of Woburn, an extensive grower of violets, had a novel experience January 21 when a handsome fawn chased by hounds ran into his greenhouses and fell exhausted at the owner's feet. Mr. Philbrick cared for the beautiful animal and is holding it for the state fish and game commission.

John Walke, the plant specialist of Salem, is sending to market a collection of handsome cyclamens. His stock is ably handled by his sales agent, Jacob Cohen, in the Music Hall Market.

There will be a meeting of the creditors of Quinn Bros. at the Park Street Market January 30 to decide upon the plan of procedure offering the best advantages for all.

B.

Boston Co-operative Flower Growers' Ass'n

ANNUAL FLOWER SHOW.

The advance premium list of the annual flower show to be held under the auspices of the Boston Co-operative Flower Growers' Association has been sent out by E. Allan Pierce, secretary and treasurer. This is strictly a commercial show run by commercial men; last year's show was a great success and there is every reason to think that the present year's exhibition will be equally successful. There are a number of expert growers in the east and among the better known people taking a keen interest in this show we notice such names as Alex. Montgomery, Wm. Nicholson, Peter Fisher, M. A. Patten, Wm. H. Elliott and many others. The final premium list will be issued about February 1, but there are in the advance list 62 different classes for carnations, roses, sweet peas, violets, bulbous stock and many other flowers, including a $25 silver cup for the best 12 pots of Easter lilies offered by the Henry F. Michell Co. of Philadelphia, $25 and $10 prizes by Anton Zvolanek, Boundbrook, N. J., for collections of sweet peas and a number of prizes given by the Park Street Market. The committee in charge of the arrangements consists of Wm. H. Elliott, Brighton, E. Allan Peirce, Waltham, Geo. Cartwright, Boston, S. J. Goddard, Framingham, Wm. Sim, Cliftondale, and Wm. R. Nicholson, Framingham. S. J. Reuter, Westerley, R. I., Thos. Roland, Nahant, A. H. Fewkes, Newton Highlands, E. A. Wood, West Newton, and A. H. Lange, Jr., Worcester, are judges.

LOWELL, MASS.—Wm. J. Gallagher, 17 Gorham street, disregarded the direction to close his shop on Sunday.

MUSHROOMITIS.—That is the name given to the absorbing pursuit of mushroom growing by a writer in the general press. This writer has queer, wild views on the subject, a sample of which follows: "Growing mushrooms is a mental disease. When the status of the amateur grower is a little better determined by the psychologist, municipalities will establish "mushroom asylums" for the detention of these enthusiasts. The man who eats the domesticated mushroom is bad enough; the man who risks eating the wild ones is worse. But the man who hauls livery stable garbage cans into his basement and sows bricks broadcast into the steaming, smelly compost over which he has done day labor enough to satisfy the Bridewell on a 30-day sentence ought to be in a straitjacket."

Recent Fires.

HIGHLAND PARK, N. J.—The extensive private greenhouses of R. W. Johnson were partially destroyed by fire January 13. The damage to the buildings is estimated to be about $2,000, but in addition to this, thousands of valuable plants were destroyed. The fire started in the boiler house in some unknown manner and was discovered by the head gardener, W. J. Mahan, about 7 o'clock. As soon as possible after the fire, stoves were temporarily rigged up to heat the remaining greenhouses, but it is feared that many hundreds of the more delicate plants were nipped by the frost before the heat could be supplied. Mr. Johnson after a visit of inspection next morning, said that most of the plants were destroyed and he thought the loss would probably be between $8,000 and $10,000, partially covered by insurance.

GRAND JUNCTION, COLO.—A fire discovered January 6 in the building of the Grand Valley Floral Co., burnt out the inside of the building before the water completed the work of destruction. It is presumed that the fire was caused by an overheated furnace. It had been smoldering some time before the night police discovered it. Alarm was immediately turned in and roused the family who lives in the second story. They got out in safety and took refuge in the La Court hotel. The fire department succeeded in confining it to the basement and lower story of the building. The interior was entirely gutted. The loss was partially covered by insurance.

MINOT, N. D.—A sudden blaze January 17 destroyed the entire stock in Valker's Minot Greenhouses and damaged a large amount of furniture. The damage to the building is but slight, several of the windows having been broken by the heat. The fire started in the basement, where the heating plant is located. It had gained a good start before the proprietor Geo. E. Valker, who sleeps in the building, noticed it, and before the department arrived the stock was wrecked. This is a severe loss to Mr. Valker, as he had but recently started in business, but he pluckily and at once commenced repairs and rebuilding.

DUBUQUE, IA.—Fire at Harkett's Floral Nursery January 11 threatened for a time to clean up the place, but the prompt action of the department set aside all doubts. Shortly after 9 o'clock flame and smoke was seen issuing from the cupola of a barn, and a good headway had been gained by the blaze. The Ninth street company was on the spot in excellent time and squelched what for a time looked to be a serious fire. The fire originated from a spark from a smokestack dropping in a pile of hay.

RIVERSIDE, ILL.—Flowers and seeds valued at $3,000 and belonging to the Thomas Martin Seed and Flower Co. were destroyed by fire January 11. The flames slightly damaged an adjacent building, a three-story brick structure, occupied by the Fox Brewing Co. The Lagrange and Berwyn fire departments assisted in checking the blaze, which caused a total loss of $5,000.

JOLIET, ILL.—A fire at the back of the store of Albert C. Rott's (Thompson—Florist) occurred January 13, but little or no damage was done, owing to prompt action in quelling it.

The Seed Trade.

American Seed Trade Association.
Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

F. W. BRUGGERHOFF says the purity, type and general quality of American grown seeds are inferior to those grown 30 to 40 years ago.

THE next meeting of the American Seed Trade Association is now fixed for June 22, 23 and 24 at Niagara Falls, Ont. (Can the association legally meet in Canada?)

REPRESENTATIVE HEFLIN of Alabama proposed an amendment to the deficiency bill last week appropriating $30,000 for the distribution of seeds. The amendment was lost.

F. B. MILLS Co., Rose Hill, N. Y., has established a branch at Washington, Ia., L. D. Langworthy, manager. His firm is occuping a warehouse of four floors, 40x100 feet.

VISITED MINNEAPOLIS: Wm. Hagemann, New York; Arnold Ringier, representing the W. W. Barnard Co., and Alex. Henderson, representing Vaughan's Seed Store, Chicago.

NORTHRUP KING & Co.'s catalogue, costing seven cents postage, eight of its pages being in colors, total of 136 pages, is probably the most comprehensive as to field and garden seeds ever printed in the west.

CHICAGO—The onion set market, owing to weather conditions, is very strong at about $2.75 for white; red and yellow, $2.—Visitors: L. W. Wheeler, Braslan Seed Growers Co., San Jose, Calif.; W. J. Fosgate, Santa Clara, Calif.

VISITED NEW YORK: C. P. Braslan, San Jose, Calif.; Ernst Bitterhoff, of August Bitterhoff Sohn, Berlin, Germany, growers of lily of the valley pips. This firm is represented in the United States by McHutchison & Co., of this city.

THE reports on the onion seed crop in the Canary Islands, January 26, are somewhat contradictory but Wildpret Bros. assure us that a larger acreage was planted last October and, if the crop turns out satisfactorily, it will be about one-third larger than that of last year. Even under the same conditions as last year, which were not very favorable, the crop will be much heavier.

AUGUSTUS H. GOODWIN and wife, formerly of Chicago, now of New York, are spending the winter at the Villa Igiea Grand hotel, Palermo. The place is 150 miles from Messina. Mrs. Goodwin gave an informal tea at Villa Igiea on January 2 to the visiting Americans in Palermo for the purpose of organizing an American relief board to assist in aiding refugees. Some of those present were American Consul and Mrs. Bishop, Mrs. Higgins, wife of the late Governor Higgins of New York; Miss Charlotte Higgins, Mrs. and Miss Cameron, Sydney Alexander and wife, Miss Frances Alexander, James Valentine and Harold Martin, all of New York, and Mr. Nimick of Pittsburg. Latest reports show Mr. and Mrs. Goodwin were at Rome and intended to go from there to Abbazia.

PANSIES.—Erfurt seed growers class pansies among the most capricious of seed yielding crops, according to a German contemporary. The perpetuation of highly improved strains is especially beset with manifold difficulties, they declare, since the tendency manifest in the finest varieties of pansies to revert back to the most common types, from which they sprung decades ago, is so great and all-persistent as to require complete isolation in the field and the most painstaking of care at seeding time to prevent quick deterioration. Then, too, the more perfect a variety or the higher developed the type of which the variety is a representative, the greater the propensity to sport and at the same time the disinclination to be fertilized with pollen from plants of their own set, so that the most desirable of large flowered, superbly colored strains produce but very few seeds and at some particularly unfavorable seasons none at all, while pansies of the ordinary grades bear seeds in great abundance. All of which goes to show that there are good reasons for the great difference in price between seeds of the best true strains and those of the more common kinds of pansies.

Jesse E. Northrup.
Senior Member of the Firm of Northrup, King & Co., Minneapolis, Minn., Celebrating Its Twenty-Fifth Anniversary This Year.

American Seed Trade Association.

A meeting of the American Seed Trade Association was held at the Hotel Astor, New York, January 22, with the following in attendance: Watson S. Woodruff, president; M. H. Duryea, second vice-president; C. E. Kendel, secretary; Chas. Dickinson, Geo. S. Green, Howard M. Earl and S. F. Willard, members of the committee, and A. L. Don and W. Atlee Burpee by invitation. It was decided to hold the convention June 22-24 at Niagara Falls and the Clifton house on the Canadian side was chosen as headquarters. Details of rates, programme, etc., will be announced in due time.

C. E. KENDEL, Sec'y.

Should Seedsmen Guarantee Crops?

Not being a seed dealer, it is somewhat difficult to say what I would do—and what I would not do as such, but as a seed buyer and planter I desire to say, that it would be impossible to guarantee a crop. I am growing seed for my own sowing, for the production of a few vegetables which I have improved and perfected; this seed I know to be of high germinating vitality and purity, but I would not under any circumstances guarantee a crop from these, even though they were sown by my next door neighbor and yet I know, that he could, as well as I, produce a fine crop, with weather conditions favorable and a proper regard for the conditions necessary for seed germination and plant growth.

My complaint of the seeds I buy from the seedsman, is not to the effect that they don't grow, but that they are not true to name. A seedsman may assure me that his seeds will grow, and though I have full confidence in him, I would not think for a moment to take his word for it. In this age of the test box, what's the use of depending on any man's say so? Unfortunately, however, the seed test box does not tell me anything of the purity of the seed so tested, and the seedsman, though he tells me in his catalogue of the purity, fine quality and immense productiveness, is afraid to stand back of it with a guarantee.

The seed above referred to of my own growing, I would be willing to send out and guarantee description as well as purity. Like begets like, is a fundamental law upon which rests all human progress and, while I know that a species of plant of any kind has a tendency to vary, the production of sports in a crop grown from pure pedigree seed is of a very insignificant nature.

A few years ago I purchased from a New York seed firm among other seeds a package of carnation seed. This seed was on the "novelty" page and was 25 cents per package. It was to be a mixture of different colors, even a yellow one among them; when I opened this package I found instead of seeds another package; inside of this was slipped a still smaller package and in this last one I found this precious seed. There were only a few of them, I counted them (though very small seeds)—I forgot the number, but every one grew and produced a plant. The carnation is my favorite flower, therefore, I gave those plants thorough care; now imagine, if you can, my disgust when those plants bloomed. Every blossom was simply a very common, small, white carnation, no very large yellow, no rare pink, nor that large rose colored carna-

tion I was promised. Some of my experience with the seedsmen leads me to the conclusion that, if promised mixed seeds you get them straight and vice versa. Last season I bought from a New York state firm, a bushel of Hudson Wax beans and three pounds of Satisfaction cucumber. Later in the season I sent for more bean and cucumber seeds from the same firm. The first shipment proved as near right and true to name as I have reason to expect, but the beans of the second shipment, instead of Hudson Wax beans were, a, to me, worthless green bean. The cucumber, instead of the long slender green, was simply a short, stubby, inferior white spine. The Jersey Pickle seed, for which I paid a special price, owing to the fact that it was a very much improved and perfected variety at great expense—proved to be the Chicago Pickle almost worthless in this market. My financial loss just in these few transactions was over $300, yet I never sent in a bill for damages, not even a complaint—what's the use?

But now, Mr. Seedsman, just between you and I, the planter really has (if you will pardon the slang) a kick coming. L. H. Vaughan, the Chicago seedsman, in an article in the R. U. G. recently said: "In closing we should like to ask, what proportion of the thousands of orders filled by the seedsmen of this country do not give satisfaction?" Now, please don't take it for granted that because you did not get more complaints, all those seeds gave satisfaction. If you could hear the complaints of the market gardener on our market or in our Association hall you would be convinced to the contrary. Again Mr. Vaughan says, "How long do you think a large seedsman could do business on a reputation for quality, without entering into the real merit of the seed in question?" He can do business in his way until someone will come to the front with better seed, or until compelled by law to stand back of his description of purity and quality. As it stands now the seed buyer has no choice: he may change from one seedsman to another, but in so doing he will not make much or any improvement of his seeds.

I have for some time given expression of the condition of the seed trade in the public press, and I wish to assure the seedsman that I am not actuated by a spirit of antagonism, but by a desire to better present conditions if possible. The planter loses thousands of dollars annually, owing principally to the fact of inferior seed or seed not true to name. In closing let me suggest to the seedsman: When you have that next convention, would it not be well to invite some real growers of vegetables and talk it over before resolutions as to non guarantee are passed? I sometimes think this would prove very beneficial to both seed dealer and seed grower, as well as the planter.

Girard, O. J. H. BOLLINGER.

[While Mr. Bollinger here mentions two aggravated cases of disappointing results from his seed purchases, he fails to name any general percentage of errors which he has experienced in dealing with seedsmen. It seems to us that this subject of error in the seedsman's work should be considered on the same basis as all error applicable to human effort in other industries. There is no dry goods merchant, grocer or druggist whose annual business will not show a certain percentage of error. Cases will occur in which goods ordered and paid for mysteriously disappear and are never found, and for which money must be repaid to the customer or order refilled. Cloths, ribbons and manufactured articles are often found deficient in quality. Canned goods, sugar and cod fish are occasionally of poor quality. Drugs of materially different nature from those sold are sometimes delivered, all of which proves that so long as "to err is human" there will be well grounded complaints made and adjusted in every mercantile house, whether that of the seedsman, druggist, or grocer.

The question then, as it relates to the seedsman, whose products from every part of the world number, with a large mail order house, 3,500 varieties, is whether these contain any larger percentage of items subject to criticism and unsatisfactory to the buyer than do the hundreds of thousands of articles of merchandise handled by other trades. A further consideration must be given to the fact that many of these seed items are produced in foreign lands, labeled in a strange language, carried 5,000 miles or more and handled under different customs. Conditions of soil, temperature and climate must also carry a further allowance. If, after considering all of the above, it is proven by well conducted tests and by reliable statistics of other trades that the seed trade contains a larger percentage of unrighteousness than any other industry, then radical remedies should be sought, not sooner. And in spite of the present half crazy tendency to legislate, it seems to us that no legislative action affecting the seed industry bearing a prison penalty for error should be inaugurated without ample proof that this industry is so far out of line with the other merchandising of the country, that it should be singled out and made a special target for proposed drastic laws. ED.]

Imports.

During the week ending January 23, imports were received at New York as follows:

Vaughan's Seed Store, two packages seed.

P. Henderson & Co., four packages seed.

H. F. Darrow, six bags seed.

Stumpp & Walter Co., one barrel seed, five cases bulbs.

To others, 1655 bags, 34 packages, two cases seed.

THE SEED TRADE.

CONTINUED FROM PAGE 31.

Livermore, Calif.

January 20.—Seed crop prospects never looked brighter than at present writing. We have had warm rains and plenty of them, but if these continue much longer, the complexion of things will change very much. The season was late, affording growers none too much time to get in the crops. It is still raining very heavily and I am afraid the Santa Clara lowlands will suffer. The island country around Stockton and Sacramento is partly flooded and reports from this section are not of a comfortable nature.

C. C. Morse & Co. have a nursery in Livermore valley, with Jas. Vallance, manager. This firm is turning out some fine nursery stock, clean and well rooted notwithstanding the dry summer season.

N.

Proposed Tariff-Legislation Changes.

ED. AMERICAN FLORIST:—

We note that both the American Seed Trade Association and the American Association of Nurserymen are making strenuous efforts to get placed on the free list of import articles hyacinths, tulips, narcissus, crocus, jonquils, lilies and lily of the valley. The writer, who has been calling on the seed and nursery trade in Great Britain and Ireland personally for 32 years, begs to draw your attention to the auction sales of Dutch bulbs, held in all towns and great villages in the United Kingdom weekly in the season, which are ruining the bulb trade with the legitimate seedsman and nurseryman, and it is his belief, that, when the act comes into force, it will be highly detrimental, as far as bulb trade is concerned, to the nursery and seed trade in the United States. With much esteem.

R. VAN DER SCHOOT,
Of the Firm R. Van Der Schoot & Son.

Jubilee Flower Show, Haarlem, 1910.

A matter of importance to buyers of Dutch bulbs for 1910 is the following:

The opening date for this show to which we have already referred is now definitely fixed for March 23, 1910. Consequently it will be open before Easter to be closed after Whitsuntide (May 15). The show will be divided into a permanent exhibition in the open and three temporary shows in buildings. The cooperation has been obtained of Boskoop, Aalsmeer and other important horticultural centers and the show will therefore afford a splendid opportunity of giving a very complete idea of Dutch horticulture, especially as far as bulb culture, nursery stock, trees, shrubs and flowers are concerned.

The first temporary show is to be held at Easter, the second later in April, during the flowering season of the bulb fields, and the third in the early days of May. Prince Henry of the Netherlands has most kindly consented to be the patron of the exhibition. Queen Wilhelmina and the Queen Mother are also patrons of the society, which organizes the show to celebrate its half-centenary.

Business Conditions.

Birmingham, Ala.—The Amzi Godden Seed Co. states that the mail order business is now in full swing. The volume is somewhat larger than last year but it started later than last year, due to the unusually favorable weather conditions in January, 1908. The prevailing high prices do not appear to retard buying either of garden or field seeds.

St. Paul, Minn.—L. L. May & Co. say that their receipts are somewhat ahead of last season up to this date and attribute this to the fact that their catalogues were out 10 days earlier than last year.

Washington, D. C.—F. W. Bolgiano & Son report that mail order business is about 25 per cent less than last year and this is attributed to the early open winter and the expectation among gardeners of a late spring.

Minneapolis, Minn.—Northrup, King & Co. state that the conditions in the northwest justify them in the belief that this year will prove a prosperous one for the seed trade in that section.

Louisville, Ky.—Wood, Stubbs & Co. report that the mail order business has opened up very well and is considerably ahead of last year.

Floral Park, N. Y.—John Lewis Childs reports business 25 per cent ahead of last year to date.

Currie Bros. Lose Suit.

A case raising a number of points of considerable interest to those engaged in mercantile pursuits was decided January 19 in the federal circuit court, presided over by Judge J. V. Quarles. The suit was brought by R. M. Ward & Co., a well known New York exporting and importing house, against Currie Bros. Co., Milwaukee, seedsmen and florists.

The dispute revolved around a large consignment of Japan lily bulbs ordered from Ward & Co. by Currie Bros., which the latter claimed reached Milwaukee too late, and further, did not conform to the quality called for by the contract of sale. It was on these grounds that Currie Bros. Co. based its refusal to pay for the bulbs, although they had accepted and used a greater part of them.

When suit was brought by the New York house Currie Bros. set up the defense that they had entered into a subsequent distinct agreement with the plaintiff's traveling salesman to return all the lily bulbs which they could not sell, and furthermore set up a counterclaim for $3,000 damages, due to late deliveries and inferior quality of bulbs. Their defenses being held inconsistent by the court the defendants were compelled to rely on the alleged contract with the salesman of the plaintiff. In this defense the court held that they had failed in two respects: Firstly, in not showing that the sales agent of the plaintiff had either the express or apparent authority from his principal to make such agreement, and secondly, if such authority existed there was no memorandum of it in writing sufficient to take it outside the operation of the statute of frauds. The court in consequence directed a verdict for the plaintiff in accordance with the demands of the complaint.—Milwaukee Newspaper.

[The verdict is for $1,000 and the case has been appealed.—ED.]

Canadian Seed Growers' Association.

The fifth annual convention of the Canadian Seed Growers' Association will be held in the Canadian building, Ottawa, Ont., February 4 and 5. The following papers will be presented: "Conditions which Affect the Vitality and Viability of Seeds," by Geo. Michaud, assistant seed analyst, Ottawa; "Observations on the Milling Qualities of Different Varieties of Fall Wheats," by Prof. Robt. Harcourt, O. A. C., Guelph; "Improvement of Corn in Canada," by Prof. L. S. Klinck, Macdonald College, Que.; "The Production of Improved Varieties of Cereals," by Dr. Chas. Saunders, Experiment Farm, Ottawa; "Our Common Barleys and the Field Open for Their Improvement in Canada," by A. P. McVannell, Perth, Ont.; "How Plants Feed," by Prof. Wm. Lochead, Macdonald College, Que.; "The Seed Plot as an Educator," by J. W. Gibson, Ottawa; "The Call of the Land," by Dr. Jas. W. Robertson.

Dr. Jas. W. Robertson, Macdonald College, Que., is president of the association and L. H. Newman, Canadian building, Ottawa, Ont., secretary-treasurer.

Vitality of Seeds Under Water.

J. J. Thornbeer discusses this subject in a leaflet sent out by the University of Arizona Experiment Station. The floods on the land adjacent to the Colorado river makes it necessary either to plant quickly, directly after the summer flood, or to sow, before the flood, seeds that retain their vitality, the latter for preference on account of the start the plants get. Various tests of vegetable and other submerged seeds have been carried out and there are tables showing the percentage of seeds that germinate after 38 days submergence, and of others after 50 days in the boxes. Alfalfa, barley, beans, berseem, carrots, cotton, cowpeas, garden peas and wheat are the least satisfactory under the tests, while others, such as Japanese and Honduras rice germinated in the water and continued growth until the soil became dry in the boxes used in the tests. Fodder plants like maize, African red top cane and millet cannot be depended on to stand submergence for any considerable time, but Johnson and Bermuda grass are not injured by submergence for 50 days.

Court Customs Decision Favors Importers.

The following decision seems right in line with the contention of the seedsmen, namely, that the real and only market value of the seeds grown on contract for them on orders placed one or two years in advance, and grown for their own especial use and in the main from their own stock seeds, is the actual price which they contract to pay and do pay:

Another step in a long drawn-out customs controversy was taken yesterday when Judge Martin in the United States circuit court handed down a decision in the Haviland chinaware cases. Judge Martin finds in favor of the firm of Haviland & Co., holding that the prices at which the firm is invoicing its entries are correct.

The differences between the government and the importers began several years ago and were the subject of an exhaustive investigation by the treasury authorities. Later, a sub-board of reappraisement brought in a decision making an advance amounting to 16½ per cent.

Finally the issue was brought before a sub-board of classification, and later, the circuit court. Testimony was placed before Judge Martin to the effect that the Haviland Limoges ware has no foreign market value within the meaning of the Dingley tariff; with the exception of a small sales department in Paris, the products are sold directly into the United States from Limoges where the French factories are located. Judge Martin, in his decision, holds that there is no foreign market value within the meaning of the tariff.

Under the circumstances, the justice announced that the invoice prices at which the firm originally entered the chinaware must be received. J. Osgood Nichols, assistant United States district attorney, said yesterday that it is probable that the government will ask the circuit court of appeals to review the decision of the lower court.

Levett & Wolff, attorneys for Haviland & Co. issued a statement yesterday in which they said:

"The importance of the court's decision in its bearing on the question of the market value of foreign goods can hardly be exaggerated. It is the first case decided by any court which upholds the right of the importer to carry a reappraisement case into the courts on the ground that there was no evidence before the reappraisement board to sustain their finding. The decision coming at a time when the domestic potters have been filling the ears of the ways and means committee at Washington with stories of awful undervaluations of French china should go far towards demonstrating to the committee the utter lack of basis for these charges. Judge Martin in his opinion after stating that he

had very carefully read all the evidence in the case fully vindicates the importers in the following language:

"There is no substantial evidence that the importers in the case at bar, in their relations with the manufacturing house at Limoges, have adopted prices of invoice on the basis of a purchase price that is fraudulent, dishonest, or even unfair. The history of previous transactions by these importers, their negotiations with the government heretofore, and the prices paid by other importers to other manufacturers of china at Limoges, negative such an inference.

"The opinion is further important in that it practically sustains the construction of section No. 19 put thereon in the German reciprocity agreement. While the court does not in so many words pass upon the construction, Judge Martin quotes, it was evidently approved.

"The court also comments on the methods pursued by the special agent in the case by the statement that the tariff law phrase about principal markets 'cannot fairly be construed to mean that special agents of the treasury department may, by searching France, find some place where there have been some purchases at wholesale at a higher price than in the principal market, and a board of appraisers adopt that as a basis of valuation.' "—New York Commercial, January 20, 1909.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

IN an address before a meeting of nearly 400 Ohio cultivators, J. K. Davis, Sheridan, Ind., laid special stress on the advantages of discing the land before plowing. He contends that it saves horse labor and is of great assistance in breaking up the subsoil; also that it leaves no air spaces in the bottom of the furrow to prevent moisture rising. Incidentally he said he had used this method for 16 years and had recommended it to many and that all who had tried it had been pleased with the result.

FT. WAYNE, IND.—Edward M. Shell was arrested January 14 on a charge of using the mails to defraud, following an investigation of several months, conducted by Inspector A. R. Burr, of this city, and is now out under $500 bond pending a preliminary hearing before Commissioner Logan. It is alleged that Shell wrote to various fruit and produce merchants in Ohio, Michigan, Wisconsin, Pennsylvania and West Virginia, and induced them to ship him goods. Upon the arrival of the goods, it is said, he sold them at cut prices and failed to remit anything to the merchants. The specific charge on which he was arrested was the securing of a shipment valued at $585.67 from Henry Meyers, of Darlington, Wis., in July of last year.

Pure Cultures in Mushroom Growing.

The use of pure or tissue cultures for mushrooms has developed as a result of investigations of the Department of Agriculture, says "Experiment Station Work" for November, 1908. There are now several commercial kinds of these cultures. The use of pure cultures in this case, as in case of butter making, cheese making, and other processes, results in greater uniformity and certainty of the product.

F. A. Waugh, of the Massachusetts station, compared pure-culture spawn with English and French spawn in mushroom culture during two years under ordinary conditions and found that pure-culture spawn is, as a rule, very much better than either English or French spawn, but that there are important points of difference between the commercial pure-culture varieties. These differences consist in color, flavor, form, and, above all else, in productivity. In all of the experiments pure cultures gave larger yields than either the English or French spawn.

"It seems to be one of the chief advantages of the new method of growing mushroom spawn from pure culture that it nearly always gives fresher and more vigorous spawn. The product is nearly always more uniform and of higher quality; but, while this advantage is important, it is not so great as the one already mentioned." As a general result of his experience in mushroom culture, Professor Waugh expresses the opinion "that mushrooms can often be grown profitably as a catch crop in cellars or under greenhouse benches where conditions are favorable. The most important favorable condition to be considered is a cheap and reliable supply of fresh horse manure. It is quite plain, however, from our experience, that the stories of sudden wealth accumulating from mushroom growing are mostly fictitious."

TO THE TRADE

HENRY METTE, Quedlinburg, Germany.

GROWER and EXPORTER on the VERY LARGEST SCALE of all CHOICE VEGETABLE, FLOWER and FARM SEEDS. (Established 1787.)

Specialties: **Beans,** Beets, Cabbages, **Carrots,** Kohl Rabi, Leek Lettuces, **Onions, Peas, Radishes,** Spinach, Turnips, Swedes, **Asters,** Balsams, Begonias, Carnations, Cinerarias, Gloxinias Larkspur, Nasturtiums **Pansies,** Petunias, Phloxes, Primulas, Scabious, **Stocks,** Verbenas Zinnias, etc. Catalogue free on application.

HENRY METTE'S TRIUMPH OF THE GIANT PANSIES, (mixed) the most perfect and most beautiful in the world, $5.00 per oz., $1.50 per ¼-oz., 75c per 1-16 oz. postage paid Cash with order.

All seeds offered are grown under my personal supervision on my own grounds of more than 3,000 acres and are warranted true to name, of strongest growth, finest stocks and best quality.

I ALSO GROW LARGELY SEEDS ON CONTRACT.

List of my novelties in flower seeds for 1908 sent on application.

Mushroom Growing.

ED. AMERICAN FLORIST:—

I have a chance to lease several thousand feet of well aired, cemented and piped cellar room and intend to grow mushrooms. Please tell me about the best way to grow them, the different varieties and the methods of preserving them by drying, evaporating and canning, also the best methods of marketing. A. W.

We advise "A. W." to carefully study the articles on mushroom growing just closed in the AMERICAN FLORIST. These treat the subject more fully than we can attempt to repeat. If the cellar room has ample head room it will pay to arrange the beds in tiers, or shelves, one over the other, thus gaining considerably in area, but one must always bear in mind that a good deal of heavy material must be handled in and out.

As regards varieties, growers have paid little attention to this phase, using the English brick spawn preferably; recently American pure culture spawn has gained a reputation, and we would advise "A. W." to use some of each until results prove which is best for his case.

We were always glad to get the mushrooms and sell them fresh, hence never attempted evaporating and canning. Mushrooms are so easily shipped, and the demand has been so good that it pays best to sell them fresh, at least at first. Aim to make a success of growing before attempting canning. The nicest way is to pack in 1-pound pasteboard boxes, bright and clean, with the grower's name and address printed on same.

MARKETMAN.

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points January 23 were as follows: New York, cucumbers, $1.50 to $2 per dozen; mushrooms, 25 cents to 60 cents dozen bunches; radishes, $1.50 to $3 per 100 bunches; rhubarb, $1 to $1.25 per dozen; tomatoes, 15 cents to 25 cents per pound; asparagus, $4 to $7 per dozen bunches; lettuce, $1.35 to $2.25 per barrel; grapes, 45 cents to 60 cents per pound; Egyptian muskmelons, 75 cents each. Cincinnati, cucumbers, $1.50 to $1.75 per dozen; mushrooms, 35 cents to 40 cents per pound. Boston, cucumbers, $10 per box. Chicago, cucumbers, $1.50 to $3 per dozen; lettuce, $3 to $5 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 30 to 40 cents per pound; radishes, 40 to 60 cents per dozen bunches; asparagus, $2.75 to $7 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.25 per pound; peppers, 40 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound, extra fancy, 14 cents.

C. B. KNUTH

Wholesale and Retail Grower of Bedding Plants,

11801 St. Clair Ave., CLEVELAND, O.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

INDIANAPOLIS, IND.—The department of public parks will establish a nursery early in spring and is in the market for young nursery stock. Address H. Houston Fall, City Florist, Garfield Park, Indianapolis, Ind.

THE forest fire losses in New York state alone during the past year are estimated at nearly $800,000. Of the 700 fires reported 90 are attributed to hunters and nearly 400 to railroad locomotives. A total area of 177,476 acres was burned over of which 50,000 acres were state lands.

LANDSCAPE GARDENER BUTTERWORTH, of Kansas City, Mo., has made a proposition to the Houston (Tex.) Country club to undertake the beautification of its grounds. He visited the place of the Country club, south of the city, and was greatly impressed with the possibilities of the place.

WHEN we are told upon good authority that the San Jose scale will kill a fruit tree in three years and that it is carried by the wind, also by birds and insects, the serious nature of the pest and the necessity for care and watchfulness on the part of nurserymen and cultivators generally will be apparent.

ONTARIO, CALIF.—This city is fast becoming one of the greatest rose centers in southern California. During the past few weeks local nurseries have shipped over 100,000 rose plants to all parts of the United States and Canada, some even going to Alaska. Before the season is over the shipments are expected to exceed 250,000.

BEATRICE, NEB.—A. E. Hetherington has purchased the Gage nursery farm and will occupy it March 1. This farm consists of 20 acres of good, productive land and it is the intention of Mr. Hetherington to convert it into a truck farm which he will operate on a large scale. He will use an automatic planting machine requiring three men to operate and with a daily capacity of 20,000 plants.

Brown-Tail Moth.

The report of the introduction of the brown-tail moth in some recent importations of French nursery stock will arouse widespread alarm among those who are acquainted with the ravages of this most offensive pest, and it may result in the demand for a strict quarantine against places where the insect is domesticated. The experience of the state of Massachusetts in dealing with the brown-tail and the gipsy moths, and the very unsatisfactory results which have accompanied the warfare against them should be sufficient warning to the other parts of the country. No effort should be spared to prevent the further dissemination of these pests, for once acquired they are evidently almost impossible to destroy. The only safe way is to cease purchasing material from the infected districts which may, by any possibility, carry the eggs or pupæ.

The advisability of fumigation of infected stock has been discussed, but I believe it would be safer to destroy the stock by burning. I doubt if fumigation by hydrocyanic gas as practiced in some instances for San Jose scale will be sufficient to insure safety from the above mentioned moths, and to use a longer exposure and a stronger dose of gas would, I feel sure, greatly injure the plants. Of course, fumigation can only be used in the case of dormant stock in any event. It is well to remember the homely old saying: "An ounce of prevention is worth a pound of cure." All packing material contained in shipments should be burned at once as this may be the most dangerous source of infection.

JOHN F. COWELL.

The Douglas Fir.
Pseudotsuga Taxifolia.

The Douglas Fir.

By some this is also called Douglas spruce. This important timber tree grows along the Pacific coast from Mexico through the Rocky Mountain region to southern Canada, being found at its greatest perfection in the territory around Puget Sound, where trees 300 feet in height are not uncommon. As an ornamental it is a dark-colored, very rich looking tree of graceful habit, and it is being used extensively in forestry on account of its rapid rate of growth and hardiness. Owing to its extremely large size it should be planted where it may ultimately have unrestricted space in which to grow.

Ohio. W. E. BONTRAGER.

Outdoor Roses.

ED. AMERICAN FLORIST:—

Please advise me whether Joe Hill, Killarney and Mme. Chatenay make good summer roses outdoors.

Tennessee. G. W. C.

Killarney and Mme. Chatenay succeed quite well as bedding roses in most parts of the middle north. Joe Hill does well in the south, but is too tender for open culture in the north. Wm. R. Smith, Maman Cochet and White Cochet, Gen. McArthur, Wellesley, Rhea Reid and Triehr Von Marshall thrive and bloom abundantly in the middle west.

E. G. H.

Shade Trees.

The haphazard method of planting trees, that is often practised on estates newly laid out, and in the streets of rising localities, does not augur well for the effect these trees will have in the future. They are carelessly lifted in the first place, no effort being made to preserve the small feeding roots, while the heads are left entire. Small wonder that such trees fail, even if well looked after when planted, but this they are not. They are too often left to the mercy of the wind without as much as a stake to prevent them shaking about, in a small hole which freezes all through when the weather is severe and serves as a basin to catch and hold water in rainy weather. These methods contrast badly with the proper methods frequently described in these columns, the roots being carefully lifted and trimmed and the heads being cut back a little to ease the roots after planting. In planting these are spread out and covered with light soil while the trees are so carefully supported that high winds fail to move them. In consequence they rapidly take hold and are soon re-established.

Yet nothing is so restful to the eyes and nerves of the city or town dweller as trees and it is a pity that such practises exist as they are bound to have a bad effect. Trees for street and boulevard planting must not be of the cheap and nasty order offered by foreign nurserymen. They have often a hard struggle even with the best of care, when their roots extend under sidewalks or macadam roads and nothing but the best and most healthy specimens that have been properly looked after from the seedling stage upwards should be used for the purpose. They must have been transplanted, not once but several times, in the youngest stages, every third year or so, in fact; then we have a tree with a good, well balanced head, a straight trunk, yet not drawn up, as it would be had they been grown close together right along, and a fine mass of hungry feeding roots that are ready and able to push through any kind of soil and send up sustenance to the forming leaves and branches.

In cutting back the heads, this must not be done in a careless manner, but due attention given to the form and the natural habit of the tree. It is always good policy to thin out the center rather than clip the points of the branches as a thinly disposed head, sufficiently above the roadway to allow of walking and driving beneath, is to be aimed at. Especially is this the case with sycamores, oriental planes and others with heavy foliage and close heads. Even elms and box elders are not improved by having the ends of the branches taken as they shoot out a thicket of new growth which keeps the light out of the center and leads to a misshapen head. With regard to the size of the trees a much earlier display can, of course, be made by planting large, mature specimens than by planting smaller ones and growing them on in situ. But large trees are much more expensive at the nursery, need more care

and trouble in planting, and after treatment. Still large trees of elm, Carolina poplar, maple and others are frequently transplanted and do well, making a show in about four or five years that could not be obtained from younger ones in triple the time.

So much depends upon soil and situation that one cannot well recommend any special kinds as suitable for all occasions. The American elm is a grand shade and street tree thriving well on light soils but losing its foliage rather early in the season. The maidenhair tree is a splendid town tree of fine proportions and very distinct habit. Oaks generally are not satisfactory, especially in smoky towns. The Carolina poplar is a fine grower, an ornamental, quick growing tree and makes a fine specimen but it is about the dirtiest tree in existence—unless it is the horse chestnut—always dropping leaves, twigs or branches. The oriental plane and the American sycamore both do well in towns while many of the maples and the box elder do well though the somewhat spreading habit of the latter makes it more suitable as a windbreak to choicer things or for planting in breadths for shade and shelter. The maples are so beautiful in fall and early spring they should be planted freely, and there are many others to select from. But when planting, plant good trees and plant with care. Better plant half the quantity and look after them than a large number and neglect them.

French Vineyard Fertilizers.

CHEMICAL MANURES BEST.

Consul D. I. Murphy reports that a French journal publishes the conclusions reached by Professor Zacharewicz, of the French Department of Agriculture, regarding the best and most profitable fertilizers for vineyards. Briefly put, they are as follows:

(1) That chemical fertilizers, judiciously selected, exercise the greatest influence on the growth of the vine and the character of the grape; (2) that the mixture of nitrate of soda with sulphate of potassium and superphosphate of lime has, for the last nine years successively, yielded the most profitable returns; (3) that the action of nitrate of soda on the vine is not affected by dry weather; (4) that chemical fertilizers improve the quality of the grapes—whether destined for table use or for the making of wine.

It will interest our American grape and wine growers to know that in this region exceedingly bad results have followed the employment of certain fertilizers. Not far from Bordeaux a large grower spread over his vineyard a few years ago quantities of alluvial soil mixed with stable manure. As a result, his crop of grapes was larger than usual, but his wine was of very inferior quality. The character of the soil appeared to have been so changed or modified that the usual delicately flavored wine was no longer produced.

In the Medoc country—famed for its red wines—the growers exercise the most scrupulous care in the selection and application of fertilizers. They understand that, while the vine is hardy, it is exceedingly sensitive and that the quality of its fruit may be injured by a very slight change in the soil.

A vineyard not far from Bordeaux invariably produced excellent wine until one season the proprietor used pieces of creosoted wood for arbor stakes. The grape crop was as large as usual, but the wine was so strongly impregnated with cresote as to be undrinkable. So well understood is this fact of the sensitiveness of the grape vine, that the courts in a suit against a railroad company awarded damages to the owner of a vineyard at Saint Emilion, who claimed that his entire crop was ruined by the proximity of a pile of creosoted ties. It appeared that the ties were so placed that the prevailing breezes during the growing season reached the vineyard laden with the odor of creosote. This so affected the growing plants that when the wine was made, its flavor and bouquet were found to be utterly destroyed.

Old Cedars to Be Moved.

With the planning of a new apartment house in Washington Heights, the historic grove of Lebanon cedars, given to M. Jumel in 1815 by Napoleon, who had received the plantings from the khedive of Egypt, and which have stood since on the old Jumel estate, will be taken up. Through the protests of the custodians of the Jumel mansion the park department has been persuaded to take up some of the trees and replant them in Kingsbridge park, New York, and one will be transplanted in the garden at the Jumel mansion.

Botanists from all over the world and foreigners traveling in America have visited the Jumel grove. There were 18 of the trees, which stood in a rough circle. When they were brought to this country M. Jumel planted them around a fish pond in front of his mansion, in One Hundred and Sixty-first street, which was then a considerable distance from New York proper.

Cotoneaster Rotundifolia.

This Himalayan species is a particularly ornamental one throughout the greater part of the winter, says The Garden, for it fruits well and the berries usually last until the spring months. Curiously, birds do not interfere with the berries of this species while other food is obtainable, but the fruit of some species of cotoneaster is cleared off as soon as it is ripe. C. rotundifolia grows three to four feet high and forms a spreading bush, many feet across. The main branches are well furnished with secondary branchlets, though it is not such a dense-growing plant as some of the others.

PROVIDENCE, R. I.—The Florists' and Gardeners' Club of Rhode Island celebrated its thirteenth anniversary with a supper. The following were among those present: Cornelius Hartstra, Wm. Hill, James Hockey, Chas. McNair, Wm. Appleton, Owen Michael Sweeney, Alexander Macrae, E. A. Appleton, Frank Schellinger

The New Crested SCOTTII FERN.. NEPHROLEPIS SCHOLZELI

NEPHROLEPIS SCHOLZELI

This crested sport of Scottii will hold the same position to all the crested forms of Nephrolepis that Scottii now holds to the Boston. It is entirely distinct from all others and will become even more popular than its parent, with which it is identical in every way except that the pinnæ are subdivided, giving it a beautiful crested appearance.

We have shown the plant at the exhibitions noted below and have been awarded the following honors:

SHAW GOLD MEDAL, St. Louis Horticultural Society, Nov. 3rd, 1908, for "Best plant of decided merit for cultivation, not previously an article of North American commerce."

SILVER MEDAL, Offered by the Society of American Florists, through the St. Louis Horticultural Society, Nov. 3rd, 1908, for "The most meritorious plant or flower of American origin".

CERTIFICATE OF MERIT of the Horticultural Society of St. Louis, Nov. 3rd, 1908.

SILVER MEDAL, Pennsylvania Horticultural Society, Philadelphia Nov. 3rd, 1908, for the best new plant.

CERTIFICATE OF MERIT, Massachusetts Horticultural Society, Boston, Nov. 6th, 1908.

CERTIFICATE OF MERIT, Dutchess County Horticultural Society, Poughkeepsie, N. Y., Oct. 30th, 1908.

CERTIFICATE OF MERIT, Morris County Gardeners and Florists' Society, Madison, N. J., Oct. 30th, 1908.

CERTIFICATE OF MERIT, Chestnut Hill Horticultural Society, Philadelphia, Pa., Nov. 4th, 1908.

We are booking orders now, which will be filled in strict rotation June 1st, 1909.

PRICE: Per doz., $3 50; per 100, $25.00; per 1000, $200.00. Twenty-five supplied at hundred rate and five hundred at thousand rate.

PATTEN & COMPANY, Tewksbury, Mass

LOWELL, MASS.—A bill will be introduced into the legislature by Senator Hibbard for a law permitting florists to deliver flowers for funerals, churches, etc., on Sunday morning up to 11 o'clock.

BEAVER DAM, WIS.—Fire was discovered January 16 in the greenhouses of Joseph Wagner in the rear of his store, and before it could be checked the whole of the west end of the houses, as well as almost the entire stock of plants, were ruined. Mr. Wagner was disinclined to estimate his loss, but it is thought to be in the neighborhood of $3,000. He has been established here about 35 years, but this is his first serious loss. He is quite uninsured.

THE NEW CARNATION

LUCILLE

White Overlaid with Pink

A STRICTLY FANCY CARNATION,

Possessing all the best qualities of our leading commercial varieties.

It commands the highest prices on the market, owing to its beautiful color, size, stem and magnificent form. It is profitable to grow, because its habit and prolificness are all that could be desired, and its keeping qualities are unequalled. $12.00 per 100; $100.00 per 1000.

Viola Sinclair sent out on trial in limited quantities by H. W. Field, Northampton, Mass., has proved to be an acquisition for the average grower. It is early, extremely free, resembles Mrs. T. W. Lawson in color, and a continous bloomer. Worthy of trial by all.

PETER FISHER, CARNATION SPECIALIST. **Ellis, Mass.**

New White Carnation **GEORGIA** **The Best White**

Best for Quality. **Come and See It.** **Best for Quantity.**

This variety is bound to supplant other whites as it not only produces as many or more flowers but every one of them comes with a perfect calyx borne on a long stiff stem, supporting the bloom in perfect shape. This fact makes it greatly superior to other varieties as a money maker. We have 20,000 cuttings in the sand for Jan. delivery. **Rooted Cuttings: $2.00 per doz.; $12.00 per 100; $100.00 per 1000 Satisfaction guaranteed.** See classified "ad" for price list of Standard Varieties.

Henry Eichholz. Waynesboro Pa.

AMHERST, MASS.—O. Bennett Burrill of South Haven, Mich., a graduate student in landscape gardening and floriculture in the Agricultural College, has been appointed agricultural inspector for the Philippine islands. Mr. Burrill is a graduate of the Michigan Agricultural College. He came here from the Indiana normal school, where he was in charge of the gardens. He wil collect seeds, inspect domestic animals, study insect pests and report to the agricultural department of the islands. Mr. Burrill started January 22 for Seattle, and will sail February 2 on the Tsao Maru for Hongkong and from there will go to Manila.

Carnations ROOTED CUTTINGS

NEW INTRODUCTIONS

Mrs. Chas. Knopf, light pink (Knopf),
Ruby, crimson (Knopf),
Georgia, white (Cockcroft),
Mrs. J. C. Vaughan, white (Rudd),
Bay State, variegated (Roper),
Pink Delight (Dorner),
Wanoka, crimson (Wanoka Greenhouses).
Apple Blossom, white, light pink markings (Wanoka Greenhouses),

$12.00 per 100; $100.00 per 1000.

O. P. Bassett, scarlet (Bassett & Washburn), **$8.00 per 100; $60.00 per 1000.**

The two novelties, Mrs. Chas. Knopf and Ruby, give great promise as commercial varieties; both are free producers. We have them both growing side by side with the standard sorts, and they have demonstrated now that they are here to stay. Mrs. Chas. Knopf is at this time especially good, being larger and of better form and color than Enchantress. Ruby is a very large, perfectly formed flower with excellent stem, and it has a good crimson shade, not too dark.

All Plants F. O. B. Western Springs, Ill.

Vaughan's Seed Store,

84-86 Randolph St., CHICAGO. 14 Barclay St., NEW YORK.

Greenhouses and Nurseries: Western Springs, Ill.

Albany N. Y.

The city is about to expend $100,000 upon a soldiers' and sailors' monument to be erected at the northern boulevard entrance to Washington Park. The models will be submitted for competition on May 1, when a committee of judges will select the one deemed most suitable.

The charity ball of January 22 was preceded by a number of dinners for which many table pieces were ordered.

For the care of the park system this year the city has appropriated the sum of $71,000. R. D.

FINDLAY, O.—E. J. Foster & Son have abandoned their down-town store. Miss Emma Barnd, who has been in charge, will occupy a position at the greenhouse on South Cory street.

Rooted Cuttings per 100 prepaid. Coleus 60c, Fuchsia, $1 00; Pilea, 75c; Alternanthera, red and yellow, 50c; Vinca variegated, 80c; Ageratum blue 60c; Heliotrope, blue, 80c. Cash.

Shippensburg Floral Co., Shippensburg, Pa.

SHARON, PA.—John Murchie's boiler gave out January 19 in near zero weather and as no steam could be sent through the pipes, he got busy and hauled a traction engine to his greenhouses, quickly made the necessary steam connections and by firing the engine with about the same energy required in one of the big "hog" engines on the Erie, saved his place from total destruction.

American Beauty ROOTED CUTTINGS

$3.00 per 100; $25.00 per 1000.

Chrysanthemum Stock Plants

Alice Byron, White Bonnaffon, October Sunshine, Major Bonnaffon Col. D. Appleton, Clementine Touset, Mrs Robinson Timothy Eaton, White Ivory, Pink Ivory, Maud Dean, Diana, Black Hawk, $3.00 per 100.

GEO. REINBERG,

51 Wabash Avenue, CHICAGO, ILL.

Mention the American Florist when writing

Dreer's Special Offer of Kentias.

The Stock here offered is all of exceptional good value.

Kentia Belmoreana.

			Per doz.	Per 100	Per 1000

THE GEO. WITTBOLD CO.,
1657 Buckingham Place, CHICAGO.

Springfield, O.

CLUB MEETING.

A well attended meeting of the Florists' Club was held at the office of the Good & Reese Co., January 11. After a short business session R. P. Willis addressed the club upon heating with hot water by forced circulation; this talk proved very interesting, especially to the florists of the south side, of which there are six different firms within three blocks of each other, a central heating plant of this or some other kind to heat these six plants has been considered practicable and would mean a large saving in both fuel and labor.

Harry C. Reeser has purchased the tract of land adjoining Gustav Schneider's place and will erect five houses 20x100 feet each early this spring; he intends growing a general line of plants for the wholesale trade.

Gustav Schneider will increase his plant this spring by adding two 24x100-foot and two 10x100-foot houses.

We had our first heavy snow January 11 and 12, 10 to 12 inches having fallen. W. G.

TOLEDO, O.—An overheated smoke-stack caused a fire January 17 in the one-story frame greenhouse of C. W. Counter on Michigan avenue, near Manhattan boulevard, and before the flames were extinguished the property was badly damaged. The loss is estimated at $500 on building and $150 on contents.

GERANIUMS.

$2.00 per 100 and up. 300 varieties described in our Special Geranium Catalogue

Hardy Pompon Chrysanthemums We are headquarters. 80 varieties $2.00 per 100.

Dahlias We are booking orders for plants next spring, or roots next fall.

Lobelia

Kathleen Mallard, the new Double Blue Lobelia, nice stock from 2-in. pots, 50c per doz., $2.00 per 100, 500 for $9.25.

We have ready to ship the following from 2-in. pots at $2.00 per 100:

Verbenas, Lemon Verbenas, Achyranthes, Black Prince and Minnesota Fuchsias, Coleus, Lobelia (Crystal Palace), Hardy English Ivy, Smilax, Salvia, Dreer's Superb Single Petunias, Dwarf Double Alyssum, Ageratum.

Pots, red standard. Paducah Pottery Co., Paducah, Ky.

If you do not find what you need in our Ready Reference Department, write us about it.

TO-BAK-INE PRODUCTS

To-Bak-Ine Liquid

To-Bak-Ine Liquid has been proven by State Tests to be the

STRONGEST INSECTICIDE

on the market—contains most pure Nicotine (the ingredient that determines cost to us and value to you)—most uniform in strength. All the other To-Bak-Ine Products are equally efficient and reliable.

Cheaper Than Weaker Preparations

TO-BAK-INE LIQUID Kills Thrips, White Fly, Green Fly, Black Fly, Red Spider, etc. PRICES:—¼ pint, 60c; ½ pint, $1.10; 1 pint, $2.00; ½ gal., $7.75; 1 gal., $15.00; 5 gals., $67.50. Write for prices on 10, 20, 40-gal. casks with locked faucet and for complete spraying directions and other information.

TO-BAK-INE FUMIGATING COMPOUND Kills Thrips, Green Fly, Black Fly, White Fly, and other Insects. PRICES: 1-pint can, $2.00; ½-gal. can, $7.75; 1-gal. can, $15.00; 5-gal. can, $67.50. Write for prices on 10, 20, 40-gallon casks with locked faucet and for other information on fumigating.

To-Bak-Ine Fumigating Paper

Send for "Words of Wisdom" Booklet—Free.

To-Bak-Ine Fumigating Paper is the most satisfactory agent for the destruction of Green Fly that has ever been brought to our notice. As you know, we have been heavy buyers of this product, all of which has been used in our own greenhouse.—F. R. & P. M. PIERSON, Scarborough, N. Y.

24 Sheets, 75c; $6.50 case of 288 Sheets.

Each sheet 18 inches long.

To-Bak-Ine Fumigating Powder

Send for "Flowers and Profits" Booklet—Free.

I have used your To-Bak-Ine Fumigating Powder in carnation and rose houses, fumigating in the carnation houses once a week and in the rose houses twice a week. It has entirely kept down Aphis. It leaves no odor on the flowers and has not, in the slightest, hurt either flower or foliage on the roses, as does burning tobacco stems.—WILLIAM SCOTT, Corfu, N. Y.

50-lb. Bag, $1.50; 100-lb. Bag, $3.00.

Send for free 5-lb. sample.

We issue the most complete catalogue in the United States on all Greenhouse Supplies

E. H. HUNT

Ventilators. Evans' Improved Challenge ventilating apparatus. Quaker City Machine Works, Richmond, Ind.

Ventilators, hand ventilating, etc. The King Construction Co., N. Tonawanda, N. Y.

Washington.

MANY SOCIETY FUNCTIONS.

The White House decorators had another chance to display their skill in working out artistic effects, with plants and flowers of every description, when the president and Mrs. Roosevelt were hosts at the second in the series of state functions of the winter, the judiciary reception, in honor of the supreme court. Many other receptions were in progress during the week; dinners and luncheons were in evidence everywhere, and hence the demand for flowers increased to a great extent.

NOTES.

At a dinner given by the Argentine minister and his wife, in honor of the newly appointed American minister to Argentine, and Mrs. Huntington Wilson, the floral decorations were quite elaborate, orchids, white, lilac, and Richmond roses were used extensively. Geo. C. Shaffer executed the work.

The committee which will have charge of the decorations for the inaugural ball, and decorations of Pennsylvania avenue, is requesting bids on this work from the local retailers.

Geo. H. Cooke furnished the center pieces for a dinner at Mrs. Munn's, the Italian embassy and at a banquet at Rauchers all the same evening.

Marche & Co. have an order for a giant wreath which they will ship to Paris. It is made of artificially colored bay leaves.

At a dinner at which Postmaster General Von Meyer was host, J. H. Small used a great number of carnations.

The Florists' Club meeting will be held February 2. Election of officers will be the main business of the meeting.

Answers to Country Life Commission.

The commission on country life, appointed by President Roosevelt, has sent out a list of questions to farmers and all others interested. Following are the questions, and the answers as given by a farmer, says the Wisconsin Agriculturist:

1. Are the farm homes in your neighborhood as good as they should be under existing conditions?

What is meant by good? Do you suspect our morals? We are reasonably law-abiding, and vote as often as permitted.

2. Are the schools of your neighborhood training boys and girls satisfactorily for life on the farm?

No. We train them to go to the city and become lawyers, merchants, frenzied financiers and other honorable and remunerative occupations.

a. Why?

Why? Because we think there is more to eat and more money to buy things to eat near the cold storage safety deposit vaults.

b. What suggestions have you to make?

Gosh! I dunno. Money might be sent to us. We need more automobiles. Don't send cast-off clothing, whatever you do.

3. Do the farmers in your neighborhood get the returns they reasonably should from the sale of their products?

You bet they don't, boys.

a. Why?

Our acres don't produce enough, so that when juxtapoised over forninst our needs, there is a surplus coming our way.

b. What suggestions have you to make?

Race suicide or emigration.

4. Do the farmers receive from the railroads, etc., the service they reasonably should have?

Our transportation people seem to be doing all they can, under the awful load of governing we have been asking them to tote.

b. What suggestions have you to make?

Hang a few agitators.

6. Are the farmers and their wives in your neighborhood satisfactorily organized to promote their mutual buying and selling interests?

Yes. Our wives are not as the wives of some we know. Our wives are all right.

b. What suggestions have you to make?

Be careful about your questions about our wives, or keep away from this district.

8. Is the supply of farm labor in your neighborhood satisfactory?

Yes, at $30 per month and board, and if you keep a good-looking hired girl and a horse and buggy for their use.

9. Are the conditions satisfactory to the hired men?

Under the above conditions I may say yes. More girls would only be a source of trouble.

b. What suggestions have you to make?

One girl and a horse and buggy per man, with use of owner's automobile to attend divine worship.

10. Have the farmers in your neighborhood satisfactory facilities for doing their business in banking, credit, insurance, etc.?

Oh, yes; we have no trouble to bank anything we have, and can always borrow on a first mortgage; the second, third and fourth mortgages are not so easy.

a. Why?

The banker usually has heart failure over a second mortgage.

11. Do the farmers and their wives and families in your neighborhood get together for mutual improvement?

No. We lie about each other too much. Let's not go into this, please.

12. What, in your judgment, is the most important single thing to be done for the general betterment of country life?

There isn't a single thing. Life is an endless round of joy in the rural districts. All we need is more than we've got. We are born healthy, live frugally, marry the best we can, divorce seldom, obey the law (we don't need much law in the country), vote as we're told—most of the time; are long on common sense and don't ask impertinent questions of strangers.

Stop the Wind in the Greenhouse.

WORDS FROM TWO EASTERN MEN.

"Your Paint and Putty saved us, for the time being at any rate, a complete rebuilding. We used a barrel of the Twemlow Putty — it is great stuff."

"Your Twemlow's Old English Liquid Putty is certainly great stuff. Two winters ago there were two houses which the high winds shifted a little during a cold spell, which left quite an opening between the glass and the woodwork. It was zero weather and too cold to do anything outside. I was puzzled to know what to do. I took the putty bulb and went over it on the inside, just to tide over the cold weather, **but to my surprise** it staid and is as good to-day as if put on under the most favorable circumstances.

"I write this because it may be of some service to you to know it."

SLUG SHOT KILLS SOW BUGS Sold by Seedsmen.

Hammond's Paint & Slug Shot Works, Fishkill-on-Hudson, N. Y.

New Orleans.

The Horticultural Society held its semi-annual meeting January 21, and aside from interesting talks on plants and flowers, the business of the evening was taken up with considering the results of the November flower show and laying plans for another exhibition in the spring of 1910.

The reports of Secretary C. R. Panter and Treasurer John Eblen were read, and it was shown that a loss of $326 had been sustained on the flower show. The original loss was about $600, but the members who won prizes donated the amounts to the association, bringing the loss down considerably.

A letter was read from Prof. Wilmon Newall, of the State crop pest commission, warning the horticulturist to look out for the fish-tailed moth, a destructive immigrant from France. The moth, the professor wrote, had been found on plants and flowers imported from France to New York.

Richard Eichling, manager for U. J. Virgin, read an interesting paper, entitled "The Forcing and Growing of Bulbous Stock for Cut Flowers in the Southern States."

J. A. Newsham exhibited some very beautiful Oncidium splendidum. Mr. Newsham gathered the plants himself while in Central America some months ago.

Snapdragons and Their Culture.

Among the many beautiful hardy plants that can be flowered the same year as the seed is sown, it is doubtful whether any are capable of giving such good and lasting displays as the snapdragons, a popular name applied generally to the many varieties of antirrhinum. Strictly speaking, says The Garden, these plants are perennials; but as they may be so easily raised from seed, most cultivators do not trouble to retain old plants through the winter unless extra large specimens are required, the modern practice being to treat them as annuals.

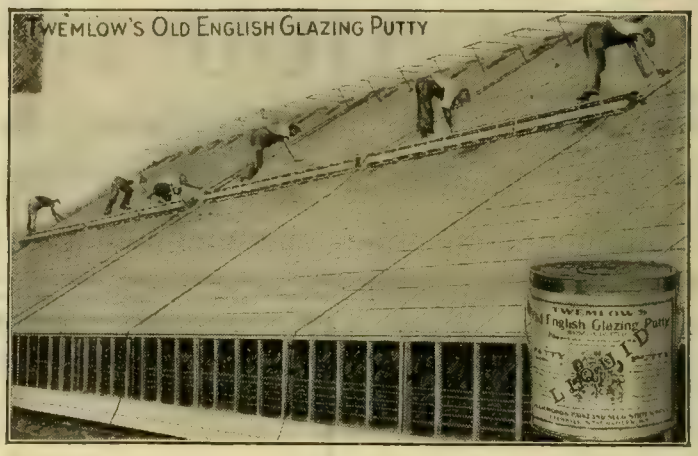
To obtain plants to flower the same year, seeds must be sown under glass during January or the early part of February, employing well-drained shallow pans or boxes as receptacles. A good soil mixture for sowing the seeds in is composed of loam (one part), sharp sand (one part) and leaf-soil or well-decayed manure (one part), the whole being passed through a small-meshed sieve, so as to render it fine and suitable for receiving the rather small seeds. Some of the rougher portion must be retained for placing over the drainage material in the bottom of the pans or boxes, as this will prevent the finer particles being washed down into the drainage, which, if allowed, would prevent a free escape of superfluous moisture.

When the rough and fine soil has been placed in position and made moderately firm it should be within half an inch of the rims of the receptacles, and the surface must be made quite level, when it will be ready for the seeds. As mentioned above, these are rather small, hence care will be needed to scatter them evenly and thinly over the soil. A light sprinkling of very fine sandy soil is all the covering needed, and this may be pressed down gently with the bottom of a clean pot. Water well with a very fine-rosed can, cover with a sheet of brown paper or a pane of glass and then stand the pans or boxes in a warm greenhouse or frame where the temperature ranges from 50° to 60°.

Should the soil subsequently show signs of drying, it must be gently sprinkled with a fine spray from can or syringe, taking care not to disturb the seeds. When germination has been effected, the brown paper or glass must be promptly removed and the pans or boxes placed near the glass, otherwise the seedlings will quickly become drawn and spoiled. As soon as the young plants are large enough to handle, pricking off must be resorted to, and boxes about 4 inches deep are the best for this purpose. Good drainage is essential, and the soil mixture advised for seed-sowing will answer very well, but it may with advantage be used in a rougher state. Three inches apart each way is none too much for the seedlings, and it is imperative that the soil be made firm around the roots of each as the work proceeds, a firm (not hard) rooting medium inducing that sturdy growth which is so desirable.

Keep the young plants in a rather close house or frame until they have taken well to the new soil, when a hardening off process must be commenced, affording more air gradually and keeping the plants as close to the glass as possible. If properly hardened off the plants may be set out in their permanent quarters by the middle of May, soil of a rather poor nature tending to free-flowering and good colors better than that of a very rich character. Old mortar or lime added to the soil will be much appreciated. If the tall and intermediate varieties are planted one foot apart each way and the Tom Thumb sorts nine inches, they will quickly fill up and form a beautiful mass of color in the late summer and autumn months. For bedding purposes these plants are splendid, especially the intermediate and Tom Thumb types, the tall varieties being excellent for mixed borders and also for cutting.

THE BEST ARTICLE OF ITS KIND IN THE WORLD.



It stops leaks, keeps out the wind, is good to bed the glass in, and holds glass tight.
THIS IS ALL PROVED BY YEARS OF TEST.

960 Mill Street, KENDALLVILLE, IND.

The many beautiful colors now obtainable in these plants should insure their being more freely grown.

Maurandia Barclaiana Atro-coerulea.

In this plant the flowers are much larger than in older and well known varieties. The color is of a deep beautiful blue and flowers during the whole season. It is altogether much superior to any other variety known. If sown in March, in frames, and put out in the ground in May it will flower until late in the autumn even in a half shady place.—Revue Horticole.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At Washington.

Capt. Shaffer's team defeated the Carrolls, January 15, at the Rathskellar alleys, scores as follows:

FLORISTS:			
Cooke	157	161	177
Shaffer	175	191	175
Hanmer	170	212	179
Caldwell	168	170	202
McLennon	155	165	151

Flora and Fauna.

Blue roses are a common thing,
And cherries to the same stems cling
With peaches fat.
Strange vegetation you'll agree,
Is the observer apt to see
Upon a hat.

I've seen a squirrel with a beak
Aligned beside a furry freak
Alike a bat.
You'll notice fauna rare and queer
Hobnobbing with the other gear
Upon a hat.

TRADE QUIET.

Business has been quiet, partly owing to the weather, which has been unusually wet ever since New Year's eve, raining almost every day. Flowers which were quite scarce and high priced during the holidays have come down very much, as there are more than enough to go around. Violets and carnations, especially, are quite plentiful; the latter are not of good quality as owing to the continued dark weather, they do not keep well after being cut. The same can be said of roses. Lily of the valley, Roman hyacinths and freesias are also coming in in quantity and can be bought at very low prices. Tulips and Trumpet Major narcissus are still quite scarce, but a few more days of warm weather will soon bring plenty into the market, the earliest outside grown ones coming from Santa Cruz. There are still quite a few chrysanthemums in the market mostly late white varieties, which come in handy for funeral work and in consequence are eagerly bought up.

NOTES.

The Pacific Coast Horticultural Society at its last annual election elected the following officers:

H. Plath, president.
Wm. Kettlewell, vice president.
T. Taylor, recording secretary.
J. Grimshaw, financial secretary.
G. Theuergarten, librarian.
J. W. Bagge, trustee.

H. Plath gave an interesting talk about his recent trip in Europe and what he saw there of interest to the trade. At the next meeting he will give a report on the National Flower Show at Chicago. The society has been initiating quite a few new members lately and is in a flourishing condition.

Two very nice stores have recently been opened on Powell street between Ellis and O'Farrell, one by T. Mosco, late of Chicago, and the other by the Hackel Floral Co. Another store will soon be opened by John R. Sievers & Co. in the same neighborhood, at the corner of Powell and O'Farrell streets. This will be one of the finest stores in the west; the rent is said to be $600 monthly. Being a corner store Mr. Sievers will have much opportunity to display his tasteful and original window decorations. The trade wishes him much success in his new venture.

Wm. Forrest has recently sold out his store at 2583 Mission street to the Twenty-second street florist who is running this store now in connection with his store on Twenty-second street. He has had a new front put in this store, improving it very much in appearance.

J. J. Karins, representing Henry A. Dreer, Philadelphia, Pa., has just arrived in town, reporting very good business in Washington and Oregon.

The Francis Floral Co. in the California Market reports quite a brisk trade, although only in business a few months.

P.

CARTHAGE, MO.—Stephen Hyde, Jr., East Thirteenth street, has begun the erection of four large modern greenhouses 30x600 feet in connection with his present plant. The new additions will be strictly up-to-date in every detail and will be devoted exclusively to the growth of carnations. New boilers are to be installed and when the work is finished Mr. Hyde will have a very complete and up-to-date establishment.

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

DETROIT, MICH.—The American Blower Co., of this city, which manufactures the Detroit steam trap now used in many greenhouse establishments where steam is employed, has consolidated with the Sirocco Engineering Co. of New York. Headquarters will be continued in Detroit.

W. C. POLK, Fort Branch, Ind., has patented an apparatus for building concrete structures providing for means of supporting the forms independently of the concrete, whereby the green concrete will not be strained or broken either by the weight of the forms or their removal; also for releasing and resetting the forms at different elevations saving much time and labor, and to hold them plumb and level after being once set.

THE Association of American Portland Cement Manufacturers has issued a bulletin on "Mixing and Placing Concrete" by Percy H. Wilson and Clifford W. Gaylord that is well worth perusal by anyone having work of this kind in hand or in prospect. Very full yet concise details are given as to preparing concrete and the best materials to use while the illustrations are so clear and apt that they almost tell the story of the processes without the text. We shall have occasion to further refer to this excellent little booklet.

The "A B C" Self Oiling Engine.

This is claimed by florists and market gardeners who have used it to be one of the most dependable, small, high-speed engines extant. It is made in various sizes and styles by the American Blower Co., Detroit, Mich., and its unique features are well described in a catalogue sent out by this firm. The "A B C" engine is remarkable in that it needs oiling only once in three months—once in a year one user claims; the working parts are all enclosed making it very safe as well as dust proof, and it may be coupled direct, without belting, to centrifugal pumps, electric generators or any class of machine for which a high speed and regularity of running is essential. Being enclosed they can be run in very dirty or dusty places, such as boiler rooms, without injury, and for this reason are very handy for driving mechanical stokers, chain grates, ash or coal conveyers or hoists of any description. There are no oil cups or splash lubricators yet it is guaranteed by the makers to run perfectly for three months without refilling the oil reservoir while many customers claim that for periods of from six to nine months they have never even removed the side panels for adjustment. The economy of such an engine must be apparent even to those of little mechanical skill or knowledge.

Greenhouse Building.

Kansas City, Mo.—Wm. L. Rock Flower Co., seven houses 27x260 feet for roses.

Topeka, Kans.—C. E. Hubbard, one greenhouse at 316 Polk street.

Cromwell, Conn.—A. N. Pierson, one house for grafted roses.

"DETROIT" RETURN TRAPS

"Detroit" Return Trap. (Patented)

Will keep any Steam heating system free from water, making every foot hot and efficient, returning automatically all water of condensation directly into the boiler—hot—and without a pump.

The Greatest Fuel Saver ever Offered any Florist.

Write size of boiler and number of square feet of glass.
IT WILL PAY YOU.

AMERICAN BLOWER COMPANY,
Dept A. F. DETROIT, MICH.

Use our patent Iron Bench Fittings and Roof Supports.

American Heater Fdy. Co.

West Chicago, Illinois.

Louisville.

BUSINESS GOOD.

Business conditions the past week were the best experienced for some time. Roses had a very good demand and a good many more could have been used. The quality was fair. Carnations had a very good demand and were of fair quality. Quite a number of those shipped in arrived in a condition rendering them unfit for use, naturally causing quite a number of disappointments. It would pay the growers who pack their flowers so tight to use a little ice. They would then receive good reports and would not be thinking they are shipping to a poor market. Violets and lily of the valley sell well and bring fair prices. There will soon be plenty of bulbous stock. At present it is selling well and bringing fair prices, the quality being satisfactory. Green goods are in fair supply and sell rapidly.

NOTES.

The regular monthly meeting of the Kentucky Society of Florists will be held February 2 at Fred L. Schulz's store, 206 Sixth street, at 8 p. m. A rose and carnation exhibition will be held in conjunction with this meeting. Anyone having any novelties of any kind will favor us by sending a sample. Secretary Kleinstarink reported that the outlook for a good exhibition is bright, and it is hoped the members who want some benefit out of the society will attend, and pass their opinions on such exhibitions. It will harm no one and do everyone some good.

Louis Kirch is cutting some of the best carnations around here. His plants are in very good condition despite the fact that he is out late Monday nights trying to bowl 300.

Nanz & Neuner have been exhibiting a large quantity of good carnations in their window.

Jacob Schulz had a pretty table decoration in his window last week.

Henry Fuchs has a nice lot of bulbous stock. F. L. S.

WASHINGTON, D. C.—Martin Griffin, for nearly 50 years florist at the treasury department, died January 9. Mr. Griffin was born in Ireland, and was one of the oldest residents, having resided in this city for 55 years. For many years his work on the treasury grounds had been the subject of praise, not only from citizens but visitors and sighteers as well. About two years ago the wife of Mr. Griffin was burned to death. The aged man, in an attempt to rescue her from the flames, was badly burned. Despite the injury, Mr. Griffin had taken such a keen interest in his work that he continued as florist as long as his strength permitted him. A year ago, however, he was forced to retire because of the injuries.

Prepare for Cold Weather

HEATING PLANTS AND SUPPLIES
at Wrecking Prices

If you intend to increase the size and capacity of your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order. We have just purchased at forced sale

100,000,000 ft. of Brand New Lumber and Timbers,

which we offer at prices lower than your local dealer can supply the same grade.

ESTIMATES FURNISHED FREE. Our Greenhouse Engineer will furnish you with an estimate on anything you may require in the Boiler, Heating Material or Building line.

GREENHOUSE BOILERS A complete line of Locomotive Fire-box Boilers, Kroeschell Greenhouse Boilers, Return Tubular Boilers, Cast Iron Sectional Boilers etc. Some are rebuilt, some brand new, but all are in first-class condition for further service.

BOILER FLUES Fitted with special threads and couplings. Can be used same as threaded pipe and fitted with calked joint greenhouse fittings at the end of run. These flues have the same strength as wrought iron pipe and are offered at about half the price. Any size desired.

BOILER TUBES 20 carloads of 4-in. Boiler Tubes in perfect condition. They are just the thing for heating purposes or for retubing boilers. Other sizes can be furnished at specially low prices. Write for complete list.

IRON PIPE 100,000 ft. of Standard Pipe, in good condition. We cut and thread to order. Any length or size you want. Ask for Pipe List and save money.

HARDWARE Building and light hardware of all kinds, Wire and Wire Fencing, Bolts, Hatchets, Hammers, Axes, etc. Everything needed in the greenhouse supply line at bargain prices.

Ask for Our Latest 500-page Catalog No. 47. It is the greatest book of bargains ever issued. You save 30 to 50 per cent by dealing with us. Our Furniture Catalog No. F47 is now ready for distribution. Write for it to-day.

Chicago House Wrecking Co. 35th and Iron Sts, CHICAGO.

NEWARK, O.—Kent Bros. opened a new store at 20 West Church street January 16, with Miss Lorena Kent in charge.

Ornamental and Honey Comb Rock

For Water Fountains, Flower Rockeries and Fish Ponds, sold at reasonable prices. Prompt attention paid to all orders.

JOE H. HARDIN, Venice, Ohio

Louisiana Red Cypress

As described by Bassett & Washburn, Chicago.

"Replying to your favor requesting our experience with Pecky Cypress, we will say we have been using this grade of Cypress in our greenhouses and plant benches for the last ten or twelve years and so far have not found any of this wood that has all rotted out. We formerly used Hemlock and Pine, but found that two-inch stock only lasted about four years, while so far we have had no Pecky Cypress rot out in ten or twelve years. We use clear Cypress for all our roof work, ventilators, etc., and it is very satisfactory. We think it is the only kind of lumber for the purpose."

IT IS THE MOST DURABLE WOOD KNOWN. Ask about it at your local lumber yard or write

LOUISIANA RED CYPRESS CO. HIBERNIA BUILDING, **New Orleans, La.**

Desplaines, Ill.

Frank Garland, with 65,000 square feet of glass, grows a general line, including roses, carnations, sweet peas and bulbous flowers. The chief pride of the proprietor here is the sectional cement bench of his own construction which he is gradually putting in all his houses. Frank Garland is a heavy grower of bulbous stock, the late Edgar Sanders having dubbed this place "Little Holland" on one occasion after seeing the extensive line grown. There are 60,000 tulips, including Coleur Cardinal, Keizerskroon, La Reine and Yellow Prince, 15,000 daffodils and 40,000 Paper White narcissus. Lilies are also grown, including 2,000 giganteum, 2,000 longiflorum and 1,000 Formosum. In the rose section Rhea Reid cuttings are already in sand and My Maryland will be soon added.

H. C. Blewitt has devoted his entire place, 15,000 square feet, to sweet peas, with which he is having excellent success. For early varieties he has Christmas Pink, Mrs. Wallace, Navy Blue and Earliest of All. For midseason, King Edward VII, Emily Henderson and Countess of Radnor are grown. Emily Henderson is a very good summer white as it stands the heat well. For late there are Blanche Ferry and several of the Spencer varieties. Attention, says Mr. Blewitt, is the entire secret of success in sweet pea culture. The thermometer should not go above 50° at night, though 65° during the day is permissible. Mr. Blewitt has the distinction of having cut the first carnations grown in this greenhouse center, this having occurred while he was foreman for Garland Bros. in 1889.

The range of the Desplaines Floral Co., Harry Blewitt and John Prickett, proprietors, with 32,000 square feet of glass, is in excellent cultural condition. Besides the standard carnations this firm is growing Defiance and Winona. Several seedling carnations, originating here, give good promise of success, notably a cross between Rose Pink Enchantress and White Perfection. They are fine, large flowers, with well-filled centers, and no splits as yet. The color is a little lighter than that of Rose Pink Enchantress.

Sol. Garland has his 45,000 square feet of glass in the pink of condition. The standard carnations are grown and the best of the new varieties are tried out. Mrs. Patten is considered an especially good bloomer from January 1 to July 1 and is producing fine flowers now. O. P. Bassett, Lucille, Winona and Afterglow are among the new varieties to be benched this season. Two 30x200-foot houses are to be built this spring, replacing two which still have the sash of houses erected by the late Sol. Garland, Sr., at Winnetka, 45 years ago. These sash, it is interesting to note, were made by the late Frank Moninger, father of the late John C. Moninger of the John C. Moninger Co., Chicago.

W. S. Garland, with 50,000 square feet of glass, confines his attention largely to carnations. Enchantress and Mrs. Patten have been particularly fine this season, the latter being much admired for its stiff stem and excellent form. In the fall some 20,000 chrysanthemums are grown, followed by sweet peas in the same benches.

Chas. Wiffin has about 20,000 square feet of glass; grows carnations, sweet peas, pansies, stocks and Asparagus Sprengeri. The carnations, which were backward on account of late planting, are now thrifty plants in excellent crop. The pansies are just starting up and stocks for the first time are a considerable feature.

Chas. Arnold, successor to Peters & Arnold, with about 15,000 square feet of glass, has planted his houses to sweet peas, feverfew, stocks, Paper White narcissus, candy tuft and carnations.

PORTLAND, ORE.—The greenhouse of Milton W. Smith, at 826 Hood street, was destroyed by fire with a loss of $100 January 10.

LUMBER

Old Year Leaves.

Tossed by the storms of Autumn, chill and drear,
The leaves fall auburn-tinted, and the trees
Stand reft and bare, yet on the silent leas
The leaves lie drifted still—while cold, austere,
Stern Winter waits—while early snowdrops cheer
The woodland shadows—while the happy bees
Are wakened by the balmy western breeze,
And birds and boughs proclaim that spring is near.

So lost hopes severed by the stress of life
Lie all unburied yet before our eyes
Though none but we regard their mute decay;
And ever amid this stir and moil and strife
Fresh aims and growing purposes arise
Above the faded hopes of yesterday.
—Daily Mirror.

American Carnation Society.

Indianapolis Convention Report Continued from Issue of January 30.

What the Experiment Stations Are Doing for the Carnation Grower.

BY H. B. DORNER.

During the past 15 years the continually increasing demand for carnations has necessarily led to an increase in the greenhouse space devoted to the cultivation of this plant. With this increase many new and perplexing problems have been forced upon us. There is hardly a plant that has more diseases and insect pests affecting it. In those states where many carnations are grown the experiment stations have attempted, from time to time, to solve some of these problems. The results of these studies have been published in bulletins and reports of the stations.

EXPERIMENTS ON COMMERCIAL SCALE.

Most of the work in the past has been done on a small scale with just a few plants, and the results, to a certain degree, are rather indefinite. Today it is realized, that to have results comparable with commercial work, one must carry on these experiments on a commercial scale. Many of the stations are now building or have built greenhouses which are devoted entirely to special floricultural crops.

In looking over the work done by the various stations one finds that the problems of 10 or 15 years ago are not altogether the problems of today. Some of the earliest work on the carnation was on rust and its prevention and destruction. At that time the carnations were not rust-resistant and were easily affected. Since those days the varieties sent out each year have been more resistant each year until today the rust is not the enemy that it formerly was. No chemical has been found as yet that will eradicate it and its disappearance is due to a change in the constitution of the host. Its worst days are over. Stem rot has been discussed time and time again but no effective method has been devised for its destruction. Its disappearance will also follow on the breeding of resistant varieties.

LIVE QUESTIONS.

The questions of today then seem to be along the line of carnation breeding, methods for the prevention and destruction of insect enemies and problems of nutrition or, in other words, the proper use of fertilizers. In order to secure the necessary data for this paper, the writer sent a letter to the director of each agricultural experiment station in the United States, requesting such information as could be given regarding results that have been published and also the work which is being carried on at the present time. No attempt will be made to discuss the work of the stations in detail, but to give a brief resumé of what has been done and what they are doing at present.

The requirements of the carnation naturally prohibit its being grown in certain parts of the country and many stations carry on no work along this line. This includes most of the states south of the Mason and Dixon line and also many of the western states. Replies have been received to most of these but the report is naturally incomplete as some have failed to answer. In addition to this information data was secured from an examination of the literature published.

MOST WORK IN CARNATION CENTERS.

It will be found that most work has been done by the stations of those states which may be called carnation centers. The troubles of the carnation growers were important enough to occupy a part of their time. Among the stations from which replies have been received are a number where no work has been done. This is not due to a lack of interest but because very few, if any, carnations are grown in the state and so time and funds have been expended on other crops. Among these are the following southern and western states: New Mexico, California, Louisiana, West Virginia, Alabama, Utah, Montana, Wyoming, Kentucky.—Maine, Minnesota and North Dakota also have done nothing along this line.

WORK IN VARIOUS STATES.

Florida has attempted to grow carnations but found that northern varieties all failed in the south. The variety Augusta was sent out from there as the

only variety suitable for the state. South Carolina grows a few carnations but has carried on no experiments as there are few floral establishments in the state. In North Carolina the work has been recent and some time has been devoted to root-knot of carnations. Virginia has done nothing but expects to take up work in floriculture in the near future.

Pennsylvania has also done nothing but expects to take up some carnation work as soon as new houses are finished. Ohio has done a little on sub-irrigation and crossing but has published nothing. Michigan has done nothing, due to lack of equipment. Wisconsin has no facilities at present but floricultural work will begin as soon as new houses are completed. Iowa grows a few plants for class work but has given them no attention as a crop. Kansas has done some work on control of rust but has published nothing. Missouri has confined her work entirely to practical methods of preventing rust and suggests use of dry Bordeaux mixture. In Oregon a little work has been done but no data published. In Washington only a few carnations are grown for class work. Commercially few carnations are planted, time and space being devoted to roses.

EQUIPMENT AND FUNDS WANTED.

Thus far the report shows that there are some stations in carnation growing sections at which floricultural work would be carried on if they had the proper equipment and funds. Several of these have greenhouses under construction and will take up this line of work in the near future. There are, however, a number of stations at which much work has been done with the carnation and where still more is being done.

In Massachusetts some work has been done at both stations. At the Hatch station two bulletins have been published: No. 10 deals with fertilizers for carnations and No. 80 gives directions for spraying. The seventeenth report gives some notes on soil sterilization and the fourteenth some notes on stem rot. In the reports of the state station are found notes on stem rot and analyses of carnations.

In Bulletin 128 the Rhode Island station gives the results of soil treatment in culture of carnations. At present a 50-foot house is devoted to experiments on the effect of various kinds of physical and chemical soil treatment upon carnation growth. This is now only in its second season and nothing has been published as yet.

Connecticut has issued various notes on results of experiments with carnation

H. B. Dorner, Urbana, Ill.

diseases, effect of lime on development and the use of commercial fertilizers. These have been published in the station reports of 1896, 1897, 1899, 1900 and 1906.

WORK IN NEW YORK.

At the Cornell station the carnation has been used in various experiments as to crossing, influence of electric and acetylene light, influence of fertilizers on vegetative parts and on vigor, quantity and viability of pollen. Records have been made of work but not printed as yet.

At the state station at Geneva some very comprehensive work has been done. The latest bulletin published (Technical Bulletin No 7) contains the results of a very careful study of the bud rot, its causes and control. In addition to this publication the following bulletins have also been issued: No. 100 on methods of "Combating Carnation Rust"; No. 138 "Effects of Common Salt on the Growth of Carnations and Carnation Rust"; No. 164 on "Leaf Spot"; No. 175 "A Parasite upon Carnation Rust"; No. 186 contains notes on stem rot.

WORK IN NEW HAMPSHIRE.

At the New Hampshire station the following problems are now under consideration; the state has devoted to this work at present time 2,500 square feet of glass:

1. A test of the value of farm manures judiciously used in the compost heap, as a means of improving the growth of plants, size and other points of excellence in the flower.
2. A test of the value of commercial fertilizers applied as a top dressing to carnation benches.
3. How to account for the earliness and free flowering of carnations, the theory being worked out in seedlings.
4. Pot culture of carnations during summer months in cold frames compared to field culture.
5. House culture of carnations compared to outside culture.
6. Suitable soil for winter culture of carnations.
7. Inheritance of color in carnations.

WORK IN VERMONT.

In Vermont, Wm. Stuart has done some interesting work in crossing carnations, the results of which appear in the twentieth annual report of the station. The work consists of a study of seasonal influence in crossing relative to seed production in which Mr. Stuart arrives at the conclusion that early crosses are most successful giving a higher percentage of successes, a larger number of seeds and a higher percentage of germination. Some attention has also been given to Mendelian inheritance in the carnation with respect to the unit characters of single and double. He finds that the law holds good in the case of the carnation.

In New Jersey investigations have recently been taken up. At the present time a study is being made of the physical condition of the red shale soil

PARTIAL VIEW OF THE EXHIBITS AT THE CARNATION SOCIETY'S EXHIBITION AT INDIANAPOLIS, JANUARY 27-28.

GROUP OF VISITORS AT THE INDIANAPOLIS CONVENTION, JANUARY 27-28.

using various proportions of sand and organic matter. Some interesting notes as to the productivity, color and size of prosperity in these tests are given in the AMERICAN FLORIST, p. 1244, issue of January 16.

In Bulletin 127 the Maryland station has some very interesting notes on the effects of fertilizer on stiffness of stem, effect of varying amounts of nitrogen, the earliness, different time of setting carnations, continuous cropping without changing soil and bursting of carnations due to location on bench. (Also noted in the AMERICAN FLORIST.—ED.) At the present time investigations are being carried on to determine effect of cutting selection on vigor of plant and development of color types from seed. A house 20x50 feet is being devoted to this work.

In Indiana the results of the most important work were given in bulletin 59 on "Bacteriosis of Carnations." This disease was considered to be due to bacteria but is now known to be caused by punctures of insects and is called stigmonose. A number of articles also appeared in trade journals at various times. No work is now being done due to lack of greenhouses.

WORK IN ILLINOIS.

At Illinois the past year was devoted to the repression of thrips on carnations and during the season from October, 1907, to June 15, 1908, over 68,000 buds were examined. Most of the work was done with tobacco compounds. The full results of the work have not been published yet.

During the present year two houses 25x105 feet are being devoted to an experiment with carnations testing the value of chemical fertilizers as supplementing stable manures. This experiment comprises 30 combinations of fertilizers which are repeated with four different varieties in order to check results—3,200 plants are used in the experiment. The fertilizers used are dried blood, sodium nitrate, ammonium sulphate for nitrogen, acid phosphate, ground rock and bone meal for phosphorous, potassium sulphate, wood ashes and kainit for potassium and lime. Several years will be required to complete the work.

The only work done by Nebraska is on the bud rot of the carnation and its accompanying mite. The results of this work were published as bulletin No. 103. Ten stations have not been heard from, and as most of them are in regions unfavorable to carnation growing, have probably done no work along this line. A study of the report will show that the real work in floriculture at the stations is in its infancy and that the work along the line of carnations is just beginning. The time is not far distant when each station will be devoting a certain amount of time to it.

W. W. Coles on the Convention.

The eighteenth annual meeting of the American Carnation Society has come and gone, and was, no doubt, the most successful of any to date. The stock, both standard and new varieties, was of a higher grade than heretofore and kept remarkably well during the two days of the exhibition. In fact, some of the vases were even better the last day than when staged. A great number of new seedlings were shown and many looked quite promising to the average carnation grower. I made notes of a few of the many good looking seedlings as they ap-

peared on the show table, and no doubt have missed quite a number that may be future standard sorts, although it is difficult to judge the merits of any variety unless it is seen growing.

One of the most attractive looking new comers was a beautiful bright dark pink shown by Nic Zweifel of Milwaukee, Wis., and Dorner's two new reds had the appearance of striking a new high mark for red varieties. Shasta by Baur & Smith was commented on very favorably by the growers in general, also a promising good looking white, No. 404, from Dailledouze Bros. These two whites seemed to be talked of as prospective good ones. Dorothy Gordon by Joseph Heacock at first sight would be taken for well grown Rose Pink Enchantress. Bertermann Bros. Co. had the field to themselves in the yellow class. Their new seedling, named James Whitcomb Riley, is a recent departure for this class. I was so impressed with this grand sort that I took the car to Cumberland to see it growing, and was much pleased with its growth, good stem and free blooming qualities. It was the most distinct carnation shown. In the maroon class, F. R. Pierson's No. 60 looked quite promising. Admiration is a pleasing pink which Chas. Knopf considers his best production. President Taft was too weak to stand up and was a disappointment. The most popular varieties exhibited were White Enchantress, Light Pink Enchantress and Rose Pink Enchantress, in the white and pink varieties. In the red classes Beacon and Victory were most prominent and O. P. Bassett, as usual, showed up in good form. The new variegated variety, Bay State, on the Patten order, won the gold medal. Mrs. J. O. Vaughan was shown by W. N. Rudd in good form. The vases of White Killarney rose shown by F. R. Pierson Co. and the Waban Rose Conservatories were truly magnificent. We shall all want to grow this peerless variety next year. I do not believe there was a single grower who was not well repaid for the visit to this grand exhibition.

Carnations I Have Known and Their Elevating Influence.

BY MISS SARAH A. HILL.

Mr. Toastmaster and Dear Friends:

I have taken my pen in hand to write you a few lines because I can express what I have in mind much better than in attempting an after-dinner speech, for unlike the majority of my sex, I happen not to be eloquent of tongue. I recognize many faces present as those of old and tried friends, but if I could for a moment see your signatures I should know many more of you intimately, for the written name at once brings up a picture of your letters, and I can say without boasting that few women, the country over, have as many delightful gentlemen correspondents as "Yours Truly."

EARLY VARIETIES.

Now that the machine has taken the place of the steel pen I am seldom at a loss to arrive at the meaning of my correspondents, but there have been times in the past when I hardly knew whether I was deciphering an ardent declaration of admiration, or only a very warm cancellation of an order for a belated lot of the reigning novelty in carnations. It is never safe for an unmarried woman to let her memory reach too far back into the past, but I can remember when old La Purite was our mainstay; I remember when Mlle. Carle threw up its first snow white flower and we held our breath over its purity of color and its clear cut form, but even the most daring catalogue liar could not claim freedom of bloom for either of these beautiful old pathfinders, nor for Buttercup or Chester Pride, Portia or Grace Wilder, which were added as the years went by, and if there had been only carnations on our benches I doubt if we should have had butter on our bread, for the bread-and-butter carnation had as yet no existence.

THE TIDE TURNING.

In 1888 with Tidal Wave the tide began to turn, and Father Dorner soon after gave us a delightful set of seedlings and these, with Lizzie McGowan and Daybreak, set an entirely new pace, and a carnation, from being a spoiled beauty for admiration only, began to be questioned as to its right to occupy space and as to its returns in hard dollars and cents per square foot; the heavy boot of sordid commercialism had kicked aside the old-time beauties, and the husky varieties with sleeves rolled up, stems like steel, calyces like gutta percha, petals like leather, and a noise like money, came rustling on the stage and many a song and dance they have given us.

Visitors who go about a greenhouse with the proprietor seldom fail to remark upon the elevating influence of flowers; I have never known a florist yet who failed to acquiesce; he will stretch his neck in his collar, elevate his shoulders, and really feel higher up both mentally and morally as the suggestion is once more made to him. But I have seen the most enthusiastic visitor put to flight from the most magnificent carnation range by a very depressed looking section hand who might be scattering bone meal or other dainty tidbit for Lady Carnation's mid-week meal. And further, I have known carnations that have dragged their owners down very near to the bottomless pit, and even the best of varieties at times have tried the souls of their grower till no modern tongue contained sufficiently lurid language to express his feelings.

THE VARIETY JUBILEE.

I once made the acquaintance of a glorious red carnation, sweet as winds from Araby, a stem like whalebone, 8 and 10 blooms to the plant, a blaze of color, and every florist wanted it by the 500 or 1,000, but the rust "swept down like the wolf on the fold" and devoured every green leaf, and I still have the vision of our good German grower with wildly waving arms over his grassless benches exclaiming "That Jubilly, he was the very teufel," and what else he may have said when no ladies were present I never dared inquire. A prominent firm in Massachusetts who had a nice order for "Jubilly" placed with us, was extremely curious to know why they were failing to receive their cuttings, and made inquiry quite forcibly weekly, and faintly each week we replied. I am glad that I am addressing a company of florists every one of whom has disseminated or has been upon the point of disseminating a new carnation, for you know exactly what I am talking about, and how often you went into a perspiration before the season closed, and neither did you need a rose temperature to make your pores open.

Well, some four years after Jubilee this same prominent Massachusetts firm sent out a seedling, Mrs. Thomas R. L., I believe. We gave it a good write up in our catalogue—"Size enormous, stems stiff, free in growth, profuse in bloom, of healthy constitution, never bursts its calyx, everything has been claimed for it and our opinion is that it will justify the claim"; and it did very nearly, but I believe it was late in May before our orders were filled and so despicable is feminine human nature that I confess to pure enjoyment in going to our file and copying verbatim several letters addressed to us four years previously only substituting the name Mrs. Thomas R. Lawson for Jubilee asking why we were not receiving those cuttings promised us with such absolute certainty for early delivery in the January past, and I think that the secretary of the disseminating company must have duplicated our replies of even date, for I recognized the same tone of chastened humility that had characterized our own.

I never felt my sympathies more deeply stirred than in the case of a certain

CARNATION ADONIS AS GROWN BY W. C. SMITH, PHILADELPHIA, PA., IN 1904.

See Miss Hill's Address Before the Indianapolis Convention of the American Carnation Society, January 28, 1909.

BANQUET GIVEN THE CARNATION CONVENTION VISITORS AT THE COLUMBIA CLUB, JANUARY 28.

magnificent pink variety grown not a thousand miles away from this city which seemed to have every necessary qualification for success, but it later developed that the cuttings would not root. Now a perfect carnation, like the great American mortgage lifter, must "Root, hog, or die." We waited and waited for those cuttings; so did the rest of you; each time we were told that the last batch had failed to root. One grower was sure the plants were grown too warm; another that it was too much bottom heat in the propagating house; a third that they needed a Bordeaux spray. A happy thought struck our firm; we would ask for unrooted cuttings, would take them over to Richmond, under our perfect conditions we would root them in three weeks and complete our orders. Our disseminating friend was very accommodating and sent us baskets of the loveliest tips imaginable, but with every appliance known to modern carnation culture, we failed to root over 10 per cent. It would not have been safe for you to talk to the owner of Mrs. Nelson that year on the elevating influence of flowers. Nothing short of diabolism itself could have been more tantalizing than the antics of that magnificent beauty.

EASTERN AND WESTERN BEAUTIES.

Our firm has at different times tested for their owners a number of aspirants for favor with varying success; its a risky thing to do; if they fail to make good, the owner will always have a doubt in his mind as to whether all the conditions were just right to bring out their good points; the gentleman, who does the testing, and his grower, will have arguments about wasted space and the nice discrimination needed in endorsing a novelty. Less than a decade ago, your toastmaster went down into the east to take a last look at a fine white seedling which we were to test, and if satisfactory to help disseminate; it showed up so fine down in its eastern home that he could hardly wait to get the stock planted on his own place. In the meantime, our Fred H. Lemon had gone up into the northwest on a similar errand with regard to a gorgeous pink; on his return he gave the usual wheatfield description, buds and blooms knocking their heads together—and such heads—on such stems! "E. G. H." wanted a south bench to test his white beauty and "F. H. L." insisted on a southern exposure for his glorified pink; they each had a 200-foot bench facing south in the best 400-foot house. When the date of the annual meeting of this society came around, where the white beauty and the glorified pink were to take your breath away, "E. G. H.'s" south bench was covered with a dense growth of pale green carnation grass which would have required a scythe to cut it and not a flower in sight, while "F. H. L.'s" south bench looked like a patch of seedling onions in very early spring, with an occasional petal of pink thrown in for cheer. The two gentlemen never went together to inspect the two benches; the senior member might be seen gazing with a pained expression at Lemon's choice, but carefully avoiding a glance at his own eastern beauty; an hour later, "Brer." Lemon could be found, arms folded, an unholy smile upon his face, gazing at 200 feet of Hill's hopes, but without a glance at the onion patch, and to this day their only comment has been, "check!" but the check never went through the treasurer's hands.

THE ILL-FATED ADONIS.

Then there was Adonis, and here words fail me for the present, but, some day when Richard W. and Robert C. and the secretary of The E. G. H. Co. have all reached the age limit, and have leisure to take up literature, we are going to collaborate a biography and romance of the young Adonis, the most ravishing scarlet carnation ever shown to human gaze; behold a bench of it in full bloom, heads erect, a color far beyond words to describe. You can see the ecstasy in the faces of Messrs. Craig, Hill and Witterstaetter as they devoured its dazzling beauty. This is not yet a matter of ancient history and still it was before the days when the florist had grown sadly wise and had learned to balance a carnation stem on his index finger as the juggler does his pole to test its stiffness; before he had learned to draw the flower slowly through his closed hand and watch the petals spring back to the horizontal, before he had learned to slap the bloom upon the table and watch the resisting power of the texture; Adonis helped to teach the trade this last trick and so was not wholly lost in the economy of carnation culture.

Since Adonis there have been others; they are current history and still in mind. Father Dorner and Peter Fisher have been the means of giving us the most popular carnations and the best wage earners in the family; we can gaze long and fondly upon White Perfection and Enchantress as a father does upon a good child and say, "They have never given me an anxious moment." Oh! but

the waste of it all, the squandering of hard earned dollars you may say; but progress always costs in any line of trade or life and the expenditure of money is the smallest item; the thing that really counts is endeavor and patient perseverance, and absolute honesty, and this is as true in commerce as in manufacturing or in carnation culture, and flowers do have an elevating influence on their growers, if the soil is mixed with good will for one's fellows and faith in a kindly Providence that sends the needed rain and sunshine and finally gives the increase.

Final Resolutions.

The following resolutions were adopted at the close of the banquet by the committee on final resolutions:

Whereas, The American Carnation Society has been for the past two days the guest of the florists and members of allied professions of Indianapolis and vicinity, and

Whereas, The exhibition hall and facilities for staging displays have been the most convenient and best adapted ever placed at our disposal, and

Whereas, The kindness, courtesy and ever ready assistance extended by our fellow members of Indianapolis have deeply impressed us, therefore

Be it resolved, That we tender to the city officials of Indianapolis our sincere thanks for the hospitable welcome extended to our society.

That we record with deep appreciation our gratitude to the State Florists' Association of Indiana and the members of our profession who have been allied with them in perfecting the admirable arrangements which have contributed so greatly to the success of this meeting. And that our thanks are further due to the press of the city for the accurate reports they have made of our meetings, and to the horticultural press especially, for the interest they have taken in advancing the welfare of our society.

F. R. PIERSON,
PETER FISHER,
WM. WEBER,
Committee on Final Resolutions.

The Banquet.

At the elaborate banquet given by the State Florists' Association at the Columbia club in honor of the members of the American Carnation Society, January 28, Dr. J. A. E. Haugh introduced E. G. Hill as toastmaster, who after a few introductory remarks called upon Mayor Bookwalter, who responded to the toast "Indiana, a Good Place to Stay." "My own acts prove," said the mayor, "what I think of Indiana and Indianapolis as a place in which to remain. The stork left me here in Indiana and although I wandered away, I came back. Now a wife and assets in the way of a family, all of whom stay in Indiana, testify to our regard for the state." The mayor paid a tribute to the business of growing flowers. He said that a man's environment and occupation leave a stamp upon his face and his character. "A man whose work," he continued, "keeps him surrounded by beautiful flowers is bound to influence him. We who buy the products of your labors may think we are paying Broadway prices for Indiana flowers, but I believe we get full value for our money. While the prices may rise consistently, the standard is rising with the price. The people of Indiana and Indianapolis are glad to have had you growers here. We hope you will not wait many years before you return, for Indianapolis and Indiana are both good places to stay."

Cheese
Demi Tasse

Dr. Haugh proposed the toast of "Our Guests" in fitting terms with response by J. F. Ammann, Edwardsville, Ill. A vocal solo by Miss Maud Langstaff followed and Miss Sarah Hill was then called upon to speak of "Some Carnations I Have Met." This address proved the gem of the evening and was heartily applauded.

W. N. Rudd spoke of the exhibitions and in connection therewith told the story of an inspection party visiting a penitentiary and remarking upon the cleanliness of everything about the place and the total absence of flowers on the grounds around the building. "Yes," the warden replied, "We have always wanted flowers here, but, don't you know, there has not been a florist sent to the penitentiary since I have been here."

J. C. Vaughan was next called upon and referred to the loss sustained by the society in the loss of the late L. E. Marquisee.

J. A. Valentine spoke for the parent society and other speakers included President Patten, who distributed the special prizes, Mrs. Vesey, representing the ladies, A. T. Hey, and Aug. Poehlmann, the last named reminding the audience of the Buffalo convention and exhibition of the American Rose Society, opening March 17.

At the close of the addresses, H. M. Altick, of Dayton, O., read a poem on the "Flower Divine," by the late L. E. Marquisee written shortly before his death.

A quartette and orchestra contributed to the pleasure of the evening by the rendition of frequent selections.

Echoes.

Our three friends from St. Louis, Otto Koenig, Fred Meinhardt and Theo. Miller, seemed to enjoy every minute of their visit, and regretted when the time came for them to return to the state where they have to be shown.

It will be expensive business for Leonard Kill and Ed. Hauswirth to be reinstated in the Sucking Pig Club. Moral: Members should attend the meetings and continue in good standing.

Albert M. Herr has given the society many long years of useful service as secretary. The members were highly pleased to elect him president for the ensuing year.

The German house proved an ideal place for the exhibition. The air seemed to be just right, as nearly all exhibits kept in fine shape to the end.

Let us all make up our minds right now to attend the next convention at Pittsburg. We cannot afford to miss it.

Judge Vesey, of Fort Wayne, Ind., is a prince of good fellows; he does not believe in doing things by halves.

We were all very glad to see our old time friend, Fred Dorner, Sr., taking such an interest in the exhibits.

The exhibit of miscellaneous plants by Henry Reiman was one of the greatest attractions of the show.

Mrs. Vesey and Miss Sarah Hill made two of the best speeches at the banquet.

CARNATION

HOUSE OF CARNATION RUBY.

Fred Dorner, Jr., was de-light-ed with the showing made by his two new red carnations.

The most talked-of variety on exhibition was James Whitcomb Riley.

What would the carnation convention be without W. N. Rudd?

W. W. COLES.

Convention Notes.

Starting at 6:30 a. m. an interurban car carried 54 convention visitors to Richmond. The early start and long journey surely proved their enthusiasm, for there was a blizzard at the time, and it is 68 miles from Indianapolis to Richmond by the interurban.

Many of those in attendance visited the greenhouses of Bertermann Bros., at Cumberland, to see the new J. Whitcomb Riley carnation growing.

Dorner's, at Lafayette, and the various Richmond and New Castle establishments, proved irresistible to many of the visitors.

Miss Sarah A. Hill's address, printed elsewhere in this issue, was the gem of the convention.

There were about 150 at the banquet, including 25 ladies.

Additional Visitors.

In addition to the long list of visitors given in our issue of January 30, the following were in attendance:

M. A. Barcick, Seymour, Ind.
W. A. Clarke, Pittsburg, Pa.
F. Brinker, Pittsburg, Pa.
Mrs. E. Dailledouze, Brooklyn, N. Y.
H. B. Dorner, Urbana, Ill.
Eugene Ender, Chicago.
Chas. L. Frank, Portland, Ind.
Elizabeth Frank, Portland, Ind.
Harry C. Frank, Portland, Ind.
H. M. Frank, Dayton, O.
Jos. F. Frank, Champaign, Ill.
Sol Garland, Des Plaines, Ill.
G. R. Gause, Richmond, Ind.
R. B. Hayes, Shelby, O.
Fred Heinl, Terre Haute, Ind.
Jos. G. Heinl, Terre, Haute, Ind.
Miss F. W. Herleman, Marion, Ind.
D. R. Herr, Lancaster, Pa.
Miss Sarah Hill, Richmond, Ind.
L. E. Hitz, Marion, Ind.
Simon Humfeld, Muncie, Ind.
E. M. Hyatt, Anderson, Ind.
J. Jones, Richmond, Ind.
Allen Kimmel, Portland, Ind.
T. L. Knipe, Kokomo, Ind.
O. G. Koenig, St. Louis, Mo.
E. N. Kroninger, Allentown, Pa.
Leroy L. Lamborn, Alliance, O.
De Forest W. Ludwig, Pittsburg, Pa.
Earl Mann, Richmond, Ind.
F. C. Mann, Dayton, O.
Wm. Meine, Richmond, Ind.
Theo. Miller, St. Louis, Mo.
G. Mueller, Milwaukee, Wis.
Henry Newby, Logansport, Ind.
P. J. Olinger, Cincinnati, O.
Mrs. Olinger, Cincinnati, O.
Harvey Parker, Richmond, Ind.
Geo. Pastor, Huntington, Ind.
H. H. Ritter, Dayton, O.
A. G. Robinson, Louisville, Ky.
Ben Schweder, Richmond, Ind.
W. E. Slack, Marion, Ind.
J. S. Stuart, Anderson, Ind.
W. M. Tiplady, Lexington, Ky.
Jos. A. Wiebens, Chicago.

MASON CITY, IA.—Edward Curtis of the Curtis Floral Co. of Hampton, has located in this city and will run a large flower store here, under the name of the Mason City Floral Co.

ORANGE, N. J.—The president's reception and annual smoker of the New Jersey Floricultural Society will take place on Friday, February 12, at 8 o'clock at their rooms in the Lindsley building. Prominent speakers on horticultural themes, entertainment and the usual floral display will be features of the evening. —J. B. D.

Favorite Flowers of Famous People.

KAISER ADMIRES THE EDELWEISS.

The emperor of Germany has for his favorite flower the edelweiss, an inhabitant of snow-clad peaks. For the flower perhaps his preference was unfortunate. Since the day when he first appeared on an occasion of state with a blossom of edelweiss in his buttonhole the plant has been practically exterminated throughout its native habitat. At once it became the fashion, and was so generally worn by men, women and children that nature's supply could not equal the demand. For a long time now in Germany it has been artificially grown as an important article of commerce.

EDWARD VII BOOMS THE GARDENIA.

Edward VII. is somewhat fickle in his love for flowers, and has a way of taking up first one flower after another and making it fashionable. For several winters, however, he has worn in his buttonhole a single gardenia. In New York, as well as London, this flower has, through his setting of the fashion, been the correct boutonniere for men, and for some years it has as well been adopted by women. The duchess of Marlborough on several occasions has been seen wearing corsage decorations composed of as many as 20 of these blossoms.

VIOLET LOVED BY NAPOLEON.

"Violet crowned Athens" has come down as a simile for a city of flowers, one of reigning festivities. For, as the flower of Athens, the violet was greatly beloved throughout Greece and was naturally the emblem of Athens. Later, Napoleon chose it for his favorite flower. So strongly did Napoleon make his love for the violet felt that after he had gone to Elba the flower still spoke of him. In France it shortly became then a sign of imperialistic sympathy to be seen wearing it, or even to acknowledge that it was held in admiration.

KING OF ITALY LIKES THE TUBEROSE.

The king of Italy favors, among flowers, the tuberose. Not that he wears it in his buttonhole; rather he likes the high, slender arrangements of it which throughout its season are seen in almost every Italian home. The scent of it there, it would seem, permeates the whole land.

HOUSE OF CARNATION MRS. CHAS. KNOPF.

THE RETAIL TRADE

Dinner Table Decoration by A. McConnell.

One of the most notable decorations ever executed in New York and far exceeding anything that has occurred this season, was that at the Plaza hotel on the night of January 7, the occasion being the debut of Miss Marjorie Gould, daughter of George Jay Gould and wife. The decorations were by Alexander McConnell and his skilful assistants. Practically one entire floor of the immense Plaza was given up to the event and great numbers of American Beauty roses, orchids and lily of the valley were used in the decoration. The decoration of Miss Gould's table was a very skilful piece of work, the main scheme being a representation of three large flowering rose trees, the roses being white, on a sunken garden of lily of the valley. The trees were connected by garlands of lily of the valley arranged in a striking and beautiful way. At the other two tables the sunken garden effects were carried out with cattleyas, Australian tree ferns decorated with orchids being used instead of the rose trees. Palms, ferns and southern smilax were used in profusion about the halls, and there were arches of American Beauty roses.

St. Valentine Day Supplies.

There is very little that is actually novel in the way of supplies offered to the trade this year for St. Valentine's day. As usual the business will naturally center around the violet. In violet boxes, the regular line of folding violet colored oblong paper boxes are with us again. Then the red heart shaped box in three different sizes, which was here last year is again seen. Very attractive also is the violet heart shaped wicker hamper (so called Japanese), this is very neat and in but one size. One of the few novelties of this season is the heart shaped box with forget-me-nots and bleeding hearts on a white ground. A similar box, new this year, has violets on white ground and is offered in two sizes for 100 and 200 violets respectively.

Violet ribbons and cords are offered in variety. These cords are about three-quarters of a yard long and all are tasseled, the two most inexpensive being a medium wide cord and one of a heavier grade. In this violet shade a braided cord on the same order but very heavy is also seen. Phantom gauze cord with satin edging and tasseled ends is attractive and not expensive.

One of the neatest offerings in this line is a violet ribbon shot with green and pink bows on the end. In the regular supply of ribbons there is the usual assortment of violet shade, white pink, Nile, scarlet and Mais, are also appropriate for St. Valentine's day. A fancy ribbon about two inches wide with slender green bars on a violet ground is very neat. The same ribbon in solid violet is also good.

Pearl corsage pins in all shapes and sizes are shown and are as neat as they are inexpensive. Of course the violet foil will not be forgotten. Very appropriate for milady's bouquet. Green foil also should not be forgotten and in many cases would be quite as attractive as the violet. Violet wax paper is offered and helps finish the fancy hampers and boxes noted above.

Funeral Designs.

Funeral work is the most important factor of the retail trade. Little money is made by the selling of cut flowers, for when a customer comes in with 50 cents or $1 he or she expects what often costs the retailer more. Then again, we must figure the loss by waste. Now to the shop that has orders for a good funeral trade many of the profit leaks, such as waste of stock are eliminated—for if the clerk or shop keeper knows his business everything can be used up, even the stemless roses.

This subject is one upon which much can be said. Discretion in sizing up a customer, whether he will spend $2 or $2.50, is the most important thing. After having judged your man, don't fall back into the old rut of 25 years ago and talk a gates ajar, or a broken

Store of Alex. McConnell, New York.

wheel, but rather suggest something original, presuming that your man wanted to spend, we will say, anywhere from $25 to $100—which, in large cities, is no uncommon thing. Why not then suggest a handsome bunch of American Beauty roses with a clump of violets just where the bow of ribbon is fastened? Or, for another, a bunch of longiflorum lilies with a clump of mignonette 25 to 50 or 50 to 100. A wreath of cattleyas or violets and gardenias; a casket cross of violets with a bunch of orchids and Adiantum Farleyense, a wreath or cross of Killarney roses with Farleyense and mignonette.

CASKET COVERS OR BLANKETS.

These are two different things, although some mean them as one and the same. The casket cover is made to conform to the casket being on a wire frame. This was formerly used to a greater extent than now as the later caskets are of the open style. The casket cover, if such it is, is first covered with smilax. Then the flowers used would depend upon the age of the deceased. Some handsome covers we have seen were made of Bridesmaid roses with a band across of lily of the valley or violets, then garlands of Bridesmaid looped around the same. Perhaps the choicest combinations would be one of solid violets and Adiantum Farleyenses with a band of cattleyas; the garlands here would be alternately of violets and cattleyas.

Speaking of palls or blankets, a piece of albatross is procured, according to the size desired. This, when covered with green, is ready for the flowers which are treated as for the casket cover only that the garlands are eliminated. I made one of these a little while ago of violets and Adiantum Farleyense, placing diagonally in the center, a casket cross of gardenias. This made a choice pall.

A short time ago I had occasion to visit a fellow florist who was about to make a design. Trouble he was having in plenty and what he was saying would not look well in print. One by one he would try to place his flowers but each stick would break. Was it the fault of the stick? No, the whole fault lay with him, as it so often does, in the mossing. Houses will fall on poor foundations and likewise, no design can be turned out if its foundation is not properly started. In taking the design apart we found half as much again moss as was required and fully a half spool of thread. When sending the boy to the cellar to moss a design, go with him and show him first to pull the moss apart—then see that it is dampened. Show him how to take the moss loosely and not to pack it in as hard as possible. With the design filled, let him tie it in securely and at the same time use as little thread as possible. With this done the main trouble is overcome.

See that the design, be it a pillow, cross or wreath is not backed with tin foil, but rather covered with galax or ferns. Many designs are spoiled by the over use of lettering. It is true that many people wish it—but many times a good salesman can talk them out of it, and at the same time give the customer a richer and neater design. Presuming a delegation from some car shop drops in asking to be shown some designs. In many instances the clerk digs out a book of photographs instead of taking pencil and paper and drafting for his customer some standing design richly put together, that will catch the customer nine times out of ten.

Years ago a car made for a railroad man went or a horseshoe for the shoer, but we have outlived that age and time and today people want more and more original designs. Some one comes in and says, "I want some flowers for a grave that will last." Don't advise an immortelle wreath or a wreath of galax. Suggest an empire wreath which is simply a crescent wreath opened at the narrow part and brought to a point. This is mossed perfectly round and sweet bay or green leucothoe leaves used pinned on solid giving the effect of a model or chiseled wreath. Then in the center or thick part of the wreath a cluster of sprays, and, by working in a handsome bow of purple ribbon, one has a dignified design. For another, nothing gives better satisfaction, if properly put together, than a crescent wreath of boxwood. This dark green foliage stands the storms better perhaps than anything we know of. Take it, say at Christmas, and work into it a cluster of red berries, place it on a grave and it is good for four to five months.

Remember, workers, whatever your design might be conform and work to it. Don't make a wreath look like a mound as is so often the case, or, as I saw some time ago, a standing cross festooned from the top to the arm and then some which gave it the appearance of a ship's mast. Above all things be artistic from the smallest to the largest work; give a little touch of originality for it pays tenfold.

C. A. SCHNELL.

DINNER DECORATION AT PLAZA HOTEL, NEW YORK, JANUARY 7, 1909, BY ALEX. McCONNELL, AT THE COMING OUT OF MISS MARJORIE GOULD.

Ice Box Cooling Machine.

ED. AMERICAN FLORIST:—

We are contemplating the erection of two ice boxes in our stores, the dimensions of the boxes being 3x9x8 and 5x8x7 feet respectively, to be equipped with an ice machine. We wish some reader would enlighten us on the practicability of such cooling machines, and what would be the proper temperature of a flower store ice box. K. F. C.

Those who have tried ice machines consider they are so far superior to the old methods of cooling by ice that in no instance have we heard of any one discarding or thinking of discontinuing the machine after once installed and in good running order. The main advantages of cooling by machinery are: The elimination of dirt and mess incident to filling the box with ice; the even temperature that can be obtained by an ice machine properly equipped; the economy of space in the box, showcase or refrigerator.

To keep any kind of flowers successfully an even temperature is absolutely necessary, a variation of 5° is often fatal; in fact, the temperature in most florists' refrigerators fluctuate more than this, possibly 10° to 15°, caused principally by carelessness in leaving the door or doors open. For carnations a temperature of about 45° is excellent, with a free circulation of plenty of air, not crowded either in the vases or the vases in the box. Too often carnations are ruined by overcrowding; they delight in plenty of fresh air. With an ice-machine the temperature can be kept much drier and consequently the carnations are much harder and crisper; too much dampness will cause sleepiness; in fact, they want to be kept as dry as possible. Roses will stand a damper atmosphere, but still, a dry air will not injure them, as long as an even temperature is maintained. Roses will lose their color under a fluctuating temperature far quicker than two or three days storing under an even temperature.

Ice boxes of the size mentioned should be cooled easily with a 2-ton or even a 1-ton refrigerating machine. With a 2-ton machine, expansion of the size of the coolers would be possible with no additional expense. If the machine is not to be run almost continually during warm weather, then brine tanks should be installed, they acting as a storage battery, holding the temperature over night or for even a little longer period. A plant of this kind should be installed for about $1,000; by some concerns for less and others more. The best and easiest power to use is electricity, being far less trouble to handle and only using and paying for current when necessary.

S. S. PENNOCK-MEEHAN CO.

We try and keep our ice box as near as possible between 45° and 48°. We find that, when it can be arranged, natural cold, secured from outdoors is better than artificial cold, but this is, of course, impracticable when the store is located in a large block or in a closely built up city section.

GEO. ASMUS.

ALBION, N. Y.—The west wing of the greenhouse owned by Julian Duquette, in South Clinton street, was destroyed by fire January 27. The office was burned, but the south part, built last summer by Mr. Duquette, was saved. The damage to the building and contents is estimated at $1,500.

DESIGN BY CHAS. P. MUELLER, WICHITA, KANS.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Cosmos.

Where there is a demand at retail for a good variety in cut flowers a few plants of cosmos may be grown for early cutting under glass. The seed may be sown at once in a pan or flat and the plants pricked out as soon as ready. When sufficient call for it exists a bench may be devoted to its culture, but the ordinary retailer will not need a great deal of it and it is not a good flower to ship long distances. There are frequently small side benches or corners in the houses that can be used for such plants without taking up much valuable space and in such positions the plants may be set out when ready. Plant them in such a position that a wire or stout string can be run around them as after they grow to a considerable height the plants are apt to fall over when crooked stems and poor foliage will result.

Forget-Me-Nots.

These little flowers are not in great demand but there is always a welcome for a few. The house in which they are grown should be kept cool and the treatment that is effective for pansies and violets is also suitable for the myosotis. Where plants were pricked off into frames as we advised in the fall they will now be good stock for lifting and transferring to the benches inside. Earlier plants that have flowered should be lifted and thrown out to make room for these unless they are needed for stock, in which case they may be returned to the frames and planted, there to remain until it is time to work up stock outdoors. The soil in the benches on which the plants are growing should be kept fairly moist but a little sulphur should be applied to the pipes occasionally in order to check mildew which sometimes makes its appearance and is destructive to the plants.

Antirrhinums.

At this time antirrhinums will be taking a decided brace and the increasing light will help the growth and advancing flower spikes. The earliest planted stock, which is depended upon to produce large heavy spikes, will probably be benefited by a light application of a good concentrated fertilizer which may be stirred into the surface soil and watered in. Apply it when the soil is in a medium state, not very dry or very wet, but just in the condition that it will take a watering without injury. Later plants will not yet have sufficient hold of the soil to require feeding and the roots will not have used up the nutriment in the soil. Here the only attention necessary will be to stir the surface soil frequently to admit the fertilizing properties of air and light and to enable the grower to see how the soil is in regard to moisture. As the growth gets more vigorous, the roots will be extending more into the soil and will take more moisture. Any plants that are not making the headway they ought to should be examined, and if it is apparent that the water is not getting away from the roots freely the supply must be diminished; otherwise they will continually get worse and the

crop will be a failure. Before the spikes get sufficiently heavy to break or bend from the spraying see that they are supported in some way, as they are very brittle and easily break out.

Bulb Stock.

Where bulb stock was potted early and kept cool it will be always ready when wanted for bringing into flower. Nothing is gained by holding the bulbs out of their pots for the better they are rooted the finer the flowers will be. Narcissus Golden Spur has, of late years, become very popular for forcing on account of its fine yellow color, handsome flowers and early flowering habit. It may be brought into flower in about 16 days in heat and in a temperature 60° at night in about three weeks. Single tulips will need about the latter time and it is too early yet to force many double varieties. The treatment after taking them out of the plunging material has been too often noted to need extended reference but we may again warn growers against exposing the tender, pale yellow shoots too suddenly to the light or giving strong heat at the start. Bring them on gradually in both respects. Keep the soil in the flats well watered and avoid wetting the plants much overhead and all will be well.

System in Routine Work.

The more one has to do with greenhouse work the more he is impressed with the necessity of keeping the necessary details strictly up-to-date. When a bench of roses needs disbudding today a man can do it in far less time and with greater benefit to the plants than if it is left for a few days. The buds will be larger, they will have taken more of the necessary vigor of the plants to extend and their removal is more of a shock to the plants' system when they have to be cut off with a knife than if rubbed off with the fingers. The "do it now" idea has perhaps been overworked but "do it as soon as it is necessary," would be a fine idea to keep before the minds of section men and helpers generally. The present is a busy time; all plants take a brace and there is much to do in providing for their needs. Thousands of dollars are lost every year owing to those in charge of growing establishments not having such a line on their work that they can foresee what is coming and prevent waste. A good manager when he propagates 10,000 roses or carnations should have in mind the future of these plants and be prepared to take care of them right along. If they have to be left getting potbound while the benches or soil are being prepared for them there is a dead loss in the wasted vigor of the plants. If they have to be potted into larger pots there is a great expense, not only in the matter of pots and potting, but in the increased work of carrying the finished plants to the benches and the greater trouble of planting. This may seem a small matter when only a few hundred plants are concerned, but it is the system that is in fault and it is characteristic of some places that these things are left more or less to chance while in others the hand of the manager is seen everywhere in the freedom from friction and the easy way in which the work always appears to be done on time. Little details are attended to before they have time to grow into big ones while the routine work seems to do itself, so little does it disturb the arrangements of the place. Contrast this with the place where the foreman or manager is always rushing about with three or four things in hand at once, some parts of the work always left to be gone over and the men being given orders of a contradictory nature. No need to say which place will show the better balance of profit at the end of the year. The thing is important and well worth looking into by all, from the proprietor of the smallest greenhouse establishment to the foreman or manager of the acres of glass in our largest plants.

The Foley Cup.

Awarded to F. R. Pierson Co., at National Flower Show, 1908, for Best New Rose, With White Killarney.

Control of Thrips in Cucumber Houses.

On March 14, 1908, we received a report from Streator, Ill., of serious injury to cucumbers from thrips. A visit was made March 25, and it was found that two crops of cucumbers had been practically ruined by them. At the date of my visit it was impossible to get any young plants started in the beds, for as soon as they were set they were immediately covered and so completely that the plants were soon stunted and worthless. The owner, who had 10 large houses, reported that he had tried about everything on the market but that anything that killed the thrips injured the plants to such an extent that he was forced to discontinue its use. He was using hydrocyanic acid gas for exterminating white fly and had also tried it for thrips as strong as one ounce of potassium cyanide to each 1800 cubic feet of space but without appreciable results.

The experimental evidence as to whether thrips could be killed with the above named gas was decidedly conflicting. Prof. Sirrine of the New York Experiment Station in a paper before the American Carnation Society, February, 1900, included Thrips tabaci among the worst carnation pests. He found that carnation buds were injured by hydrocyanic acid gas even when used at the rate of one-half ounce per 1,000 cubic feet. More important, however, is his statement, "I have used hydrocyanic acid gas on this pest when on ferns as strong as three ounces to 1,000 cubic feet of space, allowing it to act all night without injuring the thrips in the least. We will say nothing about the condition of the plants."

ROSE WHITE KILLARNEY.

As Grown by F R. Pierson Co , Tarrytown-on-Hudson, N. Y.

WHITE KILLARNEY GROWING AT THE SCARBOROUGH RANGE OF THE F. R. PIERSON CO., TARRYTOWN-ON HUDSON, N. Y.

Dr. W. E. Hinds in May, 1900, reported the results of some tests for the suppression of greenhouse thrips in which he used .155, .2 and .31 grams of potassic cyanide to 30 cubic feet with excellent results. This is using the gas at the rate of one ounce of cyanide to 3,000 to 5,000 feet in an all-night fumigation. All the thrips were killed in his tests. It will be seen that the results were quite different, for, in one case, from one-fifth to one-third ounce of cyanide gave positive results, while in the other three ounces failed to kill thrips.

In Circular 37 of the United States Division of entomology it is stated that Scott, McGowan and Meteor carnations withstood one-tenth gram of 98 per cent cyanide per cubic foot for 15 minutes without injury. This is a little over three ounces per 1,000 feet although we must not fail to consider that the time for the exposure is very short. "This will kill about 90 per cent of the plant lice but will not kill thrips."

Since the use of hydrocyanic acid gas has passed the experimental stage in the repression of cucumber insects it was decided that some tests should be made as to its value in killing thrips. Three connected houses each 15x300 feet, of the short roof type, were offered us for a test with the gas. There were one and three-fourths houses in young plants 12 to 18 inches in height, and one and one-fourth houses of large bearing plants. The old plants were infested with white fly and all the plants were completely covered with thrips. Even the blossoms were filled with thrips. Twenty-five staminate flowers picked in various parts of the house yielded 81 specimens of thrips. The pistillate flowers were apparently as badly infested and the failure of the plants to set fruit was attributed to this cause. This view was found to be correct but the amount of the damage was not obtained. It may be well to call attention here to the fact that on some plants like strawberries the greatest injury is done to the essential parts of the flower, and in others as pears and other fruits the total destruction of the crop is brought about by the action of thrips in the blossoms even though they also seriously damage the foliage.

The houses contained 108,000 cubic feet of space and it was decided to use one ounce of the cyanide per 1,000 cubic feet. Accordingly 12 one-gallon jars were placed in each center walk. One pint of water and then one-half pint of commercial sulphuric acid was poured into each jar. The potassium cyanide, 98-99 per cent pure, was weighed out in 3-ounce lots and put into double paper bags. Three men, each carrying 12 of these bags of cyanide started from the further end of the houses and walking abreast rapidly dropped one bag in each jar as they passed down the houses and outside. This was done just before six p. m., March 25 which had been a warm sunny day with a strong wind. The latter had very much lessened about five p. m. The houses were filled in a few minutes with a cloud of the gas and every jar was a success. The liberation of the gas was considered ideal.

The next morning the houses were opened and the odor was very slight. The maximum temperatures recorded in the two ends of the houses was 70° and 72° rising to 74° in the morning. The old plants were uninjured. The young plants showed a paleness around the edges of the leaves and in some cases these edges drooped. Much of this trouble disappeared when ventilation and syringing were given. In the house farthest from the wind the terminal buds were scorched and the trouble increased toward the service building. This house was next a glass partition which tended to prevent the escape of the gas and it seems to have banked on the side next the service building and on the side farthest from the wind. The young plants in this half house never made any growth from the terminal buds but threw out good strong side branches which later yielded as good a crop as any plants in any of the houses and nothing but a careful examination would have disclosed any difference between them and normally grown plants. However, the results were too severe upon the plants to advise anyone to fumigate with this strength of the gas although it is often seen recommended for white fly.

The results in killing thrips were excellent. A large number of counts were made. Plants nearest the jars showed an average of 965 of the thrips killed and those least exposed as low as 86 per cent killed. The average of all counts made in all parts of the houses showed that 8.3 per cent of the thrips were alive. The counts were later confirmed by another man and the evidence is conclusive that thrips can be killed with the gas at the rate of one ounce per 1,000 cubic feet and upon plants that will stand the strength of gas mentioned it is an effective and important insecticide. It is quite important that we realize that this was one of the largest experimental tests ever conducted with this gas and it was under commercial conditions instead of being carried out in small greenhouse laboratories.

On April 30, the white fly having become as abundant as before, and the thrips even more abundant, it was decided to fumigate with hydrocyanic acid gas. The strength used was only one-third that used in the former experiment. This gave us an opportunity to observe the value of a weaker strength on thrips. The methods used were the same as in the former experiment except that only one ounce of potassium cyanide was placed in each jar. The next morning no injury whatever could be discovered on the plants. Examinations were made of leaves in equidistant points throughout the houses and and the proportion of 198 live to 23 dead thrips was found which indicates that on the average about 11 or 12 per cent were killed. The white fly were all killed.

The results show that one ounce of cyanide to 3,000 cubic feet is just as

effective as a greater strength for the white fly while thrips were not very much decreased and, unless the treatment could be often repeated, the thrips would not be checked. No opportunity presented itself to try any strengths between these two extremes but any amount that can be used with safety to the plant must often be used because of the rapid multiplication of the insects. If, from later experiments, the conditions under which it is safe to use, on cucumbers, as great a strength as one ounce of potassium cyanide per 1,000 cubic feet can be found it certainly is the most effective in exterminating thrips.

Thrips on upper surface, 327 killed, 27 alive, or 92.37% killed.
Thrips on lower surface, 160 killed, 87 alive, or 65% killed.
Thrips on both surfaces, 487 killed, 114 alive, or 81% killed.

Those leaves which were wet on both sides with the spray show dead thrips on upper and lower surfaces and it is quite certain that when live thrips were found that they had crawled over the edge of the leaf after the spray was applied. At warm temperatures the thrips travel rapidly over the leaves. The dead and live thrips on upper surfaces were adults. The immature forms feed on the lower surface of the leaves and consequently a

DEPARTMENT OF HORTICULTURE AND MARKET GARDENING AT AMHERST.
Instruction Building and Greenhouses at Massachusetts Agricultural College.

Owing to the danger of injuring the plants in using hydrocyanic acid gas sufficiently strong to kill thrips in large numbers, it was decided to test the efficiency of sprays. It was known that thrips were easily killed from the contact with tobacco extract sprays but the cucumber plant is injured by the spray. The greenhouses were equipped with a Skinner automatic watering apparatus and the test was made of spraying followed almost immediately by a syringing. As a preliminary test one-half a row containing 50 plants was sprayed with a seven cubic centimeter solution of pure nicotine in two gallons of water. The application was made with an auto sprayer and auto pop nozzle.

The adult thrips were feeding on the upper surface of the leaves in large numbers and the conditions were favorable for the test. The plants were sprayed without purposely wetting the underside of the leaves since it was not possible to wash off the spray on the lower surface of the leaves. The results were as follows:

SPRAYING WITH PURE NICOTINE IN WATER.

Plant No. 1.

Leaf	Upper surface. Alive	Upper surface. Dead	Lower surface. Alive	Lower surface. Dead
1	0	31	10	4
2	1	24	3	63
3	0	6	10	0

12	0	3	0	1
13	0	3	0	2
	16	158	20	65

less number were killed. In order to cleanse the plants as soon as the counts were made and before the spray had time to dry upon the leaves the water was turned on and the spray material and dead thrips washed off.

It was observed in these trials that thrips when wet with the spray gave a few struggles and died. Thrips becoming excited from any cause often run through drops of water on the plant and some may be killed by attempting this with spray material. However, the only way to kill any considerable number of thrips is to hit them with the spray. No injury resulted to the plants from this treatment although the plants were restocked from the unsprayed plants in the same bed.

On April 30, two beds in another house were emptied of the old plants and replanted with young plants which had been thoroughly sprayed before planting. One bench of old plants was left in the house for a month after the young plants were set. These old plants were full of thrips and continued to keep up a supply as fast as the insects were killed on the young plants. Large numbers of the pests had been shaken off in the removal of the old plants from the beds. As soon as planted thrips infested the young plants in such numbers that had not treatment been begun immediately the plants would have been destroyed in a week.

It was desired to test whether by a daily application of spray it was possible to rid the young plants of thrips without injury to the plants. After each spraying the insecticide was washed off but the spray was kept off the lower sides as far as possible. The two beds were divided into halves. Eight plants on each half next the center line were left unsprayed as checks while the remaining 92 plants on each bed were sprayed with a different insecticide as follows:

Plat.	Insecticide.	Per Cent Pure Nicotine.	Amount per Gal.
1	Nikoteen	28.52	12cc.
2	Nicoticide	40.04	7½cc.
3	Nico-Fume	41.52	7½cc.
4	To-bak-ine	40.47	7½cc.

The amount of nicotine was about the same, that is, a little over three cubic centimeters in each gallon of spray, the object being to find out if any of these insecticides injured the plants less than others or whether any possessed any additional agent or quality which rendered it more effective against thrips. Also it was thought that the gummy substance which coated the leaves would not be found in all of the materials tried. This substance while of value in killing thrips is detrimental to the cucumber plant.

The applications were made as early as possible, while the thrips were still on the upper surface of the leaves, otherwise the work may just as well be omitted. Examinations were made on five hills of each sprayed plat and on one hill of each check section, the latter receiving nothing but the syringing with water. The results show:

Average Number of Thrips per Hill.

Treatment.	May 6.	May 20.	May 26.	June 3.	Average.	Per Cent Thrips.
Nicoticide	10	20	22	13	17	9.28
Nikoteen	14	8	34	18	18	10.57
Nico-Fume	23	8	29	19	20	11.28
To-bak-ine	28	13	10	10	16	8.71
No spray	65	48	278	309	156	100.

The results are remarkably close together which is after all about what we might expect since equal amounts of nicotine were present in the sprays used. The amount of leaf injury was very slight

CONTROL OF THRIPS IN CUCUMBER HOUSES.
House at Streator, Ill., Where Experiments Were Conducted

and was the same from the different treatments. The injury consisted of a narrow line of dead brown tissue around the edges of the leaves. At one time it was feared that this would result in a bad attack of curled leaf but a week later when the plants were inspected the trouble had disappeared, the leaves being normal except that they had a slight brown edge.

The gentle spray of the watering apparatus did not seem to affect thrips materially. At least it can be said that water must be applied with force which can only be done when the plants are not in bloom and at any time the work must be carefully done to avoid tearing the foliage. Water must be directed against the lower surfaces of the leaves with the object of destroying the young thrips as soon as they hatch, for it has been found that adult thrips are difficult to kill with water.

After June 1 the plants were thoroughly sprayed twice a week and syringed with water to remove the insecticide. When examined June 5 and 15 the plants were so entirely free from thrips as to make it almost impossible to find any specimens on them. The removal of the bed of old plants mentioned above eliminated a prolific source of infection. The check plants were seriously injured by thrips and their condition was very noticeable to any one passing through the house. The number of thrips per hill had increased from an average of 309 per hill to over 1,000. As many as 89 thrips were found on some of the larger leaves. Upon a large plant which has grown to the top of the house 1,000 thrips can exist. However, the oldest leaves were dry and of no value to the plant. When the plant is stopped in its growth and there is no longer a supply of fresh green leaves to keep up the plant's activities owing to the progress of the thrips' attack, the plant must soon succumb.

From the foregoing experiments it is evident that thrips can be killed by hydrocyanic acid gas at the rate of one ounce per 1,000 cubic feet. Also that spraying with 40 per cent nicotine preparations, using them at the rate of one teaspoonful to a gallon of water, will control thrips on cucumbers without injury to the plant, provided the spray is immediately washed off. If all the plants are treated and the spraying thoroughly and persistently done, even though the application has to be made each day for a time the thrips can be suppressed. Any insecticide that can accomplish this result when a house is thoroughly stocked with thrips can be relied upon to keep thrips in subjection if used regularly from the beginning of the season.

A. C. BEAL.

Canadian Weather.

During the recent cold snap the following temperatures were recorded from the undermentioned points; the figures given are below zero: Edmonton, 30°-42°; Calgary, 28°-34°; Lethbridge, 25°-40°; Medicine Hat, 28°-40°; Battleford, 34°-48°; Prince Albert 36°-50°; Swift Current, 28°-36°; Regina, 30°-39°,

F. R. Pierson Co. Will Build.

In 1906 when the F. R. Pierson Co., Tarrytown, N. Y., put up the last 55 feet 6 inches by 300-foot house, the firm anticipated erecting its duplicate the same year, but they even went so far at that time as to prepare the concrete trench for the heating pipes. The work, however, was delayed with the idea of executing it the following year, but then the "hard times" came along, and the proposition was laid over. But now with every prospect bright for business betterment, they have placed their order with the Lord & Burnham Co. for that duplicate house. It is to be the section iron frame construction, with a slope to the south of 26½ degrees, and to the north of 37½ degrees, making the height at the ridge 23 feet 5 inches. The sides are 6 feet 6 inches high from grade to the ice clearing plate at the eaves. The iron rafters are welded at the eaves to the guaranteed wrought iron posts which are partially imbedded in the concrete sides, and extend into the solid concrete footing 2½ feet below grade. Reinforced concrete is used up to the usual height of boarding. This concrete is tapered off near the top of the inside face so that it does not project beyond the cypress sash sill which is bolted to it by cast iron knees imbedded in the concrete. It has been customary to hinge the side sash directly to the facia on the under side of the galvanized plate, but the facia is done away with and the sash are hinged directly to the plate.

When the first house was ordered Mr. Pierson insisted on having an arrangement of the side ventilation that would extend the least possible into the walks; so Lord & Burnham Co. got busy and designed a specially compact gear with 6-inch arms, and carried the shaft directly through the posts which serve as bearers. As a result no part of the apparatus extends into the walks beyond the line of the side heating pipes.

In the ridge ventilation the operating rod is brought directly down through the bench and a miter gear used with the hand wheel placed at side of bench. This leaves the bench entirely free. The 15/16 x 1⅞-inch cypress bars are screwed directly to the angle iron purlins. The bars on the southern exposurs are spliced at one of the purlins with the L. & B. patent splice plate and metal weather seal.

VIEW OF THE LORD & BURNHAM HOUSE COMPLETE.

Massachusetts Agricultural College.

E. O. Orpet, of South Lancaster, gave a most instructive talk before the floricultural classess at Massachusetts Agriculture College January 27. Mr. Orpet spoke of the history of orchids, with special reference to the rapid increase in their production by American growers during the last 10 years. He also covered the cultural problems in a very clear, concise manner, and showed the blooms of many specimens which gave the students a splendid idea of differences in genera and species. The hour proved too short a time for the consideration of the subject, and Mr. Orpet met the students informally in the evening and answered many questions, regarding orchid culture. On February 3 George Sinclair of Holyoke will speak on "Chrysanthemum Culture." The observation trip on Saturday will be to the extensive commercial range of A. N. Pierson, at Cromwell, Conn. On the trip down it is expected there will be time for a visit to the noted rose garden at Elizabeth Park, Hartford.

French hall, the new instruction building for the departments of floriculture and market gardening, and the new greenhouse range, are nearly completed. Various horticultural associations, and prominent growers in the state, will be invited to attend the dedication, the date of which will be announced later. In this connection the senior class in floriculture plans to hold the annual flower exhibition. Many growers of special crops have signified their intention of sending material for this exhibition. These shows prove especially instructive to the students in their work with varieties, and in giving them an idea of the splendid quality of material the owners are placing on the market.

E. A. WHITE.

The Cyanide Trust in Germany.

Consul-General Robert P. Skinner, of Hamburg, advises that according to information, the manufacturers of cyanide of potassium and cyanide of soda in Germany have pooled their American interests, and arranged with a certain New York firm to act as their agents. They will not sell to other American firms. The agent of the manufacturers' combination is located in Hamburg. The consul also gives the name of another Hamburg firm through whom American purchases might be made. All these names are recorded at the Bureau of Manufactures, Washington, D. C.

Glass.

Jobbers report having a fair supply of glass on hand with prices low, at 90 and 30 per cent discount for double strength glass. They say that considering present conditions that those intending to build will make no mistake in ordering now, and should not be surprised if prices advance shortly. Inquiries are coming in freely.

THE concrete bench still has many problems for the grower.

THE prices of high grade lumber are stiffening and apt to go higher.

HARRY J. VEITCH, of Chelsea, Eng., has recently been made chevalier of the order of Leopold, a much coveted honor in Belgium.

H. B. BEATTY was re-elected a director of the Manufacturers' Light, Heat and Gas Co. by the largest vote in the history of the company.

OUR Springfield, O., correspondent mentions the fact that there is a possibility of several establishments joining in providing a central heating plant. Where there are a number of firms with their greenhouses close together this seems a good idea if the details of the scheme could be carried out satisfactorily and there seems to be no good reason why they could not.

"THE ROSE SLUGS" is the title of a recently printed bulletin sent out by the Department of Agriculture. It is from the pen of H. F. Chittenden and contains much useful matter. The American rose bug, its life history, distribution and remedies for it, the bristly rose slug and its enemies and remedies are all treated on somewhat in detail, and we may have occasion to further refer to this useful publication.

Ladies' Society of American Florists.

The members of the Ladies' Society of American Florists, return thanks to the Indiana florists for the royal entertainment given them at Indianapolis during the carnation meeting.

MRS. CHAS. H. MAYNARD, Sec'y.

Society of American Florists.

REGISTRATION OF ROSE.

A protest having been filed against the registration of a rose offered by the Dingee and Conard Co. under the name Charles Dingee, the registration of the same is held in suspense. Under the rules of this society the original matter of the registration and the protest against it have been placed in the hands of Robt. Simpson, certified to the undersigned by the secretary of the American Rose Society as the chairman of their committee in charge of such matters, and no further action will be taken by this society pending the result of the investigation to be made by the committee of the American Rose Society.

W. N. RUDD, Sec'y.

Plant Notes.

All growers are not aware of the excellent plants of gloxinias that may be grown from seed in one season. Seed sown now will give splendid flowering plants by August, bright, with good foliage and many flowers in 4½-inch pots, which they will quite hide with their foliage. Were gloxinias only easier to ship in good condition they would probably be very popular market plants. To get the best results in a short time careful culture from the first is needed.

Dimorphotheca aurantiaca the new annual from Namaqualand was recently figured in The Garden, showing it to be a very beautiful plant. The flowers are single of a very deep orange with a salmon flush to the petals, the general appearance being a good deal like that of an arctotis. It is a most distinct and showy plant and should become popular.

Much of the beauty of the newer and better forms of cyclamen lies in the fine, handsomely marbled foliage, which makes an attractive plant even when not carrying flowers. But when coupled with the large and beautifully colored flowers there are few plants that can compare with them.

Maurandia Barclaiana Alba is a fine variety for vases, window boxes, etc. The seed should be sown in February and the plants grown on and transferred to their permanent location from 4-inch pots.

Shipping Flowers to Chicago.

ED. AMERICAN FLORIST:—

I have several times shipped small consignments of flowers to the Chicago wholesale market, but the returns are not in accordance with the market prices as quoted in the AMERICAN FLORIST. Kindly explain the difference.

Indiana. E. H.

This is easily explained. If you were in the habit of shipping regularly to a good commission firm this firm would expect your consignments and lay itself out to find an opening for them whenever possible. But no firm, however anxious to do business, can be expected to give the same attention to consignments arriving irregularly, and probably most frequently when the market is full, as to its own regular shippers. Growers who have a home market for their regular production and ship to a wholesale market when times are dull and flowers plentiful cannot expect good results from the latter and, although this may not be your case, you will be quite able to see where the commission man gets his troubles. Again flowers change in value from day to day, and the prices given in our market reports can only be approximate even with the best of care.

The Need of Printed Letter Heads.

ED. AMERICAN FLORIST:—

We have received a large number of replies to advertisement of Baronne Rothschild violets, on paper with no printed heading, and with signatures or addresses so carelessly written that we find it impossible to decipher the same. Probably the signatures look plain, possibly "pretty," to the writers, but to a stranger they are quite the opposite. When will florists learn to use printed stationery? F. W. FLETCHER CO.

Auburndale, Mass.

Wholesale Prices to Amateurs.

ED. AMERICAN FLORIST:—

We have just located in central Illinois a case of a wealthy private amateur buyer of horticultural stock, seeds, plants and bulbs, who has taken the great pains (!) to print for himself a letter head with his name and the words "flower and nursery stock," by which stationery, in writing to wholesale houses, he thinks evidently to secure wholesale or florist rates.

We for some years have been making it our rule that people of this class who are trying to secure our goods at wholesale prices, shall state to us that they are buying our stock to sell again at a profit. When we submitted this proposition to the above mentioned party he promptly advised us that we need not send any catalogues but that he could place his business with one of the best firms in the United States who wanted all he could give them at wholesale prices.

We believe it would not be out of line for the secretary or some committee of the Society of American Florists to compile and publish a list of private buyers (and we suspect there are a number of such), who are securing goods at whole-

sale prices and distributing them in small lots to their friends at cost, to the material injury of the regular trade of florists and nurserymen in local cities.
VAUGHAN'S SEED STORE.

Important Foreign Exhibitions.

May 19-21.—National Horticultural Society of France, annual exhibition, le Jardin des Tuileries, Paris, France. Abel Chatenay, secretary, 1 Rue St. Aubin, Vitry-sur-Seine.

May 25-27.—Temple show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. E. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

Meetings Next Week.

Baltimore, Md., February 8, 8 p. m.—Gardeners' Club of Baltimore, Florists' Exchange Hall, St. Paul and Franklin streets.

Boston, Mass., February 13, 11 a. m.—Massachusetts Horticultural Society, Horticultural Hall, 300 Massachusetts avenue. Address on "Plant Breeding," by Prof. Herbert J. Webber, Ithaca, N. Y.

Rochester, N. Y., February 8, 7:30 p. m.—Rochester Commercial Florists' Association, 24 Stone street.

St. Louis, Mo., February 11, 2 p. m.—St. Louis Florists' Club, Bowman hall, 1023 Locust street.

OBITUARY.

Miss Katherine Sheedy.

Miss Katherine Sheedy, who had charge of Madden's Flower Shop at Jersey City, N. J., died at Flatbush, L. I., January 20, of Bright's disease, after an illness of only four days. Miss Sheedy, who was 33 years of age, had been connected with John Madden's business for the past 10 years, and was very highly thought of by all who came in contact with her. The funeral, which took place from her home in Jersey City, was largely attended by her former associates in the trade. Miss Sheedy was buried in Poughkeepsie, N. Y., where she was born.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—As gardener on private or commercial place; 14 years' greenhouse experience. Key 775, care American Florist.

Situation Wanted—By young man with one years' experience; willing to learn and not afraid to work. Key 771, care American Florist.

Situation Wanted—By first-class grower of roses, carnations and general stock; 22 years' experience; married; references. Address Key 774 care American Florist.

Situation Wanted—By gardener and florist on private place near Chicago; married 12 years' experience; sober and industrious. Address JOHN KAWALEC, 975 S Washtenaw Ave., Chicago.

Situation Wanted—By grower with 12 years' experience in roses, carnations and general stock; best of recommends; age 25, married, please state wages etc. Address JOHN NIERESCHER, 1422 E. Summit, Alliance O.

Situation Wanted—By thoroughly competent grower of roses, carnations, 'mums and general stock, have had 15 years experience; strictly sober and honest; can furnish best of reference. Key 769, care American Florist.

Situation Wanted—Experienced florist; all-around man; 45 years; German, like to have position as working foreman or manager in medium sized commercial establishment. Address E. R., Box 150, R. F. D., R. 1, Fairhaven, Pa.

Situation Wanted—Landscape draughtsman, graduated, good designer, experienced in executing, seeks position where there are chances to promote business; middle west or west preferred. Key A 100, General Delivery, Chicago.

Situation Wanted—By an A No 1 rose grower as foreman on commercial place; 32 years of age; life experience; able to handle help to best advantage; please state wages and full particulars in first letter. Key 772, care American Florist.

Situation Wanted—On a good private or commercial place by a man who understands his business; good grower and manager; best references; can take full charge, or would accept position with promotion in view. Address Key 762, care American Florist.

Situation Wanted—By a sober and all-around florist; 16 years' experience in Denmark, Germany and America. Good grower of all kinds of pot and bedding plants, etc. Competent to take charge of a retail place. Please state wages in first letter. FRED. FOLDEN, 611 Raymond Ave., St. Paul, Minn.

Help Wanted—First class market gardener; one accustomed to growing vegetables in greenhouses and hotbeds. None but first-class man need apply. Address, with references, Key 747, care American Florist.

Help Wanted—First-class market gardener, one accustomed to growing vegetables in greenhouses and hotbeds, with some knowledge of carnations and bedding stock, and able to take full charge of 25,000 feet of glass; married man preferred; none but strictly sober person need apply; references. Key 753, care American Florist.

Wanted—German, 35 years of age, 20 years' experience in every line of the trade would like to exchange letters with the widow or daughter of a florist. Key 763, care American Florist.

For Rent—Fifteen acres near large city in Indiana on shares for trucking, small fruits and poultry, to an experienced man with small capital; good river bottom land good five room house, stable and outbuildings, team, wagons and all garden implements furnished; an abundance of water for irrigation; only experienced men with some capital to put in hot beds, help, etc., and understanding intensive methods in truck gardening need apply; write, giving full particulars of experience, family and references. Address Key 765, care American Florist.

For Sale—Established wire design manufacturing business; snap if taken at once. Address Key 722, care American Florist.

For Sale—Some good 3 inch pipe guaranteed sound, 6c foot; several small boilers cheap. W. H. SALTER Rochester N. Y.

For Sale—5000 feet of glass; no competition; can sell more than you can grow at highest price; write for particulars. DWIGHT GREENHOUSES, Dwight, Ill.

For Sale—An old established, first-class retail store with palm houses attached, in Chicago, south side; reason for selling, other business. Key 659, care American Florist.

For Sale—Greenhouse 6,000 feet glass near center of growing town of 7,000 inhabitants in heart of Rocky Mountains; good trade; no competition; price $4,000. J. H. FREEMAN, Salida Colo.

For Sale—A fine wholesale place in eastern state, 20 acres of land, well stocked; carnations a specialty; 20,000 feet of glass, up-to-date in every respect; good reasons for selling. Key 749, care American Florist.

TO LEASE.

Established florists' business in a thriving southern city; 60,000 ft. of glass sale for everything you can grow, house well stocked with roses carnations, lilacs, orchids, ferns, palms, etc., which will be sold at a reasonable figure; large plot now under cultivation suitable for truck gardening also six-room dwelling adjoining same; best of reasons for wishing to lease at a low price. Address **Key 773, care American Florist.**

For Sale.

For immediate delivery one No. 6, No. 7, No. 8 Superior Internal Boiler.

Superior Machine & Boiler Works,
125-133 W. Superior St. CHICAGO, ILL.

For Sale.

Secondhand Boilers, Tubular and Firebox shapes. Suitable for hot houses and the like where low pressure is required. Let us know what you want, we have it.

RYAN BROS.,
29 N. Clinton St., CHICAGO.

For Sale.

One second hand Hot Water boiler capable of heating 3,500 ft. 4-in. pipe.

Superior Machine & Boiler Works,
125-133 W. Superior St., CHICAGO, ILL.

Position Wanted as Superintendent or Manager.

Man of exceptional ability and broad experience in the production of high grade stock now open for engagement; eleven years in last position as manager of one of the large plants of the country. Correspondence solicited from those looking for a first-class man and where the production, heating, general construction and managing ability will be a factor and appreciated. Address **Key 766, care American Florist.**

FOR SALE.

Established wholesale and retail florist business, consisting of 25,000 feet of glass. This is one of the best places in central New York; everything being nearly new and in first-class condition. Has two boilers either one capable of heating the entire plant. The stock consists of a general line of plants and cut flowers, and is well equipped in every way. Here is your opportunity for a paying business. Come and look the place over and the plant and the books will prove all that I say. Would also consider a proposition to rent.
E. J. BYAM, 408-16 Elm St, Rome, N. Y.

WANTED

March 15th. An experienced, energetic gardener thoroughly acquainted with hardy stock, garden making, grading, trimming, etc. Permanent position to right party. State references and salary.

The Elm City Nursery Co.
NEW HAVEN, CONN.

Toledo, O.

Our club meeting on January 27 was largely attended, the main attraction being exhibits of some of the new carnations. We had asked several introducers and orginators of new varieties to favor us with a few sample flowers of their new wonders, and succeeded in interesting Bassett & Washburn, Chicago, Highland Park Greenhouses, Highland Park, Ill., and W. H. Shumway, Berlin, Conn. The other introducers had no flowers to cut on account of propagating, or did not pay any attention to our inquiry. All were well pleased and we believe that some orders will be the result for the exhibitors.

Thos. Nagee, Harry Heinl and Geo. Bayer were elected as judges, and after a long and careful scrutiny by these three good growers, the score for the three varieties was announced as follows, the scale of the American Carnation Society being used: O. P. Bassett received 85 points, Lucille 80 points, while Edward was not in a condition to be judged, as same arrived in poor condition.

Of our local growers, Krueger Bros. exhibited Sarah Hill and Lawson-Enchantress. Sarah Hill was not near so good as shown by the same growers at our December meeting, Lawson-Enchantress was liked, Emil Kuhnke was awarded the prize for the best 12 red carnations, own seedling. The color was about the same as O. P. Bassett, but was not in it for size or stem.

J. L. Schiller exhibited a few Primula obconica, his specialty, in 4-inch pots; the plants were excellent, measuring almost two feet in diameter with large flower heads, whose individual flowers measured over 1½ inches across. They were of the Arendsi type (gigantea), grown from the originator's strain, the judges commenting very highly on same. This new type of primrose is now of such a high standard and so useful as a cut flower, that it will soon become, in fact is now, indispensable in every retail establishment.

Business has been good with everybody of late and all look hopefully into the future. The Dutch travellers are as thick as weeds, but they are not receiving the orders they used to get, as our growers cannot see the profit any more in bulbs, which would justify them to buy more. They are usually glad to come out even on the end of the season. Of course, we must have a certain amount for variety's sake, but there is always some loss, which cannot be prevented; the bulbs have got to be paid for, whether sold or not.

Little glass will be added this season to the existing establishments, and so far only Schiller contemplates building two propagating houses each 9x125 feet, of which one will be used during part of the year for cyclamens, one of his successful specialties.

SCH.

Dethorning the Cactus.

Twenty tons per acre of the best live-stock forage known is to be produced by the system of "dethorning" the common or desert cactus, says the Washington Times. The cactus is the one thing that will grow practically all over the American desert. It has been supposed to be absolutely worthless, because, while it contains the most valuable combination of nutritive elements, the spines make men and animals avoid it.

But the bright young men of the Department of Agriculture have found a way to subdue it. They propose simply to have the cactus sown in drills, carefully tended, and made to develop a big crop. Then when it is ripe and ready for the harvest, a man with a plumber's blow will walk up and down the rows, blowing its flame over the plants and thereby burning off the prickly spines.

The treatment has been tried out, and is a complete success, it is declared. Cattle and sheep like the cactus when the spines are removed, and this process never fails. The spines singe off just as the pin-feathers come off a spring chicken when it is held in the flame of a burning newspaper. Then the hogs, cattle, or sheep can be turned into the cactus field and will get fat on the expurgated cacti. It is explained that there is so much water in the cactus that livestock fed on it need to drink very little; another vital recommendation for desert farming. If allowed to grow two years before it is harvested the cactus will produce 20 tons to the acre. It doesn't need to be replanted after it has once been eaten off.

Elmira, N. Y.

Lea Compton has resigned his position as shipping clerk with the United States Cut Flower Co. and joined forces with the Compton & Babcock Insurance Co. His place as shipping clerk has been taken by Charley Edgar who was with this firm a couple of years ago. The American Beauty and tea roses are looking fine with prospects of a heavy crop for the month of February. Carnations have been off crop but are coming in again in grand shape. Several thousand carnation cuttings have been potted already and now the boys are busy potting up the first batch of rose cuttings and as this firm only takes the best wood for propagating they will have some nice plants when planting time comes along. X.

NEW BRUNSWICK, N. J.—Sidney Smith, who came to New York a month ago, was found dead in Smith & McNeil's Hotel, January 31, having shot himself. Smith had been employed recently by Freeman Woodbridge and before that by Mary Wilkins Freeman at Metuchen. He had no relatives in this city. Acquaintances knew only that he was well educated, a gardener, and held advanced socialistic views which he was fond of expounding. He avoided any questions dealing with his past. He had been at the hotel three days.

NEW ROSE WHITE KILLARNEY

We Know You Will Want to Buy White Killarney.

Every live, progressive, up-to-date grower who has seen it is buying it; but when you buy White Killarney, be sure you get the right White Killarney (the Waban variety). When you buy from us you get the variety that has been exhibited and certificated and the one that has attracted such favorable mention. There have been several white sports of Killarney which are very much inferior to the White Killarney that we have been offering and exhibiting—the one that has made the reputation for White Killarney. The superiority of our sport is admitted even by those who have the other sports.

It may seem strange, but the bud of White Killarney is much larger and fuller than the bud of the pink Killarney.

If you are in the vicinity of New York, we should be glad to have you call and see White Killarney growing at our Scarborough range, and you will say at a glance—as everyone who has seen it growing—that it is by far the best white rose that has ever been placed on the market.

It is not only a good winter-flowering rose, but is good the entire year, for which reason it will supersede Bride and Kaiserin, neither of which covers the entire season. In addition to this, it is a splendid shipper. We have shipped flowers as far as Dallas, Texas, and they have reached destination in perfect order. In confirmation of this statement, we take pleasure in reproducing a letter just received from Mr. Willis N. Rudd, Secretary of the Society of American Florists, dated January 18th, in which he writes as follows:

"DEAR MR. PIERSON:—I cannot refrain from writing you and expressing my admiration for the White Killarney as shown at Chicago on Thursday. It is an exquisitely beautiful thing and attracted much attention. I took half the blooms home with me, and they were finer on Saturday than they were at the show. The record is that these blooms were shipped from Tarrytown, staged and exhibited during the afternoon. They were then carelessly wrapped up in a box, and remained in that box until one o'clock Friday morning, at which time I reached home; improved in quality up to Saturday, and were in fairly presentable condition on Sunday.

"In addition to being the most beautiful white rose of its class which I have seen, this demonstrates its splendid keeping and shipping qualities. W. N. RUDD."

We were awarded Silver Cup at National Flower Show, Chicago, for best new rose with White Killarney.

We have a fine stock of White Killarney but, owing to the large number of orders that are constantly being booked, if you want early delivery, it will be wise to place your order before long. Better do it now while you think of it. You will regret it if you do not buy it this season in quantity, and you will not regret it if you do. It is the best new rose that has been introduced in years.

Strong Plants, 2 1-4 inch pots, own roots, $30.00 per 100; 250 for $70.00; 500 for $125.00; 1000 for $250.00. Grafted plants, $5 per 100 additional

F. R. PIERSON CO., Tarrytown-on-Hudson, New York.

Chicago.

MARKET EASY.

The market, except possibly for roses, is easy. Carnations are coming in in fine quality but there is hardly demand sufficient to clear off the stock. American Beauty roses are not quite so plentiful as they were, but still more than enough to go around. Bride roses are much in demand for funeral work. Bridesmaid roses are coming a bit more freely, but Killarney is practically off crop with most of the growers, and there is none too much Richmond seen. Lilies are coming in freely and callas are more than plentiful. Bulbous flowers have become a staple article of the market, all kinds and all colors now being seen. Very fine stock is the rule in this line, Mignonette, freesia, etc., are all plentiful. Violets have been a glut on the market with very little outlet. The fore part of last week was not so bad, but during the latter part of the week complaint of wholesalers about the slow sale of violets was general.

NOTES.

Fred Lautenslager of the Kroeschell Bros. Co. reports having booked orders for two of that firm's largest boilers. Wm. Kroeschell says inquiries are coming in very freely and suggests that orders for greenhouse material in general should be placed now as prices are apt to go higher and orders can now be booked at present prices for future delivery.

James Bombenger will tear down his present place this summer and move around the corner to 6425-29 Woodlawn avenue, where he will erect a fine modern retail store, 18x30 feet, and about 10,000 square feet of glass for his decorative and flowering stock. Two new boilers will be installed.

The E. F. Winterson Co. has a large supply of fancy flower decorated heart shaped violet boxes, in two sizes, for 100 and 200 violets respectively. On Monday this firm reported receiving a shipment of 250,000 leucothoe sprays.

The A. L. Randall Co. is now receiving white lilac, one of the specialties of Emil Buettner, the Park Ridge grower. This firm also reports a remarkable demand for cut orchids, especially cattleyas and cypripediums.

B. Eschner, of M. Rice & Co., New York, has been stopping for several days at the Great Northern hotel with an extensive line of samples, including some very attractive seasonable novelties.

Chicago Florists' Club meeting Thursday evening this week at 7:30 o'clock at the Union restaurant, 111 Randolph street, Chicago. The recently elected officers will be installed.

The old greenhouse range of Richard Gloede in Evanston which was sold to the sanitary district commission has been acquired by Joseph Craig.

The western mail was much delayed last week by the storm, many letters being received by wholesalers on Monday, they should have had before.

The firm of Bassett & Washburn have decided to remain where they are having signed a lease for another year.

The Poehlmann Bros. Co. is now cutting some extra choice long stemmed Richmond roses.

There will be a meeting of the experiment station advisory board at Urbana, February 5.

Zech & Mann are now receiving a choice and extensive line of bulbous flowers.

The J. B. Deamud Co. is now receiving fine yellow tulips and single jonquils.

Geo. Reinberg is cutting some choice Cattleya Trianæ.

E. C. Amling has been showing Rhea Reid roses.

Visitors: Joseph Heacock, Wyncote, Pa.; B. Eschner, of M. Rice & Co., and Sidney Wertheimer, New York; Martin Reukauf, of H. Bayersdorfer, Philadelphia.

Memphis, Tenn.

An unusually severe spell of weather accompanied by high winds (64 miles an hour) visited us January 27-28-29, doing much damage by blowing out glass, tearing down awnings, signs, smokestacks, etc. The thermometer showed the unusual record of 10° above zero. No plants were injured inside of the glass structures in this section that we have heard of, but all boilers and heating apparatus were compelled to put forth all their energy to keep up anything like a normal temperature. All our greenhouse structures in this section are not built to keep out such a searching cold wind, and low temperatures were the order while the wind lasted, which was three full days and nights. In the open borders on account of the very mild winter so far, tea roses were breaking at all their eyes, and the new growths were one-half inch long. Forsythias were in full bloom, and our own yellow jasmine was a shower of gold. The peach tree buds were swelling, and jonquils and narcissi were showing color but they have withered away and some of us are wondering what the elements will show us next. Reports from the market gardeners say that this cold snap has seriously damaged the stock of sweet potato seed in the cellars. As this city is a center for sweet potato slips, the price will probably be higher this spring. November sown cabbage plants were not damaged where covered with sash. The florists have had a better month than in January, 1908. The catalogue plant and seed trade opened up earlier on account of mild weather, but no doubt it will slack up until another mild season comes along. No new additions planned for the coming year, except one that was started last year, a $50,000 new plant that got cold feet and has not as yet got warm again. Some of the stores here are buying from the new plant at Columbus, Miss., at prices somewhat lower than Chicago stock, but as yet the variety is not tempting enough to pay express from Columbus for one package and another from Chicago. The express companies already have more than their share of the profits. If the Chicago wholesalers will go out of the Heinz pickling works and send fresh stock, Chicago will still be in the lead and the others in the class of the "also ran."

None of the local florists were in Indianapolis, but a goodly number are making plans to go to Cincinnati in August. If possible an effort will be made to get up a bowling team, as we have several crackerjacks among the craft here.

H.

JOLIET, ILL.—Albert C. Rott had a fine window decoration for McKinley day and sold over 4,000 carnations.

LAKE FOREST, ILL.—At the meeting of the Horticultural Society held on January 27, it was decided to hold a flower and vegetable show this coming summer, about the second or third week in July, and according to the interest taken by both employers and gardeners it will, to all appearances, be a greater success than any show ever held in this neighborhood.—J.

St. Louis.

ROSES SCARCE.

The first part of the week was warm and springlike, but Friday a great change came. A blizzard, the most severe in years, and zero weather were with us Friday, Saturday and Sunday. Quite a number of carnations were sold on McKinley's birthday; many more would have been sold but for a blinding snowstorm, accompanied with a terrific wind. Violets have been plentiful all week. Roses continue scarce, but carnations are holding up well. Fancy ferns are now selling at $2 per 1,000.

NOTES.

The Florists' Club has mailed a circular to its members and their friends announcing the regular meeting of the club at the Bowman building, Thursday afternoon at 2 p. m. The club will hold its yearly carnation show to which all interested are invited and which will be especially interesting to growers. At 5 o'clock the committee have arranged for an entertainment and smoker at a nearby café. Everyone is cautioned to inform their folks that they will not be home for supper and a good time will be given to all.

We regret the accident to Will Osseck of the firm of W. C. Smith & Co. Will went down into the cellar, stumbled over a box and sprained his ankle. He is confined to his room and carefully nursed by his good and faithful wife. We hope soon to see him in harness again.

Monday several of the retailers were busy at the opening of Penny & Gentiles, dry goods emporium. Several thousand carnations were given away to the ladies.

Dr. William Trelease will lecture next Tuesday at 8 o'clock at the Second Baptist church on Henry Shaw and the Missouri Botanical Garden.

Phil J. Goebel, Jr., had a portion of the roof of his house blown off by the gale on Friday.

Chas. Murray has opened up a store at 4450 Easton avenue, a good locality.

W. F.

Richmond, Ind.

A great many of the carnation men visited this city after the Indianapolis convention, calling at the establishments where their favorite flower is a specialty. At the E. G. Hill Co.'s new plant there was much to be seen of interest in the way of new seedlings, of which there are many promising varieties, running principally to scarlets and reds. The construction and arrangement of the new greenhouses at this establishment proved hardly less interesting to the visitors than the contents, and Mr. Hill and his associates were called upon to answer a great variety of questions, many of them very puzzling.

Joe Hill is very much disappointed with the concrete benches, and it will not be surprising if this is replaced with other material at an early date. Most of the experts who saw these benches think the blocks are too thick and wide, and that the interstices for drainage should be more numerous and not so large. It may be stated that the blocks in the bottom of these benches are about 16 inches wide and three inches thick, and the drainage interstices between them about 1¼ inches wide.

Chas. Knopf showed the visitors as fine a lot of carnations as may be found anywhere, and this condition of high culture applies to the stock in the cutting benches as well as to the flowering plants. Carnations Mrs. Chas. Knopf and Ruby were in fine condition, but another of this firm's novelties, Admiration, proved the greatest attraction. Mr. Knopf grows roses fully as well as carnations, and the house of Richmond at his place was a sight worth seeing.

E. T. Grave has Carnation May Day and a number of standard varieties in excellent condition. Mr. Grave booked quite a number of orders for his novelty.

The E. G. Hill Co. will move two of its old greenhouses and rebuild them at the new plant this season.

TRADE UNUSUALLY GOOD.

The conditions of business the past week were very satisfactory, stock in nearly every line having a very heavy demand. Roses of good quality were in fair supply and were cleaned up. Carnations of the best quality sold unusually well and were in good supply. The cheaper grade was hard to move. There were not very many carnations used this year for McKinley day, probably owing to the unusually bad day we had. Lily of the valley and violets had a good demand and the supply was fair. Bulbous stock is in good supply and finds a satisfactory demand. Green goods are a little scarce just at present but will soon be plentiful again.

NOTES.

The growers are now burning a good share of their profits as the thermometer is staying around zero. It was difficult to keep the houses warm owing to the strong, cold wind.

From reports, everyone was well satisfied with the recent convention at Indianapolis. Quite a number attended from this city.

The stores had very attractive displays for McKinley day.

CONVENTION ECHOES.

The carnation meeting was closely followed by the worst storm of the season. With the mercury close to zero and the wind blowing nearly 40 miles an hour, things continued interesting, although not pleasant. The only damage reported was a few lights blown out of the gable end of A. Wiegand & Sons' house. Repairs were made before serious damage resulted.

Misses Elsa and Olga Bertermann entertained their visiting fellow members of the Ladies' Society of American Florists at cards in the palm garden of the German house during the carnation meeting.

Eugene Dailledonze and wife, J. A. Valentine and Fred Lautenschlager were the last of our guests to leave; the latter secured several good orders for boilers during the convention.

It is painful to report that "Handsome Harry Balsley" was not recognized by many of his numerous friends. A mustache more or less makes all the difference in the world.

W. W. Coles, Kokomo, is looking for a site suitable for a wholesale cut flower establishment, as one of his sons wishes to embark in the business.

Bertermann's yellow carnation, James Whitcomb Riley, and Baur & Smith's white, Shasta attracted many interested visitors.

Bertermann Bros. Co. report a heavy call for jonquils this season. J.

Mt. Sterling, Ky.

The season thus far, excepting Christmas, was not very satisfactory, but since January 1 there has been a gradual increase in sales and prices, and we are looking forward to a brisk spring trade. The Christmas trade was more than double that of last season.

Graser & Humphries have opened a salesroom and office at 45 West Main street, where they find a ready sale for pot plants and cut flowers. They grow 6,000 carnations for winter bloom. Besides this, they force bulbous stock, Lilium longiflorum, callas and a few roses. They have completely remodeled an old ramshackle place and added almost double the amount of glass.

PORTCHESTER, N. Y.—J. Piorkowsky, the proprietor of the Rosery, on South Main street, has recently secured the lease of the two greenhouses located on the Maple Terrace property of Mrs. S. Rodriguez, on Grace Church street.

STOCK ON THE SHORT SIDE.

King Winter, with his panoply of snow and ice, has camped right here on Manhattan island. His sudden arrival has made hard work for the street department, the traffic police squad, and disarranged the marcelle waves of the pretty girls. Thus far, the cut flower business has not suffered much. While the business of last week cannot be said to have been heavy, there was considerable doing with a tendency toward shortage in good roses. If business had been rushing there would have been almost a dearth. As it was, special American Beauty went up 75 cents with a prospect, at this writing, of further advance. Good roses of all varieties seem to be off crop and with present weather conditions, we may yet see high prices. However, from the view point of the retailers, prices are already high enough, but of course, it makes a difference whose ox is gored. As noted last week, there is no surplus of bulbous stock, it being sometimes hard for the buyers to find as many good tulips as they want, but as a rule everybody gets what they are looking for, and it must be acknowledged that a light supply is better than a surplus. The only stocks that can be classed as really plentiful, are carnations and violets. McKinley day, January 29, did not seem to cause any particular flurry in carnations, though it was better than last year, when dealers claimed that carnation sales were not up to the average.

February 1.—This was undoubtedly the coldest morning of the winter, regardless of the opinions of the weather sharps. Arrivals were light, some of them being frozen. Though the scarcity of good roses is pushing up the price, there is but little change in other stocks. There is no great surplus of anything, and if the demand was anywhere above normal, prices would soar. Latest advices say special American Beauty roses are selling at $1 each; Killarney at 25 cents and a general advance in all other leading stocks.

NOTES.

It is announced that the annual dinner of the Florists' Club has been postponed from February 20 to 27. As previously announced, it will be held at Shanley's, which is sufficient guarantee that it will be a first class spread. The services of an excellent orchestra has been secured and eloquent speakers, under the spell of beautiful women and choice blossoms, are expected to make a new record in oratory.

Through the vigilance of Traendly & Schenck and their employes, a series of petty stealings of flowers was brought to a close on the morning of January 26. On that date a man who has been under suspicion for a long time, was caught "with the goods," several bunches of lily of the valley, under his coat. He was immediately arrested and will undoubtedly get the limit.

Mrs. Coddington, the mother of L. B. Coddington, a well known rose grower of Murray Hill, N. J., died on January 31. What may appear as an unusual coincidence, was that, on the same date under the same roof, a child was born to Mrs. L. B. Coddington.

It is reported that J. J. Brozat of Bloomfield, N. Y., suffered considerable damage from fire in his range, on the night of January 31. Mr. Brozat is well and favorably known in the wholesale district of this city.

Wm. Mortimer, formerly buyer for the late W. H. Traendly and later with Chas. Austin on Thirtieth street has opened a retail store in the old Traendly place, Seventeenth street and Sixth avenue.

Another wholesale store seems assured at 50 W. Twenty-eighth street. Kessler Bros. being actively engaged in fitting up the storeroom directly over Geo. Cotsonas & Co., dealers in green.

Robert Craig and Julius Roehrs, Sr., sailed for Cuba January 29. No two men connected with the business could have more good wishes follow them.

New York and N. J. Plant Growers Ass'n

FIRST ANNUAL BANQUET.

The first annual banquet of the New York and New Jersey Plant Growers Association was held at the Hotel St. Denis, January 28. The attendance was very large. The tables were prettily and tastefully decorated. Many of the growers were accompanied by their lady friends, and at 7 o'clock the company took their seats. Much credit should be given the house committee for the banquet set before the guests. At the close of the banquet Julius Roehrs, of Rutherford, N. J., president of the association introduced F. L. Atkins of Bobbink & Atkins of Rutherford, N. J., as toastmaster.

The toastmaster outlined the growth of the association since its founding. It has at the present time about 30 members, and is continually growing. He said that the main object of the organization was for the growers to teach each other and outsiders how to grow plants and grow them well. He then called upon the only ex-president, Anton Schultheis, for the first speech. The speaker urged every member to do all in his power to bring in new members. He expressed his sincere regret that Julius Roehrs, Sr., was unable to be with them on this occasion, on account of illness. Mr. Roehrs has left for Cuba for a trip to benefit his health.

The second speaker of the evening, Robt. Craig, Sr., Philadelphia, in opening, said that he believed any body of organized men could do much more to forward any particular competition than an individual. He said that through P. O'Mara much had been done toward lowering express rates. He said that man's success depends much on himself, but after he has done all in his power as an individual, much more can be accomplished by an organization. After a most gallant tribute to the ladies, he said that he had been coming to New York for more than 35 years, and although he did not at the present time know nearly as many growers as he did a few years ago, he always felt at home among the men of the plant industry in New York. He gave an amusing account of his trip to New York, when a young man, and how he was taken in by a green goods man. The speaker urged the younger men of the trade not to be discouraged if they had but little to start business on, for the men who have accomplished most have started with nothing. He paid a tribute to Peter Henderson, the greatest of plant growers and to John Henderson, the greatest of cut flower growers.

The toastmaster then introduced Patrick O'Mara, who rose to the occasion with his usual Irish wit and eloquence. Seeing Robert Craig drink a glass of water, he raised his glass and said, "I drink water with Craig of Philadelphia. You know they have no good water in Philadelphia. They tell me it is so thick that a man cannot sink in it. Philadelphia, you know, is that suburb of New York where they sleep all the time, except when they come to New York to get their eyes opened by green goods men. Philadelphia, however, wakes up New York when it comes to plant sales. When it comes down to business, they are not so slow after all in Philadelphia." The speaker thought that the meeting had a very serious purpose, namely, to form a thorough organization.

The speaker felt that no man on earth had such a big heart as the man who cultivates growing plants. He is compelled to keep his eyes continually upon these growing things, and this gives him a sympathetic feeling for everything living. The Society of Plant Growers of New York and New Jersey is not by any means a trust, but is a mutual benefit organization, where mutual benefit of the highest type is shown. A good example of men organized for the advancement of their interests, is the Society of American Florists. Since the founding of this society tremendous advance has been made by the members in intelligence in floriculture. On questions of policy men of the S. A. F. stand foremost. They are possibly outranked by other men in wealth, but not in brains. The trade press of today has taken a decided step forward in placing before the public the true condition of the industry. The press is much freer today in imparting knowledge to the florists than it was some years ago. More humanitarianism is shown by them than by any other press representatives in the country.

The Society of American Florists may be likened to a nation, which settles broad questions of policy, and the local organizations, such as the Plant Growers of New York and Jersey to a state which settles municipal questions. Out of the members of the S. A. F. have grown these smaller organizations. In closing, the speaker expressed his great pleasure at being privileged to be present at the banquet, and to see so many of the ladies present. He said that a woman was man's conscience, and that no man had a conscience, who has no woman. He thought more benefit was derived from getting together and breaking bread over the same board, than could be derived in any other way.

The toastmaster then introduced President Hallock of the Florists' Club. In referring to the fairer sex the speaker said that the hand that rocks the cradle, rules the world, and usually rules the florists. The speaker took it upon himself to go back before the Christian era to show what our ancestors did to advance the interest of the public in floriculture. Homer felt it his duty to express the beauty and significance of flowers. Cicero also felt in duty bound to call attention to this same thing. If these ancient writers thought this necessary, how much more is it necessary for us to call the attention of our people to such things. He called the plant growers of New York and New Jersey the genesis and aborigines of horticulture. In this section specialists have probably made more money than the smaller growers. The departure from small plant growing is becoming alarming. Our national flower shows need exhibits from hundreds of growers of small plants. More of the general showing from all growers, whether large or small should be encouraged.

At this point the toastmaster called attention to the fact that the organization had the honor of having a woman member, who was present at the banquet. Miss Mills felt that she did not care to make a speech, but for her part had contributed Japanese vases to be given to each of the ladies. The Julius Roehrs Co. of Rutherford, N. J., furnished the orchids which had been placed in these vases on the tables. With the singing of the Star Spangled Banner, Auld Lang Syne, America, and Die Wacht Am Rhine, the party broke up.

Much credit should be given to A. L. Miller, John Scott and Herman Schoeltzel, members of the dinner committee. The banquet was a decided success from both a business and social standpoint. Under the leadership of such men as President Julius Roehrs, Vice President A. L. Miller, Secretary W. H. Siebrecht, Jr., and Treasurer Herman Steinhoff, the plant growers of New York and New Jersey should look forward to a most prosperous coming year.

SAGINAW, MICH.—Carl Roethke, who is still at Mt. Clemens undergoing treatment for rheumatism, is not making as good progress as his friends hoped for.

Notice to First-Class Retail Florists

I can send to New York City, on short notice, White Lilac, Yellow Daisies, Mignonette, Single Daffodils, Tulips, all colors, etc. These flowers are all A No. 1 and shipped at Philadelphia prices.

TRADE FAIR.

Business is moving quietly along, a fair amount doing but no extra demand to speak of. The commission houses report a fairly good shipping trade, particularly for the higher grades in all lines. Stock, particularly roses, is scarce, shipments from all growers alike coming in very light. It is said that this condition will continue for a week or 10 days, when the sun, which is daily getting stronger, will bring them forward. The scarcity of short stock is more noticeable than in the better grades. Carnations are in good demand and appear to clean up daily at fair prices. Some very good stock is now coming in. Spring flowers, such as tulips and daffodils, are becoming much more plentiful as are also freesia and sweet peas, all of which help to relieve the situation. Orchids are more plentiful than at any time this season, and the price has softened a trifle; $5 is the price per dozen for cattleyas, with 50 cents straight for the pick of the stock. Azaleas, primulas and bulbous stock in pans and baskets help to make the store windows attractive. Some nicely arranged baskets of ferns and plants of Azalea mollis with their brilliant orange shades were the feature of Pennock Bros. window the past week.

FLORISTS' CLUB MEETING.

The February meeting of the Florists' Club was well attended; carnations were the feature, but the expectations of the members in seeing some of the new ones was not realized as none of these of which great things are expected were to be seen. Messrs. Stroud, Kleinheinz and Campbell Bros. had vases of well grown standard varieties. Batchelor staged a yellow Cineraria stellata, and W. F. Lecroix a vase of extra fine lilac. President A. M. Herr, of the American Carnation Society, read a paper on the new varieties and gave a general account of the recent carnation exhibition and convention which was very interesting. The topic for next meeting is to be the gardenia on the growing of which Wm. Kleinheinz will read a paper. An inter-city bowling contest is to be held between the clubs of Washington, Baltimore and Philadelphia, the first match to be played in Baltimore on February 11.

NOTES.

The local contingent of the delegates to the carnation convention returned on Saturday last and were of one accord that it was the finest exhibition of the kind they had ever seen. Joseph Heacock, who exhibited a vase of his seedling, Dorothy Gordon, said that although cut nearly two days before they were staged they were better the second day of the show than on the first and that this was the case with many other varieties. S. S. Pennock also spoke in the same strain. As a judge he has had to examine many of the entries very closely and said that the general excellence of the exhibits was very marked. Of the novelties he said the new yellow, J. Whitcomb Riley, was very distinct and likely, if a good bloomer, to be much in demand. Edward Stroud is quite elated over winning first prize for his vase of 100 Lady Bountiful over a lot of good stock which was brought a comparatively short distance while his was shipped so far.

C. H. Turner, the genial representative of the King Construction Co., Tonawanda, N. Y., has been canvassing this neighborhood the past week. He says that the growers all report much better results than last season and he looks for quite an addition to the glass area of the wide awake operators in the near future. Dennis Connor, the local representative of the Lord & Burnham Co., is also optimistic and has several important jobs in embryo, as it were. He says the addition for A. Harvey & Son to be erected this spring is 43x250 feet of iron frame construction, an up-to-date house in every respect. Mr. Connor also reports having a contract for a house 21x150 feet for Alphonse Pericot at Collingdale.

John Langford, the colored florist formerly of Thirteenth street below Market, died on Saturday last. Deceased at one time did quite a business at this stand, which he conducted for over 15 years. He commenced business selling flowers on the street for Mrs. Karl Muller and afterwards for himself and then took the store. For the past few years he peddled flowers on Chestnut street, his specialty being open American Beauty roses.

Wm. Graham has taken a position with the Habermehls, where he is to have entire charge of their decorating. Mr. Graham is a floral artist in the full sense of the word and Messrs. Habermehl are to be congratulated on being able to obtain his services. The Graham store and greenhouses in Germantown are for sale and should prove a valuable place for any one wishing to take up the retail end of the business.

The Leo Niessen Co. say it is now receiving some of the finest cattleyas it ever handled. The blooms are certainly extraordinary for size and color. American Beauty roses and carnations have been in great demand the past week; the shipments being light they are ordered as fast as they arrive.

W. & H. J. Evans of Second and Bristol streets, had a tussle with a boiler on Sunday night last; some of the tubes gave out on this, the coldest night of the winter, and it was with extreme difficulty that they managed to keep from being frozen out.

Joseph Heacock, his son James W. Heacock, and foreman Robert Jamison, visited Chicago and took in some of the large rose and carnation growers; they were much pleased with the enterprise that was everywhere apparent.

Wm. McKissick & Bros. say they have business for all the stock coming in, particularly for all of the special class, which appears to be all ordered ahead. They say they want to see flowers more plentiful.

Herbert Steinmetz of Eighth and Arch streets, has to retire on account of poor health, and offers his business for sale. Here is a good opening for an energetic man. K.

Boston.

TRADE IMPROVING.

There has been an improvement in business, well distributed and completing the most lively week of the season. The market is undergoing a complete reaction and a decided shortage in every line, except violets, has boosted prices to the limit. Our winter is in full blast with zero weather prevailing throughout New England. Snow has fallen to the extent of eight inches in the suburbs. The rose supply, while extremely limited, is showing to much better advantage than for some weeks. Killarney and Richmond are in unusual condition and more like the roses which established their career successfully. American Beauty has seldom been exhibited in such rare form and is returning good profits to the grower. Carnations are selling better than for some weeks past. The stock has grown stronger and also the demand. Bulb stock is increasing and meeting with an even sale. Flowering plant stock is scarce and varieties are limited. Cyclamens, lilac and azaleas form the strongest combination.

NOTES.

A. Roper of Tewksbury has returned from the carnation convention well pleased with the success and honors accorded his carnations. His Bay State and new scarlet were shown to be in the pink of condition, notwithstanding the long journey entailed. Mr. Roper controls a model establishment to which he is continually adding and greater feats than yet recorded are expected from him.

Rumors are being heard of the plans now on foot aiming to effect an organization of the local growers and sales agents to secure accounts at stated times. Such a move has been talked of many times before, but now has become a necessity and we hope to see the organization safely and speedily launched.

Henry M. Robinson & Co. are handling at present a line of superior orchids, especially cattleyas. B.

Cleveland.

TRADE SATISFACTORY.

Trade the past week has been very satisfactory, as all lines of stock have been sold at a good price, and at the time of this report more could have been used. Weather conditions have shortened the supply of all flowers, and naturally stock has brought a better price, with all lines practically cleaned up. We trust these conditions will continue for some time, as they will put new life in the business transacted. Ferns in this city are becoming good property; the trade in this item is quite good, and good stock will command a higher price in the near future, as the stock from the east does not seem to be satisfactory.

NOTES.

In our last notes the date for the carnation show was given as February 10. Instead it should have been February 8, Monday evening. All out-of-town exhibitors should have their stock addressed in care of Isaac Kennedy, secretary, 2610 Detroit avenue. All packages should be prepaid.

The Cleveland Florists' Exchange is selling a novelty violet box for Valentine's day—a violet colored box with a heart and cupid dart embossed upon the cover in red, which has been a ready seller.

All those attending the carnation convention have returned full of praise for the show and the good things they had seen.

Mrs. Isaac Kennedy is recovering nicely from the operation she underwent at St. Vincent's hospital some time since. FORESTER.

HALIFAX, N. S.—Patrick Kenefick died at the residence of his son, 20 Fenwick street, January 21.

ROSES STILL SCARCE.

The continued scarcity of roses is very noticeable and at times it is impossible to get sufficient stock to fill the retail orders, but with brighter weather the crop will improve. American Beauty is still off the list and Richmond is away off crop, while all other varieties are very scarce. In carnations there is a plentiful supply of good quality, and often at reasonable prices, though none are going to waste. Violets have become plentiful, but the weather is hardly favorable for street wear, so that they are not moving as quickly as desired. Bulbous stock is now the main factor for the retailers and all windows show quantities, daffodils predominating. Orchids are still fairly plentiful at $35 per 100.

NOTES.

The regular monthly meeting of the Florists' Club brought out a good number of members; the arranging for the prize list for the fall show occupied the evening, and a number of important changes were made, mainly in the classes for the retailers who wish to compete for the made-up work. The prize money in this class was increased 50 to 100 per cent, so as to bring in outside competition, and the main prize for funeral designs will include, besides the money offered, a gold medal to cost not less than $25.

Grobba & Wandrey are drawing the plans for another range of eight houses, which is becoming an annual affair with them. In my last notes Mr. Wandrey was given the credit for a bouncing baby boy. This was an error from my informant, as Mr. Grobba claims that, although there is a partnership for the growing of flowers, that when it comes to the infants he alone is responsible up to the present.

At the funeral of the archbishop of Canada and one of our most prominent financiers, H. C. Hammond, the past week, friends of both requested that flowers be omitted; both were men that were highly esteemed, and otherwise numerous floral emblems would have been sent.

STOCK SCARCE.

We have had for the past two weeks or so, more wintry weather, but we have escaped the violent storms and blizzards which have afflicted our neighbors to the north, east and south. Up to this time the mercury has not gone down to the zero mark and there have been few great wind storms. A great deal of fog and cloudy weather has prevailed, and conditions generally have not been favorable to the production of good flowers. Indeed the supply of all grades has been rather scant and the market would have taken more. Roses and carnations are scarce, by comparison; but single violets, hyacinths, freesias and similar stock is in supply beyond the requirements of the market, which does not absorb anything like all shipments. Lily of the valley does not seem to go well this year and northern shipments do not move satisfactorily. There is a great round now of social affairs, dinners, receptions, card parties, etc., and business ought to be at its best, but the scarcity of good material has a bad effect.

NOTES.

The Florists' Exchange is extending its business, doing a considerable shipping business with southern points, from Washington to Jacksonville. Several hours in express deliveries are gained over cities to the north of us, and doubtless this branch of its trade will steadily enlarge.

Mrs. Schuler-Thomas, of Saratoga street, has been critically ill, and though her condition is somewhat improved, grave fears are felt as to the outcome.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

L. W. WHEELER, with the Braslan Seed Growers Co., has returned to the coast.

BOSTON, MASS.—W. W. Rawson & Co. are celebrating their twenty-fifth anniversary this year.

W. H. BARRETT, the seed grower of Adrian, Mich., sends out a fine steel portrait of A. Lincoln as an office card.

CALLA BULB growers in the vicinity of San Francisco report that their young seedlings have been injured by the severe frosts this winter.

TRAVELERS representing the market garden seed houses have been active since November near all large cities and report trade increased over last season.

INDIANAPOLIS, IND.—Chas. Schwake, representing Chas. F. Meyer & Co., was a visitor during the carnation convention last week, as was also J. C. Vaughan, Chicago.

PART of W. J. Fosgate's ranch at Santa Clara, Calif., was under four feet of water during the recent floods, and A. J. Pieters' onions were under water about one day, caused by one of the main ditches being out of order.

PHILADELPHIA, PA.—W. Atlee Burpee & Co. say their mail order business has opened up splendidly and, while some few days have not been quite up to the corresponding days of a year ago, yet, on the whole, they are very well satisfied.

CHICAGO—The onion set market continues strong at about $2.75 for white; red and yellow, $2—Contract prices on the board of trade February 3 for grass seed were noted as follows: Prime timothy, $3.80, white clover, $15.—Visitors: C. Madson and C. L. Kunz, of M. G. Madson Seed Co., Manitowoc, Wis.; Wm. Hageman, New York; W. C. Langbridge, of Jerome B. Rice, Cambridge, N. Y.; Harry Bunyard, of A. T. Boddington, New York; A. J. Pieters, Hollister, Calif.

LOUISVILLE, KY.—Theo. Cobb and C. B. Coe, of D. M. Ferry & Co., Detroit, Mich.; W. H. Grenell, Saginaw, Mich.; C. L. Kunz and M. G. Madson, of the M. G. Madson Seed Co., Manitowoc, Wis.; Arthur B. Clark, Milford, Conn.; W. C. Langbridge, Chas. P. Guelf, Jerome B. Rice and Jerome B. Rice, Jr., Cambridge, N. Y.; A. W. Livingston, Columbus, O.; Watson S. Woodruff, Orange, Conn.; S. F. Leonard, A. C. Leonard, Sam Sibley, C. W. Smith and John F. Geary, of the S. F. Leonard Seed Co., Chicago; Arnold Ringier, of the W. W. Barnard Co., Chicago; Leonard H. Vaughan, Chicago; G. H. Hogg, of Hogg & Lytle, Toronto, Ont.; H. A. Bertoli, of Bromfield & Colvin, Bay City, Mich.; A. L. Rogers, Rogers Bros., Alpena, Mich.; and C. N. Keeney, N. B. Keeney & Son, LeRoy, N. Y., were noted at the canners' convention this week.

American Seed Trade Association.

ED. AMERICAN FLORIST:—

In your issue of January 30 you make me say that our association had a meeting in New York; it was the executive committee. I see that you question the legality of holding a convention in Canada. Our constitution expressly provides that the membership shall consist of growers and dealers "in this country and Canada" and that is the only place the countries are mentioned. The constitution not only does not say anything about where we may meet, but, as a matter of fact, we held our convention at Toronto in 1894.

C. E. KENDEL, Sec'y.

Proposed Tariff Legislation Changes.

ED. AMERICAN FLORIST:—

In reply to R. Van der Schoot's letter would say that he must have been misinformed as to the attitude of the American Seed Trade Association on the tariff question relating to bulbs. The tariff committee has placed with the committee on ways and means of the house a schedule which suggests a duty per 1,000 of $1 on tulips and gladioli, $1.50 on narcissi, begonias, gloxinias and lily of the valley, $3.50 on hyacinths, $5 on lilies and $10 on peonies, and 50 cents per 1,000 on others not specially provided for. And, what is of greater consequence, we want specific duty.

C. E. KENDEL,
Sec'y American Seed Trade Ass'n.

Should Seedsmen Guarantee Crops?

J. H. Bollinger seems to write in a reasonable manner, and I heartily agree with him, and always have done, that "like begets like." There is no question but what there are unscrupulous dealers in seeds as well as there are unscrupulous dealers in any commodity, that the public use, but I believe with L. H. Vaughan that the proportion of the thousands of orders filled by the American seedsmen that prove unsatisfactory to their customers shows a very small per cent, and I am positive that the American seed trade should have a great deal of credit for the almost wonderful improvements that have been made in various types of vegetable and flower seeds during the past few years.

The executive committee of the American Seed Trade Association held a meeting in New York January 22, and I am pleased to state that we proposed having a paper delivered at our convention, to be held at Clifton house, Niagara Falls, Ont., June 22-24 next, by a successful and practical market gardener on the topic, "The Quality in Seeds from a Market Gardener's Standpoint." We hope that our speaker will give us something of benefit to buyer and seller of seeds alike.

WATSON S. WOODRUFF,
President American Seed Trade Ass'n.

Another Warranty Case.

The present case does not refer to the seed trade but the sale of insecticides. The parties are E. P. Rand, market grower, Rayleigh, and Adam Parker & Co., Waltham Cross. Plaintiff's case as stated on Saturday at the Southend court was that he purchased 40 gallons of a disinfectant called Destructo which the salesman stated was the same as Clubicide and equally safe to use, but cheaper. The results, however, were rather disastrous, as when the sun came out after using on his cucumbers, the leaves collapsed and the crop was more or less of a failure. The court rose before the other side could be heard.—Horticultural Advertiser, January 20, 1909.

Imports.

During the week ending January 30 imports were received at New York as follows:

H. F. Darrow, 70 pkgs. plants, one case trees, 187 cases lily of the valley pips, 99 pkgs. two bags seed.

Vaughan's Seed Store, 84 pkgs. lily of the valley pips, four bags, four cases, one pkg. seed.

McHutchison & Co., 39 cases plants.

Brown Bros. & Co., 225 bags seed.

P. Henderson & Co., 12 bags, six pkgs. seed.

J. M. Thorburn & Co., four bags, three cases, one pkg. seed.

A. T. Boddington, 51 bbls. grass seed, three cases bulbs.

To others: 177 cases plants, seven pkgs. plants, 30 cases bulbs, 64 pkgs. lily of the valley pips, 1250 bags sunflower seed, 425 bags cloverseed, 1661 bags seed, 67 pkgs. seed.

European Horticulture.

FROM THE FRENCH TRADE PAPERS.

TO OBTAIN CACTUS DAHLIA SEED.—However unpromising a double cactus dahlia may appear, most varieties, according to M. A. Vigier, will be found to hold some petals which contain a perfect pistil, most, however, have the pistils atrophied or altogether wanting. Some flowers will also certainly be found to be complete, and from these pollen, or better still, the stamens with pollen adhering, may be carried to the fertile stigma. In clear and sunny weather the petal may be left undisturbed, but in case of moist or cloudy days it is best to cut away a large portion at once to leave the pistil quite free, and, as soon as it withers, in all cases remove the petal entirely to provide against decay. Seed may thus be obtained from a large proportion of double cactus sorts.

AMONG the season's novelties are two most desirable verbenas:—V. hybrida compacta lutescens, dwarf, with strong short branches and creamy yellow flowers, and V. hybrida pumila Meteor, eight inches high, very deep scarlet red in color and admirable for borders or dwarf masses.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

AN important report by A. C. Beal, of the Illinois Experiment Station, Urbana, on "Control of Thrips in Cucumber Houses," will be found on page — of this issue.

MENDON, MICH.—Beebe & Son have purchased 400 acres of land in Lake township for peppermint growing, to be added to the 300 acres already used by the firm for this purpose.

KALAMAZOO, MICH.—Articles of incorporation for the Kalamazoo Gardening Co., capitalized at $25,000, were filed at Lansing, January 25. The stockholders are Dr. Bunyan, W. Ostrander, Henry Van Haaften and Adam K. Grant.

Massachusetts Asparagus Growers' Ass'n.

The annual meeting of the Massachusetts Asparagus Growers' Association was held at the house of President C. W. Prescott, Concord, January 28, 1909. There was a good attendance. The president reported progress for the past year. An extremely interesting and instructive discussion took place concerning fertilization, breeding and general handling of asparagus.

Prof. J. B. Norton, representing the Bureau of Plant Industry of Washington, D. C., was at the meeting, and gave a most interesting talk upon the plan of breeding by which it is hoped to establish a rust resistant variety of asparagus. Prof. Norton's investigations of this subject during the past summer and fall shed much light upon the question, and encouraged the belief that success is more than a possibility. The following officers were elected:

C. W. Prescott, president.
Frank Wheeler, vice-president.
Thos. Hollis, secretary-treasurer.

Executive committee: C. W. Prescott, Frank Wheeler, Thos. Hollis, J. E. Howland, E. S. Corey, Wilford Wheeler.

[The above association was formed in January, 1906, with the stated idea of restoring the asparagus to immunity from the rust disease. The men composing the executive committee are practical growers, and the objects of the association are worthy of all encouragement. The annual dues of the society are only $1, the same being the initiation fee. ED.]

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points January 30 were as follows: Boston, cucumbers, $10 per box. Cincinnati, cucumbers, $1.50 to $1.75 per dozen; mushrooms, 30 cents to 35 cents per pound. New York, mushrooms, per pound, 35 cents to 50 cents; cucumbers per dozen, $1.25 to $2.50; lettuce per barrel, $2 to $3; tomatoes per pound, 20 cents to 30 cents; radishes per dozen bunches, 50 cents to 75 cents; asparagus per dozen bunches, $6 to $6.50; rhubarb per dozen, $1 to $1.25; grapes per pound (imported), 45 cents to 65 cents; muskmelons each, Egyptian, 75 cents. Chicago, cucumbers, $1.50 to $3 per dozen; lettuce, $3 to $5 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 30 to 40 cents per pound; radishes, 40 to 60 cents per dozen bunches; asparagus, $2.75 to $7 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.25 per pound; peppers, 40 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound, extra fancy, 14 cents.

Stokes' Bonny Best Early Tomato

Is a Wonder. It is MAKING GOOD wherever grown.

If you grow tomatoes for early market you should use it.
If you grow tomato plants as a side line (there's money in it), it will make you a reputation.
It is **very early.**
It is a fine bright scarlet.
It is just the right size and shape.
It is the finest all-around tomato ever introduced.
It holds its size clear to the end of the season better than any tomato I have ever seen.

Stokes' Bonny Best Early Tomato

IS A WINNER

Price, pkt. 10c; oz., 50c; ¼-lb., $1.75; lb., $6.00. Postpaid.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

FREDONIA, N. Y.—The wife of Louis Roesch committed suicide January 31 by shooting herself. She had been in poor health.

PRESIDENT TAFT is the name of a new rose, a cross between Gruss an Teplitz and Cramoisie Superieur, which Ottolander & Hooftmann, Holland, are sending out.

CONCORD, MASS.—Wilfrid Wheeler, proprietor of the Fairhaven greenhouses, gave a paper on "Small Fruit Growing" before members of the Worcester County Horticultural Society in Worcester, January 21.

FRENCH manetti stocks and other French nursery stock are being held up seriously at port of New York because of supposed danger from the brown-tailed moth. The Illinois authorities are also looking into this matter.

THE report of the annual meeting of the Western Association of Nurserymen, held at Coates house, Kansas City, Mo., December 15, 1908, contains much interesting matter including the proceedings of the association and several papers and addresses read on the occasion.

NURSERY STOCK is said to be very short in the northwest and local growers cannot nearly fill their orders in some varieties of fruit and other trees. Spring delivery will not begin for several weeks, but orders are coming in and nurserymen are buying stock from one another to fill them.

OROVILLE, WASH.—The headquarters for the Okanogan nurseries, formerly at Okanogan, have been moved here, and the owner, Jackson Evans, is arranging for the planting of his spring stock. From this place the nursery will enter into competition with other nurseries of the state, shipping by rail from this place.

A BILL giving the secretary of agriculture authority to regulate the importation and interstate transportation of nursery stock, including seed, was presented January 30 by Chairman Scott, of the house committee on agriculture. An appropriation of $100,000 is provided for the appointment of skilled inspectors. It is provided that there can be no entry of nursery stock without a certificate from an expert satisfactory to the secretary.

The Red Cedar.

There is a suggestive note in "Notes on Forest and Ornamental Trees," published by the Texas Experiment Station, respecting the planting of the red cedar: "Used for avenues the red cedar gives the effect of dreary monotony instead of pleasing uniformity. The same is also true when planted together in large groups unless the trees be restricted to certain forms and compactness by constant pruning or shearing." With the first part of this note we cordially agree. There are many trees beautiful in themselves that are not good for planting in lines. The red cedar is one of them. The Irish yew is another. The latter is a beautiful tree, yet how funereal it looks when planted in lines! But to say that any improvement in the matter can be made by restricting the trees to certain forms and compactness by "constant pruning or shearing" is a mischievous statement and only calculated to make a bad matter worse. There are several varieties of the juniper and some are stiffer and more set in habit than others, but how this can be improved by clipping into forms even more stiff, it is difficult to see.

Western New York Horticultural Society.

THE ROCHESTER MEETING.

With a magnificent display of fruits, vegetables, ornamental trees, shrubs, and nursery stock, and with more than 4,000 square feet of spraying devices on exhibition, the Western New York Horticultural Society opened its fifty-fourth annual meeting January 27 at 10:30 o'clock. President W. C. Barry rapped his gavel on the table promptly at the time scheduled for the business of the morning session to begin and more than 1,000 members were present when Mr. Barry made his opening address and welcomed the visiting members to Rochester, which has for 54 years been the favored meeting spot for the society.

W. C. Barry, Rochester, N. Y.
President Western New York Hort. Society.

From the enthusiasm shown it was conceded that this convention will be the most successful ever held in the history of the organization, for never before has it had so convenient a place for exhibition purposes as Convention hall. Beginning at 10:30 the fruit men were occupied with the appointments of committees and the reading of reports by Park Commissioner John Hall, who is the secretary and treasurer of the society. This was followed by an address by Professor F. C. Stewart, botanist of the New York State Experiment station on the subject of "Recent Investigations on Plant Diseases." "What is Soil Fertility" was described by Dr. L. Van Slyke, chemist from the State Experiment Station.

PRESIDENT BARRY'S ADDRESS.

President Barry in his address said in part: "Proper cultivation and fertilization of the soil, good crops, and forestry are subjects considered and discussed by the ablest men in the land today, and why? because of their close relation to the general welfare of the people. This work is exactly in line with the purposes of our association. From the date of its organization the membership has been striving to secure better results from the land, and while we have not accomplished all that we should, we can at least feel that our efforts have been fairly successful.

"Unfortunately, we have to be satisfied with moderate accomplishments. No business that I am acquainted with has so many attractive features connected with it as fruit culture. If we value it as we should, devote our best energy to it, aim to grow the best and to be satisfied with nothing else, and work intelligently, failure will be almost impossible. We should possess a good library of horticultural, agricultural and pomological works, subscribe for horticultural and agricultural journals, keep in touch with the experiment stations, and become members of horticultural and kindred associations." After his address Mr. Barry appointed the following committees:

Business—Samuel Fraser, Genesco; C. G. Hooker, Rochester; D. D. Stone, Oswego.
Resolutions—Professor U. P. Hedrick, Geneva, and John Craig, Ithaca.
Finance—C. S. Wilson, Ithaca; Y. I. Smith, Hilton.
Fruit exhibits—Professor S. A. Beach, Ames, Ia.; I. H. Dewey, Rochester.
Nominations—C. M. Hooker, Rochester; E. W. Catchpole, North Rose; J. S. Woodward, Lockport; Clark Allis, Medina; J. Corwin Jack, Batavia.

The report of the secretary-treasurer showed the growth of the society. The receipts during the year were $2,000, of which more than $1,000 came from membership fees. F. E. Rupert, as chairman, reported on the exhibit made by the society at the state fair. The society was awarded a second prize of $250; 1,400 plates of apples, including 206 varieties, were shown; 138 varieties of pears, 43 varieties of plums, 15 of peaches, 108 of grapes, eight of nuts and three of quinces. The $250 prize was turned into the treasury of the society.

The second day's sessions were equally well attended. J. H. Hale, of the Connecticut Pomological Society, gave an impromptu address full of practical suggestions to fruit growers. He insisted that there was as much lack of business methods in packing and marketing fruit as there was lack of care in growing, and he pointed out that no success could be complete unless the one supplemented the other, for the interests could not be separated.

Secretary Hall offered a resolution, which was unanimously adopted, approving the plan of the Mayor for an addition to Convention hall. In commenting on this resolution Secretary Hall took occasion to say that he had been forced, because of the lack of room, to refuse space to eight or ten manufacturers who desired to make exhibits.

Resolutions were adopted approving the bill introduced in congress to regulate the grading and sale of fungicides and insecticides, approving national and state pure-food legislation forbidding the use of injurious preservatives in food products, as it has a far reaching influence on the fruit industry, and approving the efforts, state and national, to conserve the natural resources. The following officers were elected for the coming year.

W. C. Barry, president.
John Hall, secretary-treasurer.
S. D. Willard, Geneva, J. S. Woodward, Lockport, S. W. Wadhams, Clarkson and Albert Wood, Carlton Station, vice presidents.

Nashville.

The State Horticultural Society and the State Nursery Association, held important meetings here January 26-27, being the fourth annual joint assembly. President R. A. Wilkie, of Culleoka, presided over the sessions of the Horticultural Society, and F. G. McCord, of this city, presided in the nurserymen's sessions. Interesting reports were made, and excellent papers, bearing upon the horticultural and nursery interests of the state, were read by practical workers. A state tree planting day was advocated, and a resolution was passed endorsing the efforts of Hon. John Thompson, commissioner of agriculture, asking the legislature, now in session, to appropriate $5,000 to aid the fight that the state board of entomology is making against insects and fungi that prey on fruit.

This state stands high as a nursery state, having over $10,000,000 invested in nurseries and orchards. A practical demonstration of the use of a power-spraying machine was given on Polk avenue, fronting the hall in which the convention was held. The following resolutions were also adopted:

"Resolved, That our senators and representatives now in congress be urged to assist in the passage of the house of representatives bill No. 21,318, and senate bill No. 6,575, for preventing the manufacture, sale and transportation of adulterated or unbranded Paris green, lead arsenates and other insecticides and fungicides, and for regulating traffic therein. Also,

"Resolved, That in view of the increasing danger to the horticultural interests of the state from the introduction and spread of the San Jose scale, and other destructive scale and fungus diseases, that our state legislature is hereby urgently requested to increase the appropriation for the Department of Agriculture to the extent that the board of entomology may have an appropriation of $5,000 instead of $2,000, as at present, and also make provision for the inspection of orchards and nurseries of the state, and the proper enforcement of laws pertaining thereto."

A special exhibit of apples was made by Stark Bros., one of the leading apple growing firms of the United States. For the Nurserymen's Association, the following officers were elected:

J. C. Hale, Winchester, president.

Willis Hastings, Mansfield, vice-president for west Tennessee.

W. Y. C. Grant, Columbia, vice-president for middle Tennessee.

A. J. Smith, Knoxville, vice-president for east Tennessee.

S. M. Bentley, Knoxville, secretary and treasurer.

For the horticultural society the following officers were elected:

W. P. Wade, Humboldt, president.

J. A. Fletcher, Cleveland, vice-president for east Tennessee.

Percy Brown, Spring Hill, vice-president for middle Tennessee.

Otto Henninger, Memphis, vice-president for west Tennessee.

Prof. C. A. Keffer, Knoxville, secretary and treasurer.

There is a growing interest, both in the horticultural and nurserymen's associations and great good will no doubt come from their annual gatherings.

THE TAFT ROSE

A Summer Blooming Rose Similar in Growth and Habit to K. A. Victoria.

Color: A Beautiful Rose Salmon. Substance: Has from 55 to 60 Petals. It is a strong, vigorous grower, and we can conscientiously recommend it as a garden rose; tried the same in fifteen different private gardens about Cincinnati the past summer, hearing nothing but the highest praise from all who tried it.

The stock of this beautiful rose is limited, and all growers desirous of having any plants we would kindly ask to send in their orders as soon as possible.

Ready by March 1st, at $15.00 per 100.

Form Versus Variety.

If there is any botanist, living or dead, who has made a clear distinction between the words "form" and "variety" as applied to plants, we wish someone would rise up and point him out. So far as our own efforts go, we fail to find much difference in the two except that the word variety is the more general term and may mean anything in plants less than a species. The use of the word form, to designate trivial forms of plants, due to variations in the soil, moisture, light, etc., in the plants' habitat has but recently come into general use, being first taken up extensively by the Fern Bulletin. Previous to that time variations in the species were usually known as varieties. To change the name of a plant from form to variety or the reverse, would seem a mere change of terms not affecting the status of the plant form in any way. This being the case, it is surprising that a prominent botanist should seize upon such a slight pretext to get his own name into print. This, however, has been done in a prominent eastern publication where Rhus glabra variety laciniata Carr., has been changed to Rhus glabra forma laciniata (Carr.) as a new combination in the full expectation, doubtless, that future generations will write the name of the aforesaid eminent botanist after the parenthesis. For ourselves, we are disinclined to accord him so dubious an honor.—American Botanist.

Buffalo.

BUSINESS VERY GOOD.

The past week has been more like April than January, but Friday was the forerunner of a change which has developed into a genuine winter with almost zero weather. Stock has been quite plentiful, excepting carnations, which are just off crop. Business has been very good, with a small amount of funeral work until Saturday and Sunday, when the deaths of two prominent business men gave all a busy time. McKinley's birthday was the banner year for carnations, the retailers never selling more than on this year. It was probably due to the fact that the union rescue mission, somewhat similar to the Salvation army, conceived the idea of having young ladies in all large stores, hotels, office buildings, depots and on street corners, and in that way sold something like 25,000 flowers at prices from $10 down to 10 cents. The sale on the streets and other places stimulated the store sales, altogether making one of the best days that we have had since McKinley day was established.

NOTES.

John L. Brothers, superintendent of the city parks, was stricken with paralysis about two weeks ago, and, owing to his age, fears are entertained for his recovery. David Seymour, auditor of the board of park commissioners, is acting superintendent.

The tablet in the City hall was decorated with a large carnation wreath on McKinley's birthday, furnished by the Spanish war veterans. The McKinley monument had a very large laurel wreath with cycas, as last year.

At the important meeting of the Florists' Club on Tuesday evening action will be taken in regard to the coming meeting of the American Rose Society.

The Ever Ready Pot Cover Co. are very busy with advance orders for Easter and so far are away ahead of last year.

WANOKA GREENHOUSES, Barneveld, N. Y

Spokane, Wash.

The second annual national apple show will be held in this city this year. This was definitely decided January 28 at a joint meeting of committees representing the chamber of commerce, the National Apple Show and the national irrigation congress. The national irrigation congress will convene here August 9-14.

Committees from the above bodies met and appointed a committee to formulate a plan whereby funds can be raised. The great success of the first National Apple Show, which was held in December, 1908, and the insistent demands of residents of the inland empire that it be repeated, were instrumental in bringing the committee to its decision. The show will be on a grander and larger scale than the first.

Georgia, white (Cockcroft),
Mrs. J. C. Vaughan, white (Rudd),
Bay State, variegated (Roper),
Pink Delight (Dorner),
Wanoka, crimson (Wanoka Greenhouses).
Apple Blossom, white, light pink markings (Wanoka Greenhouses),

$12.00 per 100; $100.00 per 1000.

O. P. Bassett, scarlet (Bassett & Washburn), **$8 00 per 100; $60.00 per 1000.**

The two novelties. Mrs. Chas. Knopf and Ruby, give great promise as commercial varieties; both are free producers. We have them both growing side by side with the standard sorts, and they have demonstrated now that they are here to stay. Mrs. Chas. Knopf is at this time especially good, being larger and of better form and color than Enchantress. Ruby is a very large, perfectly formed flower with excellent stem, and it has a good crimson shade, not too dark.

STANDARD VARIETIES

ELI CROSS, 25 Monroe St., Grand Rapids, Mich.

NEW BRITAIN, CONN.—Edward T. Elton, Jr., who has been seriously ill for some time with heart trouble, died January 28 at his home on Berlin street. He is survived by his wife, two small children, and his aged father. Up to the time of his sickness Mr. Elton had been employed by A. A. Weldon, the greenhouse man, and has always been found a reliable worker. Less than two months ago the family moved from the old Elton farm to their new home near Woodruff's store. He was 42 years of age.

Rooted Carnation Cuttings

Viola Sinclair sent out on trial in limited quantities by H. W. Field, Northampton, Mass., has proved to be an acquisition for the average grower. It is early, extremely free, resembles Mrs. T. W. Lawson in color, and a continous bloomer. Worthy of trial by all.

PETER FISHER, CARNATION SPECIALIST. **Ellis, Mass.**

New White Carnation GEORGIA The Best White

Best for **Quality.** **Come and See It.** Best for **Quantity.**

This variety is bound to supplant other whites as it not only produces as many or more flowers but every one of them comes with a perfect calyx borne on a long stiff stem, supporting the bloom in perfect shape. This fact makes it greatly superior to other varieties as a money maker. We have 20,000 cuttings in the sand for Jan. delivery. **Rooted Cuttings: $2.00 per doz.; $12.00 per 100; $100.00 per 1000 Satisfaction guaranteed.** See classified "ad" for price list of Standard Varieties.

J. D. COCKCROFT, Northport, Long Island, N. Y.

New Carnation Edward.

This new seedling Carnation is a wonder for producing flowers, full of business from start to finish, continuous throughout the season, cannot be beat for productiveness, easily grown and propagated. **Description:** Deep pink in color, very large and well built up in center with good stem and calyx. Comes into bloom early and keeps at it with wonderful results. **$12.00 per 100; $100.00 per 100.** Will be heard from with others in the future.

W. H. SHUMWAY, Berlin, Conn.

S. D. BRANT, Clay Center, Kan.

MONTCLAIR, N. J.—Fire was discovered early January 29 in the greenhouses of A. S. Wallace, 29 North Fullerton avenue. When the firemen arrived the packing-room of the plant was in flames. In order to save the glass in the establishment, water was not turned on, but, instead, the chemical engine was used and the fire eventually got under control. The loss to the building is about $150 but the loss of the plants could not be estimated, as the gas pipes were pulled apart and the leaking gas and smoke from the burning building likely caused a large damage. The fire was caused by an overheated flue near the boilers. Mr. Wallace spoke highly of the good judgment of the fire department in not turning on streams of water.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.
Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At Louisville.

The Florists' bowling club met Monday night and had a very good time, Capt. Walker's team defeating Capt. Fred L. Schulz's three straights. Following are the scores:

	1st.	2nd.	3rd.
Fred L. Schulz	100	136	151
James Doerr	134	116	140
Andy Brand	93	147	135
Jacob Schulz	117	110	121
Louis Kirch	95	124	116
	101	101	101
Total	640	734	764
Wm. G. Walker	138	150	138
Geo. E. Schulz	152	117	168
Jos. Wettle	123	145	137
Geo. Stark	145	115	110
Robt. Miller	122	119	160
Karl Rabe	84	125	96
Total	764	771	809

Geo. E. Schulz was high with 168 and Karl Rabe was low with 84. F. L. S.

At Washington.

In the big bowling tournament, the florists' team stands third in Class B having succeeded in making 2,568 pins. In Class A the Agricultural team made 2,275. Shaffer and Hamner succeeded in capturing second prize in the doubles. The Baltimore, Philadelphia and Washington captains are arranging a Tri-city game, the first series of which is to be played at Baltimore. G. S.

Scollay's Plant Sprinklers

FOR CUT FLOWER TRADE, Also the

Scollay Putty Bulb

FOR GLAZING GREENHOUSES, Etc.

The Scollay Plant Sprinkler is in its 35th year. Thirty-five years of experience should count for something—we have given attention to quality in every respect—making of seams—selection of high-grade rubber. During these 35 years there have appeared more than 35 imitations, all the way from hand levers—tee ends—breakable tops down to Chinese and Boston Blowers—and, after all, the fact remains the same, that we are still the real thing in rubber sprinklers, etc. No one is so new or old in the cut flower trade that he can keep shop without **Scollay's Rubber Plant Sprinklers.** Every sprinkler guaranteed free from imperfection in manufacture.

For Sale by All Prominent Seedsmen.

JOHN A. SCOLLAY, 74-76 Myrtle Ave., **Brooklyn, N. Y.**

Pittsburg.

GOOD DEMAND ON MCKINLEY DAY.

The past week can be classed as carnation week in this city. Last year McKinley day did not cut much of a figure, but a surprising demand sprung up this year for carnations and soon cleaned up the market. The other carnation day here was on January 30, known as Firemen's day, when white carnations were worn, and the demand caused a general clean-up. About the only drug there is at present is violets; when one can buy specials on the street, 100 in a bunch for 25 cents, "enough said." Lilies are again in good supply. Lily of the valley and gardenias have been moving slowly, while quite a demand for cattleyas is noticed. Bulb stock is not very plentiful yet, and what comes in sells nicely. Greens are quite scarce.

NOTES.

One of our out-of-town florists sold a party $18 worth of funeral designs some months ago on credit, and the account was considered a dead one. The florist in passing the cemetery thought he might at least have his wire frames back, and took them along home. The next day he was charged with stealing the frames, but was informed that by giving the party who bought the flowers a receipt in full and paying costs he would be let off, which he did.

Those who attended the American Carnation Society Convention at Indianapolis have returned, all saying they had a delightful time. Everyone is pleased to hear the 1910 convention is to be held in this city.

On the night of January 24 some one maliciously opened the ventilators of one of the carnation houses of F. H. Westhoff, Allison Park, but it was discovered in time to prevent much damage.

M. Patton, proprietor of the Valley Greenhouse Co., Sewickley, has just returned from a two months' trip, looking up machinery for an ice plant which he intends to erect.

The Huscroft boys, Steubenville, O., have the sympathy of all the trade between here and Columbus in the death of their mother, which occurred January 29 from grip.

Linn & Sons have bought the greenhouses of T. J. Allen, Lock No. 4, and will conduct a retail business there in the future.

The South View Floral Co. has moved across the street to the building formerly occupied by M. F. Stafford.

Ernest Fisher and family intend leaving for California, where they will make their home, February 18.

Maryville, Mo.

The prospects are for a large spring trade here in all lines, and January sales have been better than for December, as there was something doing every day despite the cold weather.

The severe storm which swept this section of the country January 28 and 29, blowing from 50 to 60 miles an hour and even more at other points of the state, resulted in some severe losses to those in the trade, but Alfred Engelmann reports a damage of only about $1.50 by the breaking of a dozen panes of glass out of the 10,000 feet of glass composing his establishment.

P. Mergen lost more heavily, as the plate glass was broken in his store front and five rows of glass taken out of the center of his rose house, the wind breaking in the north side and going right through the south side of the house, putting it out of commission. E.

HUMBOLDT, TENN.—T. W. Rogers has acquired an interest in the Humboldt Nursery Co.

Montreal.

The annual dinner of the Gardeners' and Florists' Club held at the Strathcona café, St. Catherine street, was a great success. About 50 members sat down to do justice to a very good bill of fare. The speeches were able and to the point. The first toast, "The King," was cheerfully joined in by all present. The toast, "Our Country," was responded to by Professor Blair, of the MacDonald College, St. Anne de Bellevue. Mr. Blair dwelt at great length on the immensity of our country, especially the west, with its undeveloped resources, and assured his audience that before many years the west would be as great a fruit growing country as Ontario is now. Varieties of apples have been developed that are perfectly hardy out there, and are being continually improved on. Speaking on our profession the professor said a great mistake is made by the majority of us to do just so much and no more; let us do all we can and put all the dignity we possess into it and elevate it to the level above common labor.

To the toast "Sister Societies" Geo. Trussel responded on behalf of the Montreal Horticultural Society. Mr. Trussel said that the society might have done more work in the past than at present, but a lot of good work had been done in the 29 years he had been a member, and he hoped the society would never cease.

John Walsh spoke for the Canadian Horticultural Society, which had done good work at its conventions in the past, but promised greater things still at the coming ones, especially when we meet in this city in 1910. He urged that a strong delegation be sent to Cincinnati to represent this city and procure the meeting for us. Harry Laing had some nice things to say of the Royal Horticultural Society of England, of which he is a member.

The Society of American Florists was represented by S. Wertheimer, of New York. The speaker said that he had no doubt that the S. A. F. would meet in Montreal if a strong delegation went to Cincinnati, whereupon several signified their intention of going. James Kean was presented with the certificate of merit awarded at the January meeting for a vase of White Perfection carnation.

A. C. Wilshire responded to the toast of "The Florists." He said that there is more money made, more flowers sold, better prices obtained than before; there are more stores and some of them as good as those in Boston and New York. There was only one thing the florists had to complain of; that was the need of a really good wholesale (commission) florist. R. W. Whiting spoke for the private gardener. A. Ferguson spoke for the seedsmen. Songs were rendered by Messrs. Clark, Walker, Langford, Pidduck and Patten. LUCK.

MENOMINEE, MICH.—Chas. Schultz has purchased the property situated on the corner of State street and Dunlap avenue and formerly the site of the old Globe hotel. He intends to build a large addition to his greenhouse on the newly acquired property, and will also build an office on the corner. The addition will be made thoroughly modern in every respect, with the latest improved heating and ventilating systems and the building of it will begin early in the spring. Mr. Schultz has been contemplating the enlarging of his houses for some time, and when the construction is completed he will have one of the finest greenhouses in the upper peninsula.

The Chicago House Wrecking Co.
35th and Iron Sts. Chicago.

Hot Water Heating.

ED. AMERICAN FLORIST:—

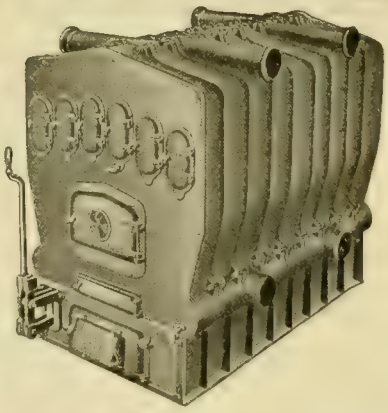
I can buy a large hot water heater and a quantity of pipe at a price that probably gives me the heater free, though it has only been in use three years and is in good condition. I have two greenhouses, 16x75 feet, 30 feet from my dwelling house. Would it be advisable to put the heater under the dwelling house and what size flow and return would be needed? How many runs of 2-inch pipe would be necessary to heat the greenhouses to 60° when the temperature outside is 20° below zero? My intention is to heat the dwelling also.

Kansas. E. H. M.

There would be no particular objection to placing the boiler in the cellar of the dwelling, if the top of the boiler will stand at least three feet below the lowest part of the returns in the greenhouse. The main heating pipes leading to the greenhouse can be run through a trench made of cement about two feet wide and one foot deep inside. Then wrap the pipes in asbestos pipe covering. For the flow and return 4-inch pipes should be used. To maintain a temperature of 60° use twelve 2-inch pipes in each house, at least four of which should be flows.

L. R. T.

MISHAWAKA, IND.—J. L. Carney has been much annoyed by impostors who are peddling flower roots and bulbs from house to house in South Bend and other nearby cities saying they came from his place.



What We Know On Heating

WE were heating engineers many years before we were greenhouse builders, which means no concern has had as long or an equal heating experience. This experience of ours will save you troubles — and money.

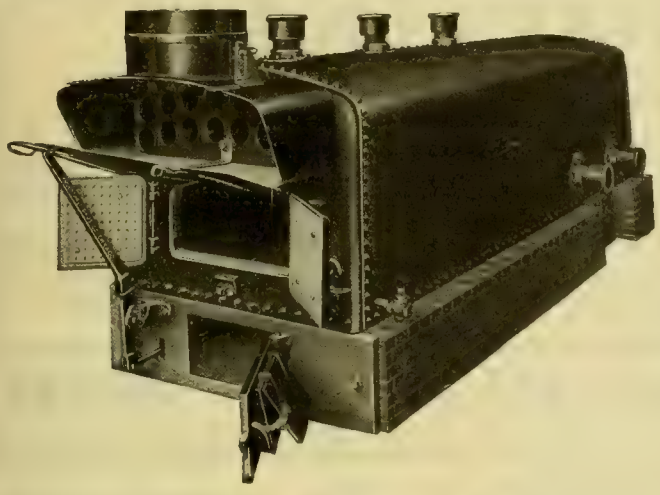
Write us.

Hitchings & Company
1170 Broadway New York

For Best Results Advertisers should mail new advertisments and changes so as to reach us on Monday.

Kroeschell Boilers

Now is the Time to Place Your Order



Made in 15 sizes. Heats from smallest houses up to 50,000 feet of glass. Will maintain 60 degrees at 15 below zero outside.

The new house which I have just completed, 43 feet wide by 265 feet long, and **piped according to your instructions**, does not vary more than two degrees all over the house at any time, and I consider that remarkable for so large a house.

The Generator purchased from you some time since and which is installed in connection with this system, is giving excellent satisfaction. It not only adds to the capacity of the boiler on account of the increased velocity of hot water circulation, and consequently requiring less piping, but also seems to maintain a steadier and more even temperature all over the house

Another **advantage of this system of heating** is that where roses are grown, sulphur applied to the pipes for **checking mildew** is much more effective. STEPHEN MORTENSON,
Jan., 1909. Southampton, Pa.

The results produced by the Kroeschell Generator are a very great surprise, and are a complete cure of all my former heating troubles.

My tank is only two feet above highest point of piping, so that as soon as the water became hot, the tank would overflow and flood my work room: no more of that now.

With the Generator I can keep low temperature or can get the **pipes so hot that we cannot touch them.** In less than twenty minutes all houses are thoroughly and equally heated, no matter how many coils are turned on, and all this is due to the Generator, which costs only $35.

I feel that no hot water system should be without the Kroeschell Generator. RUDOLPH NAGEL.

P. S.—For **boiler and piping** system I can say **"Perfect in every way."** R. N.,
Nov. 17, 1908. Lancaster, Pa.

Can ship any size at once.

Telegraph us if you need one in a hurry.

They are supplied with our special openings which are arranged for either cast iron or threaded pipe.

Received your inquiry of the 9th inst. in regard to the Generator purchased from you.

We can safely say that without your Generator it would be almost impossible to heat our houses with any degree of safety, as our expansion tank is but 18 inches above the highest pipe line, and we had **no trouble whatever** in keeping the required temperature during the recent cold spell, with thermometer **at 12 degrees below zero.**

We are glad of the opportunity to recommend your **Generator, Boiler and piping plans** to our fellow florists, knowing that when placed as directed they will give perfect satisfaction.

We did our own piping, and none of us had ever had any experience in that line before.

Hoping this will be of some benefit to you, and thanking you for past kindnesses, we remain,
NORTH FLORAL CO.,
Dec. 11, '08. Fort Dodge, Iowa.

In 1894 we bought one of your No. 12 boilers to take the place of four smaller boilers of another make. Your boiler has done the entire work to the highest satisfaction saving labor and about one-third of the fuel we used to burn before. We had that boiler up to 1906, that is 12 years, having no repairs on it whatever, except one set of flues we put in in 1900. Last fall we installed one of your No. 14 boilers having enlarged our plant. It takes care of 35,000 square feet of glass very easy. When firing we kept the ash doors open only about one inch. We think your No. 14 boiler could carry 40,000 feet of glass. DAMM BROS., Chicago, Ill.

KROESCHELL BROS. CO., 45 Erie St, Chicago

Omaha.

EFFECT OF THE BLIZZARD.

We experienced one of the most disastrous blizzards we ever had Thursday night, and this lasted for 30 hours. In the afternoon it was cloudy and warm, but turned cold and windy, and by 7 o'clock we had the most furious blizzard we ever witnessed, which did a lot of damage to the florists. At Hess & Swoboda's it almost ruined one house of American Beauty roses, 24x200 feet, one house of carnations 24x200 feet, and one house of violets 200 feet long was frozen. It was hard to keep the rest of the houses above 40°. All report lots of glass broken and ventilation blown out, etc. It is still very cold, with a sharp brisk wind. Business has been good right along, and stock is good. Roses are somewhat scarce; carnations are good and plentiful; bulbous stock is coming in more plentiful, and helps out immensely.

NOTES.

The Florists' Club held its monthly meeting recently, and was favored with the presence of A. Henderson, of Vaughan's Seed Store, and D. W. McAllister Currie, Milwaukee. The club considered a flower show next autumn, and it may materialize, provided we can raise the money.

Paul B. Floth has been very ill for the last two weeks, and is slowly recovering.

Visitors: J. M. Garland, Desplaines, Ill.; A. Ringier, Chicago; W. Hageman, New York; F. Farney, of Randall & Co., Chicago, and W. Wrigley, of Augsburger & Son. GRIPPE.

Brass Boiler Flues.

ED. AMERICAN FLORIST:—

In 1890 I bought an Acme water heater of the manufacturer. This had 12 brass flues which are leaking now and I need new ones. I have tried to find the parties who could supply them but have been unable to do so. Perhaps you can advise me. It seems the manufacturer is dead and the patent and patterns have been sold to others, but I have been unable to locate them. G. S.

I have no knowledge of the Acme boiler or the present owners of the patterns, but if the brass tubes only require renewing, it should not be difficult to obtain brass piping which could be used for the purpose and almost any good boiler maker should be able to replace the flues. L. R. T.

PLEASANT HILL, MO.—The George M. Kellogg Flower and Plant Co. is cutting a remarkably fine lot of carnations. The daily cut averages 4,000 but on a recent day 6,675 were cut.

Bench Arrangement.

ED. AMERICAN FLORIST:—

Please advise me through the columns of your paper the best arrangement of beds or benches and walks in a greenhouse 35 feet wide. Also what style of roof would you suggest for a building of that width. J. W. S.

A house of the width mentioned should have five beds, of a width of five feet and the walks should average 20 inches. The walks along the walls could be a little less and two of the others slightly more than this width. This would answer for any purpose although for growing lettuce, it would be as well to have beds on the surface, while slightly raised beds with cement sides could be used for such crops as roses, carnations and violets. L. R. T.

HOMESTEAD, PA.—Wm. D. Faulk of Pittsburg, has purchased the business of D. Geddis at 210 Eighth avenue, and will give it his personal attention. Mr. Faulk has practically spent his lifetime in the florist business, for years conducting a stand in the Allegheny market house, and at present has a father and two brothers engaged in the floral business. He has retained the service of Edward Harvey, who was associated in the business with Mr. Geddis.

Cincinnati.

TRADE POOR.

The month just past has been the worst January, from a business standpoint, in a decade, for we always look forward to this month as being a good one for our business. Of course, we hear of exceptions, some who will say that they are busy, but these are few and far between; the majority complaining, and one of our most truthful and optimistic retailers remarked the other day that were it not for a little funeral work he might as well close the doors, as there is practically nothing doing in society. The weather was very much against business, as spring-like conditions prevailed, but on January 30 a blizzard struck the town and the mercury went down to the neighborhood of the bulb and stayed there for a few days. This, together with a high wind, naturally played havoc with the coal pile. However, with all these conditions confronting us, all is good cheer, optimism and hope, and everybody is looking for things to brighten up in the near future. The supply of cut flowers is equal to the demand, there being very few orders that had to be turned down. Roses of all kinds are in good supply, and at times there is a surplus of carnations, Roman hyacinths, Paper White narcissus, callas, daffodils and lily of the valley are equal to the demand, while violets, especially the eastern doubles, are a glut and on two or three occasions the past week it would have been an easy matter to fill an order for 50,000. There is a good call for green goods of all kinds, with enough for all orders.

NOTES.

On Saturday, February 13, the regular monthly meeting of the Florists' Society will take place in the salesrooms of Weiland & Olinger, 128 East Third street. Our meetings of late have been well attended, and the officers of the society are naturally very much pleased and grateful to the members for taking the interest they do in the discussions that arise. At the next meeting the different committees appointed by the ex-committee of the society to take charge of S. A. F. matters, will be ratified by the Florists' Society, and then every member will know his job and have to get busy. After the meeting we will have lunch and refreshments.

About eighteen of the craft from this city took in the meeting and exhibition of the American Carnation Society at Indianapolis last week, and came home praising the Hoosier boys' hospitality.

S.

New Castle, Ind.

A great many of the carnation conventionites visited this city on their return journey, calling at the various establishments. Unfortunately stock was mostly off crop, but the plants were found to be in unusually good condition, promising abundant bloom later on. Heller Bros. will grow only American Beauty roses for cut flowers next season, discarding all other varieties. Carnation growing will also be discontinued altogether. This firm now has a large mail order trade in roses of all kinds.

Weiland & Olinger are cutting some unusually good Bride and Bridesmaid roses this season, and they grow a great variety of roses, carnations and miscellaneous stock for their Cincinnati wholesale house. Mr. Weiland is so well pleased with the behavior of Rhea Reid during the past season that he will give it more space next year.

Wm. Dittmann has cut some of the best American Beauty shipped from this place during the present season. The plants gave a heavy yield throughout the fall and holidays and there is every indication that they will afford an excellent cut for late winter and early spring months. The plants are in fine shape.

The Benthey-Coatsworth Co. has had much success with Killarney this season and continues to cut a large quantity of this variety in fine condition.

Mrs. Wm. Dittmann expects to go to Germany next summer for a few months' vacation. Mr. Dittmann is in Florida at present seeking rest and recreation.

Herbert Heller is confined to his home by illness and it is feared he will have to go to Cincinnati shortly to undergo an operation.

Nashville.

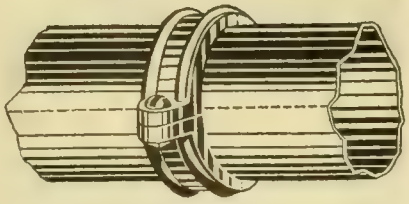
Trade has been only fair for a week or so past, but some excellent stock is coming in.

Geny Bros. are cutting in large quantities handsome Enchantress carnations, very large and of fine color and shape. They have also an abundance of violets. The inauguration and after-reception at the gubernatorial mansion of Governor Malcolm R. Patterson called for a liberal use of pot plants, southern smilax and flowers.

A full report of the joint meeting of the State Horticultural Society and the State Nurserymen's Association will be found in the nursery trade columns in this issue.

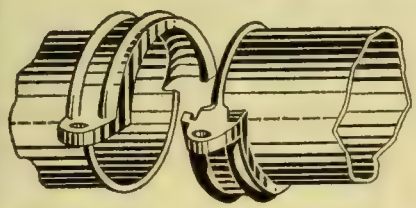
M. C. D.

Stuttle's Patent Pipe Clamp



Especially adapted for joining old boiler tubes now so generally used in hot-water heating of greenhouses. Also it is invaluable for utilizing old cast-iron pipes which otherwise would be consigned to junk pile.

Easy to put on in any position and even more easily removed.
Cheap as the cheapest joint in use and 100 per cent superior.



HENRY STUTTLE,

Inventor and Patentee.

BATAVIA, - ILL.

Glen Cove, N. Y.

The Nassau County Horticultural Society held its fourth annual dinner at the Oriental hotel, January 27. President Everett presided over a well attended dinner, about 40 members being present. Many guests also traveled from afar and were cordially welcomed by the president on behalf of the society. After an excellent dinner had been done justice to, a most enjoyable evening was spent with song, dance and story. Toastmaster Shaw called upon the president to present H. F. Meyer, winner of the largest aggregate of points for the year 1908, with a beautiful silver cup, given by Rickards Bros. of New York.

Ex-President Jaenicke and ex-Secretary Kisson were presented by the society with a pearl and diamond pin and fountain pen, respectively, as a recognition of services faithfully performed. An interesting talk on "Society Organization" was given by M. Maynard. The Rickards brothers, C. Russel and W. Armstrong added much to the enjoyment of the evening by singing many popular songs. The Scottish bloom was stirred by R. Angus' beautiful rendering of old Scottish airs on the violin. A. Wilson, of Summit, N. J., also did his part towards the entertainment of an appreciative audience, and one of the most successful dinners ever held by the society was brought to a close by singing Auld Lang Syne.

WM. H. MACKENZIE, Sec'y.

Newark, N. J.

BUSINESS POOR.

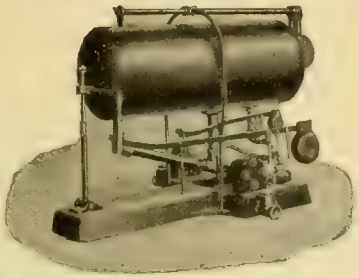
The month of January is not very brisk as a rule, but we cannot remember the month being so poor in a good many years. Of course there is a certain number of weddings, entertainments and balls, but these were few. To make matters worse, the weather was very bad. There is very little stock coming into the market, and if business should come back to its normal conditions we might predict very good prices. Carnations and roses are coming in fair in supply, prices ranging from three to six cents. Roses are higher, four to eight cents in a good many cases. There are some tulips coming in with little demand. Paper White narcissus is not plentiful, and moves well at 20 and 25 cents per dozen. Richmond roses are scarce, bringing 12 to 15 cents.

NOTES.

E. W. Fengar, proprietor of the Linden Avenue greenhouses, has just returned from a trip to Chicago, where he went to look over some of the large greenhouse plants. He speaks very highly of both the construction of houses out west and the fine systems they have in conducting a large establishment. Mr. Fengar has, without a doubt, one of the finest carnation ranges in this part of the country. He intends to double its capacity with the coming year.

The booming of South Broad street seems to help our down-town retailers. It presented a very beautiful sight last Saturday, all lit up; we understand it will cost the merchants about $500,000 a year for this display. Wolfingers looked extra fine, decorated with choice cut flowers and bunting.

"DETROIT" RETURN TRAPS



"Detroit" Return Trap. (Patented)

Will keep any Steam heating system free from water, making every foot hot and efficient, returning automatically all water of condensation directly into the boiler—**hot**—and without a pump.

Louisiana Red Cypress

As described by Bassett & Washburn, Chicago.

"Replying to your favor requesting our experience with Pecky Cypress we will say we have been using this grade of Cypress in our greenhouses and plant benches for the last ten or twelve years and so far have not found any of this wood that has all rotted out. We formerly used Hemlock and Pine, but found that two-inch stock only lasted about four years, while so far we have had no Pecky Cypress rot out in ten or twelve years. We use clear Cypress for all our roof work, ventilators, etc., and it is very satisfactory. We think it is the only kind of lumber for the purpose."

IT IS THE MOST DURABLE WOOD KNOWN. Ask about it at your local lumber yard or write

LOUISIANA RED CYPRESS CO. HIBERNIA BUILDING, **New Orleans, La.**

Society for Horticultural Science.

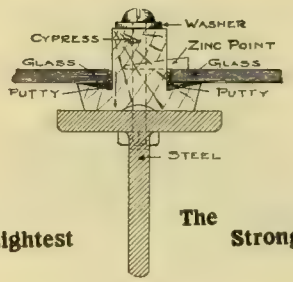
At its business meeting on December 31, 1908, the above society voted to sell copies of the reports already published to new members and to educational institutions for $1 per copy, and $2 per copy to non-members of the society. The question of affiliation with the National Association for the Advancement of Agricultural Science was discussed, and although the sentiment was in favor of such affiliation, the matter was referred to the executive committee for consideration, and to be reported on at the next meeting. The committee appointed at the Jamestown meeting to interview the secretary of agriculture with respect to having the reports of the society printed as a bulletin of the Department of Agriculture, reported that the matter had been discussed with Dr. B. T. Galloway, who represented the secretary of agriculture, and it was determined that, with certain changes in the constitution of the society, there would undoubtedly be no opposition at all to the secretary of agriculture consenting to have the reports published by the department. The proposed changes in the constitution are as follows:

That the association shall be known as the American Association of Official Horticulturists, the object of which is to promote the science of horticulture, and that any person connected with a state or federal experiment station, or with the Department of Agriculture, or its territorial stations, or with any other institution in the United States or Canada, who is engaged in the teaching of horticulture, or in experiments bearing upon it, may become a member of the association and shall be entitled to vote on the conditions which are embodied in the present constitution. Furthermore, that all horticulturists in the United States, and in Canada, or in any other country, engaged in the teaching or investigation of horticulture, may become associate members of the association under the same conditions that govern the admission of members, and shall have all the privileges of members except the right to vote and hold office. These amendments to the constitution were discussed and laid upon the table, because, according to the by-laws, they could not be acted upon until the next regular business meeting. The officers and members of the committees for 1908 were re-elected for 1909.

Worcester, Mass.

Business has held up wonderfully since the holidays, and while there is no great scarcity of stock, everything is cleaned up daily. Bulbous stock is coming in now, White tulips still have a forced appearance. Fine Golden Spur and Double Von Sion narcissi are in. Flowering plants are selling well, azaleas, rhododendrons, cyclamens and primulas being very popular.

The Payne Steel "T" Bar Greenhouses



The Lightest The Strongest

Half full Size.

HOUSES of this type constructed with both curved glass eaves and straight glass eaves. Least amount of shadow. Least amount of wood. No drip. Greatest durability.

JOHN A. PAYNE,
Greenhouse Designer and Builder,
260-274 Culver Avenue,
JERSEY CITY, N. J.

NOTES.

The Worcester County Horticultural Society held a well attended meeting in Horticultural Hall January 28 to listen to a paper on "The Value of Trees." The paper was voted one of the best of the series given during the winter. At the previous meeting Wilfred Wheeler, of Concord, read a paper on "Small Fruit Growing." At the next meeting Harold Parker, of Lancaster, will read a paper on "Development of Massachusetts Roads," and an invitation is given to all interested to attend this lecture. Mr. Parker is chairman of the state highway commission.

Winthrop Lewis, who started a flower store on a very lavish scale a little over a year ago, has had to make an assignment for the benefit of his creditors. An attachment has also been placed on his property in Marlboro.

H. F. A. Lange reports that Mrs. Jardine is one of the most popular roses he ever handled, its delicious fragrance and soft pink color making it very salable.

H. F. Littlefield has had some very attractive window displays of Killarney roses and pink baskets.

Frank Sokol, who recently bought the Book greenhouses, reports a good business.

Talks on Cypress

No 1.

Did you ever stop to consider that lumber is made in several grades and that each grade is for a certain purpose.

Cypress lumber is used for many things besides greenhouse material and for all of these purposes the various grades are made.

For railroad ties, trestles, bridges, factories, dwellings, trenches, barrels, tanks, etc. cypress is used but in various grades.

The highest grade of cypress is called "tank." This is used for making greenhouse material. The next grade is called "1st and 2nd" and is used for sash, doors and interior work for dwellings.

Planing mills as a rule buy the "1st and 2nd" grade of cypress and when they make greenhouse material this is the kind of lumber you can expect to get.

A greenhouse that is not built of "tank" grade cypress will never last, as the lumber will have sap on it and sap always rots quickly.

We use only "tank" grade cypress in making our material and every piece of lumber is inspected carefully before it is cut up.

Next week we will have some more to say about cypress. Look for our advertisement.

A Garland of Roses.

Thou art a garland of roses, of the rich red roses of love,
Which we, her children, are twining for our beautiful Mother above.
Each tiny head is a rosebud, each large one a rose full blown,
That lifts its pure heart to heaven with petitions from our own.

As we hold each tiny rosebud, and a sweet rose here and there,
We can almost breathe the fragrance that is wafted through the air.
And when the garland is finished and ascends to the realms above,
We know 'tis clasped on our Mother's brow with our kiss of the Cross of Love.
—Atlantic Journal.

SUGGESTIONS FOR PLANT GROWERS.

Pennisetum Longistylum.

This plant is in great favor for use in conjunction with cannas and large foliage plants in bold bedding designs to which it gives a fine finish. Sow seeds now and the seedlings will be ready for pricking out two inches apart in flats in about a month or six weeks. Give them plenty of room from the first and then, about a month before they are needed, one, two or three may be potted in 2-inch or 3-inch pots and will make nice little hard stock for bedding out. The crimson variety is a very beautiful one, not so much for use in canna beds as for planting in conjunction with green and white variegated subjects or with green foliage plants alone. Seed is offered and, if procured from a good source comes true.

Pelargoniums.

It is quite time to get these plants into shape and start them on their growing season. Any cuttings still in the bench must be potted at once and those potted some time ago must be given a new stand and plenty of room in a light, airy house. Old plants that were cut back and repotted as advised will now be growing freely from the new eyes that started and these shoots may probably have to be thinned a little. Whatever potting takes place see that the soil is very firmly placed. Pelargoniums will never make a satisfactory growth or flower well in loose soil though at first the growth may appear to be thriving, green and more rapid than that of the plants more firmly potted. But when it comes to flowering and taking up feed then the solid growth produced by firm potting has the other beaten all ways.

Fuchsias.

Cool treatment throughout is best for fuchsias. Plants rushed along in heat are never as strong or free in flowering as those given a regularly cool temperature from the first. Even in the propagating bed heat is undesirable and unnecessary, for in an ordinary greenhouse temperature of 50°-55° at night with the usual rise by day from sun heat, the cuttings will root freely and do well. Where the pyramidal form is desired, and this is the most natural method of growing fuchsias, no pinching will be necessary and the greatest care will have to be given not to let the little plants get potbound. If they do, they begin to flower in a small state and do not make a clean or vigorous growth. If the bush form is needed they may be pinched as soon as well rooted and again each time the plants are repotted. Should flowers appear in the points of the shoots at any other time pinch them out and bend all the energies of the plants toward making nice specimens by a few weeks before they are wanted in flower.

Gloxinias.

Sown now and grown along with care gloxinias may be reared into nice plants in 4½-inch pots by August, when they will make a very fine display. The erect flowering section of varieties is more showy and better in every way than the drooping or horizontal flowered forms. If the seed is obtained from a reliable house splendid varieties of the richest and most varied tints may be raised and they come fairly true to the description sent out by the raisers. The seed of gloxinia is very small and needs care to grow—not that it is difficult of germination as no seed grows more freely when fresh—but its small size makes it easy to wash away or to wash all on one side of the pans used when raising it, leading either to no plants or a crowded condition in certain parts of the pans. Prepare these carefully with fair drainage and fine soil that has been sterilized before use by placing over the boiler or otherwise exposed to considerable heat. Light, sandy loam and fine leaf mould with a plentiful sprinkling of sand will be suitable. Sow the seed thinly and carefully by hand, taking the least pinch between a dry thumb and forefinger for each pan and spreading it regularly. Never water from the surface but hold each pan in a tub or tank until the water just reaches the surface. Let them drain and dust a little dry sandy soil over the seeds; cover with paper and place in a temperature of 65°-70°. Look over them daily and water if at all dry in the same manner. If the atmosphere in the house is kept moist it will usually be unnecessary to water more than once or twice before the seedlings are up

when the paper must be removed and the young plants carefully tended. Their after treatment will be referred to in future notes.

Begonia Erfordii.

So constant flowering a plant as Begonia Erfordii should be largely grown by all plantsmen. Unlike the tuberous begonias B. Erfordii makes a very creditable showing in the flower beds during the dry heat of summer if it is well looked after for water, while it is practically never out of flower, making it difficult to get wood of a suitable character for propagating. Where the wood is at all hard it will be policy to cut over a few plants and depend on the new shoots that spring up for propagating. These may be inserted in the bench as soon as possible and all flowers kept pinched out of them regularly as they form. In about a month the plants will be sufficiently rooted to pot and they may be grown on in a gentle warmth right along. Nice little stock will be produced by Easter if the flowers are allowed to form about 30 days before needed and this will be very useful for filling around the base of Easter baskets or for selling in any of the small ornamental pots and vases that are so popular around that season. The fact that is not as generally grown as some other plants will lead to a brisk sale to people who are loking for something different to the usual stock sold and the plants are so easily and cheaply grown that they will show a good profit for handling.

Cinerarias.

No matter what the size of the plants the principal points to be observed in the culture of cinerarias are to keep the growth constantly moving and to keep them clean. To do this they must never be allowed to get potbound in any stage, this causing a decided check to growth. On the other hand large shifts are not desirable. At each shift give sufficient room to last the roots a few weeks, and the frequent provision of new soil will maintain the active growth that is so desirable. Heat is the worst thing possible for cinerarias. This, especially if coupled with a dry atmosphere, will cause the plants to be overrun with insects, ruining all chances of vigorous growth. If they are to grow on benches these must be covered with ashes, and a layer of tobacco stems, renewed as the nature from these is washed out by damping, will help to keep green fly in check. At all times a good circulation of air must be kept up about the plants, a stuffy atmosphere being fatal to good results. The foliage on well grown plants is full of moisture and very brittle, consequently, when moving them around or in potting, great care should be taken not to break them. Here is where the careful worker gets a great advantage over the man who only wishes to get a large number of plants through his hands. Anyone may pot a bedding geranium, but the man who wishes to get a good finish on flowering plants and have specimens fit for a high class trade must not only know how, but take the proper time to do the work. At present there will probably be plants in 2½ or 3-inch pots ready for a shift into the flowering size, and these may have attention at any time.

SOMERSET, MASS.—Traynor Bros. have built a greenhouse 12x120 feet at their home.

THE RETAIL TRADE

Dracena in Japanese Basket.

The simpler forms of decoration are often the best and the dracena in the Japanese basket herewith illustrated is both simple and exceedingly effective. This is the work of the Fleischman Floral Co., Chicago, and consists of a willow basket in dark, bronzy red with handle of the same color, filled with a fine plant of Dracæna terminalis, the base having a few sprays of Asparagus plumosus and the handle tied with a bow of green ribbon. Yet, simple as it is, it is different and has been found a good seller at the store in question.

Sale of Flowers on Sunday.

A bill has been introduced at the state house, on petition of the firm of Morse & Beals, Lowell, Mass., by which the sale and delivery of flowers on the Lord's Day is authorized. This is one result of the recent order from the police stopping Lowell florists from doing any business on Sunday. There are two sections, as follows:

Senate Number 149—On petition of Morse & Beals, that the sale and delivery of fruit and flowers on the Lord's Day may be authorized. Hearing scheduled to be held before the committee on legal affairs.

Section 1—It shall be lawful for retail dealers in fruit and flowers to sell and deliver the same on the Lord's Day, subject to such restrictions as may be imposed by the licensing board in the city or town where the sale or delivery is made.

Section 3—All acts and parts of acts inconsistent herewith are hereby repealed.—Courier Citizen.

Carnation Day.

Seven years ago the people of this country, as a graceful tribute to the memory of a well-loved and martyred president, set themselves to honor the memory of Wm. McKinley by observing his birthday each year. To do this it was suggested and the suggestion was immediately acted upon, that individually and collectively we wear his favorite flower, a carnation on January 29. The year following thousands, yes millions, of men, women and children carried out the pretty idea. But our memory as a nation is sometimes short-lived. This year the reports from all over the country show that with few exceptions Carnation day went by practically unobserved. There were here and there to be sure carnations upon the lapels of the men and dresses of women and children, but the number was so small that it hardly made any impression upon others than the wearers of the flowers. Wherein lies the trouble? The

A LONDON FLOWER SHOP.
Retail Establishment of Wills & Segar.

writer broached the subject to one of our most prominent retail florists the other day and asked him to give his opinion as to the cause, and he placed the blame of the falling off in demand on the grower, stating that as soon as his product is in demand, up goes the price and the public in general would not stand for it. For instance, a week previous to Carnation day, street fakers were selling their blooms at 25 cents per dozen, and all of a sudden there is a let up in the cut, up goes the price and the retailer's customers come to the conclusion that they are being gouged.

But there are other causes which can be laid at the door of the retailer. For instance, does he advertise the fact that he will have carnations at the right price for McKinley day? Does he encourage his customers to wear a carnation by presenting him with one and remind him of the fact that it is Carnation day? Would it not be a good idea for all local florists' societies to take a little money out of their treasury and place a little "ad" or notice in the daily press in the shape of reading matter reminding the public of McKinley's birthday and advocate the wearing of the carnation? Little things like these will not cost a fortune, but undoubtedly will prove very beneficial in a financial way to all concerned. S.

Cincinnati.

February Flowers in the New York Stores.

Though we have heard considerable complaint of late about the scarcity of flowers, a stranger making a tour of the leading retail stores would, quite naturally, wonder what it was all about. Excepting the Christmas and Easter seasons, when special efforts are put forth to make attractive displays, we do not recall a time when the retailers made their stores and windows more pleasing to the eye than at present. In speaking recently of the temporary shortage in good roses, the buyer for a leading retail store remarked: "It is fortunate that orchids are plentiful." That remark would be likely to call up a train of reflections in the minds of men who have been in the business for 25 years. We will be content to emphasize the fact that being plentiful the leading decorators have practically carte blanche to use them, and the effects produced, whether in wedding, dinner or window work, must always be delightful.

Though the supply of special or long stemmed American Beauty roses has been very light of late, the territory from which this market draws its supplies, is so wide, that they are generally to be had from some quarter. While we have sometimes felt constrained to criticise the quality of many Richmond roses offered here, at the present time there is a limited supply to be seen that are exceptional in their excellence. Notwithstanding a shortage in all the leading retail stores a good variety of pink, white and yellow roses may be seen. If there is but light demand for yellow roses, it is enough to state that they can be had if wanted. Killarney is leading all others in popularity, though there are many in the business who will always cherish fond recollections of Bride and Bridesmaid. With the increasing popularity of Killarney and the advent of White Killarney, it seems inevitable that the passing of the two old favorites is at hand.

In writing of the carnations seen in the retail stores of this city, it would be unjust to ignore the Ward productions, with particular reference to Alma Ward and Mrs. C. W. Ward. Alma Ward is a very large white flower with just a touch of pink in part of the blooms. Mrs. C. W. Ward, also a large flower, is bright pink. Both are popular and good sellers. It seems, from every viewpoint, unfortunate that the stock of these carnations has never been disseminated. There is a continued demand for Enchantress and its sports; Winsor, Beacon and Victory, with White Perfection, Georgia, Boston Market and other older varieties still enjoying a measure of popularity.

It is a safe conclusion that whether violet prices rise or fall, we will always have violets and that they will continue to be a factor in the trade. Though there is a constant street trade in violets which tends to reduce their status, no store can be without them. Recently we noticed in a leading store, a casket cover being executed in violets and thousands of them are now used for a like purpose. Though Rhinebeck has the monopoly of double violets, good singles are grown in other parts of the state, and many of these have of late been noticeable. White violets may also be seen, but the demand is not great. Trumpet Major, Golden Spur, Poeticus, the various forms of narcissus, have been and now are factors in retail trade. The demand for yellow narcissus does not seem to be as heavy as in some past years but a large amount of it is sold. It is also used with good effect in glasses, in window decorations. In one leading store we have noted very pretty effects produced by covering boxes of the flowering bulbs of yellow narcissus with crepe paper, and attaching a handle in imitation of a basket, pussy willows and ties of yellow ribbon being used as decorations. The upward tendency in the price of cut flowers seems to have turned the thoughts of the decorators to pot stock, as good window effects with pans of hyacinths, tulips and other stocks are now frequently noted. Neither can the displays of flowering shrubbery be overlooked. Flowering crab apple, quince, forsythia, in fact, about everything that can with advantage be forced is found in the show windows and it is doubtful if as good displays, at small cost, can be made with any other class of stock.

Pots of both white and purple lilac are displayed at times in the same manner, but the cut product of these being now an important factor, the use for display purposes is not so general. Azaleas, rhododendrons and primroses are now seen in quantities and are being much utilized for show purposes. Returning to the cut stocks, very fine and long stemmed sweet peas may now be seen, and they are flowers that will always enjoy a good measure of popularity.

JAPANESE BASKET BY FLEISCHMAN CO., CHICAGO.

Containing Dracæna Terminalis with Sprays of Asparagus Plumosus..

The sweet peas, narcissi, tulips and freesias, even if they do not rise to the dignity of leading stocks, must always be taken into account and their importance is never better understood than at a time when the market takes an upward turn. Freesias are in very fair supply at present and there is great improvement over former years in the quality of this stock.

The Floral Ball.

An artistic floral fad which is rapidly being adopted throughout the country, made its debut simultaneously with Miss Ethel Roosevelt at the White House ball. It is the hanging ball of flowers suspended by ribbons from the arm.

All the debutantes at the function carried balls of delicate pink carnations and feathery ferns hanging from yard lengths of moss green ribbon looped over the arm. Both artistic merit and the distinguished nature of its introduction has brought the floral ball, also called the moss bag, into immediate popularity, says a Philadelphia paper. The girlish simplicity of the new mode will insure its favor among the younger set. Violets and roses are especially effective made up in the new manner.

THE CARNATION.

CARNATION BRITTANNIA has proved an absolute failure in this country thus far.

AFTERGLOW, according to some very competent growers, does not produce enough bloom to pay.

"WHITE PERFECTION excels White Enchantress in blooming by 25 per cent and is never off crop," says a good grower.

THE old Mrs. T. W. Lawson, it is said, is still without a peer in its color when its long distance shipping qualities are considered.

CARNATION May Day takes the fancy of many growers on account of its beautiful coloring, which is brighter than the Enchantress shade.

Resolutions on the Death of L. E. Marquisee.

Whereas, We, members of the American Carnation Society in annual convention assembled, deeply mourn the loss of our esteemed fellow-member and beloved friend, the late L. E. Marquisee, whose constant aim in life was a higher professional standard for himself as well as his fellow craftsmen, with ever sympathetic regard for the infirmities and frailties of mankind. Brilliant beyond the common lot, a close student of art and letters, his wide range of knowledge was ever at the service of a large circle of friends in the advancement of floriculture. He loved plants, nature in all her infinite variety, but with a superlative knowledge of all the flowers, he reserved for the carnation, the "flower divine," his fondest affection. Therefore be it

Resolved, That we mourn the loss of one who was sincere beyond measure, one to whom life was a dower to be spent with untiring effort for the good of all. We mourn his loss and be it further

Resolved, That we extend to his family and friends our heartfelt sympathy in their great bereavement, and further,

Resolved, That these resolutions be spread on the records of the society and copies sent to each member of the family.

J. C. VAUGHAN,
AUG. POEHLMANN,
Committee.

Indianapolis, Ind., January 28, 1909.

F. R. PIERSON CO.'S PURE WHITE SEEDLING CARNATION NO. 30.
Awarded American Carnation Society's Certificate of Merit at Indianapolis.

mpressions of the Carnation Show.

The first impression made in attending the exhibition of the American Carnation Society at Indianapolis, either as an exhibitor or merely as a visitor, was the admirable location selected and the favorable facilities offered by the hall in which the exhibition was held. No better facilities could be designed than those afforded by the German house; they were ideal in every respect. The location was near enough to the hotels and the car lines to be just right.

On entering the building a large, easy flight of stairs led to the main exhibition room, which was really a small theater, with windows all around, so that every carnation could show its color with no complaint being heard regarding lack of light. This is a most important feature. For those who attend to get knowledge of the new varieties it is absolutely necessary to see the colors by good daylight. Where artificial light is used the apparent shades are apt to be deceiving.

The show of flowers certainly looked as though it could never be improved upon, and probably in future years the advance in the average quality of exhibits will not be as great as in the past; still I have no doubt but that there will be some improvement in each succeeding exhibition.

One of the main lessons seemed to be that the larger growers are confining their efforts to fewer varieties, getting down to those sorts that are acknowledged the best in each color. For instance, White Enchantress, White Perfection and Lady Bountiful were seen to be the mainstay in the whites. So in all the colors, with the exception of the seedlings, the exhibits were largely confined to a few standard varieties. In former years exhibitors showed from a dozen to 20 varieties, but this year the largest exhibitors were content with showing half that number.

Another thing that impressed a visitor was that there was not a single poor vase in the entire show. It was the largest lot of really high grade flowers I have ever seen together at one time, and certainly justifies an annual exhibition being devoted to this one grand flower. The exhibit of seedlings was probably the largest that has ever been held. There were a few very promising varieties shown, but the vast majority did not seem to be any inprovement on existing sorts, indeed many were not their equals.

The taste used in arranging the display of varieties was a noteworthy feature of the show, and that the exhibition was appreciated by the general public was shown by the vast throng of people constantly in attendance on both days. But the one feature of the exhibition which every visitor felt on arrival was the grand hospitality extended by our Indiana brethren. The brand of poetry handed out by the Hoosiers is certainly good, but the brand of hospitality is even better. C. L. WASHBURN.

NYACK, N. Y.—Chas. Schmidt has opened a new store at his old stand in the Columbus Hotel building.

CHICAGO.—The city council has passed an ordinance prohibiting second-hand dealers from purchasing funeral wreaths and moss from the graves of those who have met death by contagious diseases. This was done in ignorance of the fact that a similar law is already in existence. "The dealers," said Alderman McKenna, "purchase these wreaths from cemetery attendants and sell them again to the poor. They are taken into the homes of other families to serve for a second funeral and who can foresee the results?"

The Recent Carnation Convention.

A paper read by Albert M. Herr, president-elect of the American Carnation Society, before the Florists' Club of Philadelphia, February 2.

With an ideal hall, ideal weather and the assistance of our loyal growers, Indianapolis had the exhibition par excellence of the American Carnation Society since its origination. In 1894, in a hall corrider of the Denison hotel, we had an exhibition in which the variety The Stuart exhibited by Fred Dorner & Sons, won the gold medal offered by the Chester County Carnation Society. Certificates were awarded at that exhibition to varieties Uncle John, Helen Keller, Jubilee and Edna Craig. There were all told about 40 vases of flowers at Indianapolis then.

In 1902 another exhibition was held at Indianapolis, at which there were shown some 200 vases, some of which were magnificent flowers judged even by today's standards. At this exhibition, by the united effort of Messrs. Bertermann, Rieman and Wiegand there was a fine display of plants and flowers so arranged that they made a valuable artistic adjunct of the show.

Getting back to 1909 we find a display of 4,800 blooms in class A; 4,500 in class B; 1,200 entered for the society's medals; 700 blooms for the S. A. F. medals and at least 5,000 more in the miscellaneous classes, a display well illustrating the growth of this society. We also found at this exhibition the same eye for effect, exercised at our exhibit of 1902, and the same ratio of improvement was noticed. A more artistic show we never had, in fact, looked at from every point of view, a more successful show has never been held by this society.

Owing to the ideal hall and the ideal weather the flowers were as good the evening of the second day as they usually are the evening of the first day. The show was a success from a publicity point of view as the admission, by card, resulted in the turning in of over 2,500 cards the first evening, the total card attendance reaching close to the 20,000 mark. Add to this those who entered without cards and you have at least 25,000 people viewing almost that number of well grown carnations, many of them perhaps realizing for the first time the beauty and possibilities of the flower. Some of our members are parsimonious enough to think that a small fee should be charged for admittance, a policy which, if followed up, would no doubt have meant in this case a reduction of two-thirds in the number attending the show.

To attempt a description of varieties or give an estimate of their value would be more than I care to undertake, but it may be interesting to know that our own E. A. Stroud won out in the 100 white class with Lady Bountiful and the same vase won the fourth prize in the sweepstake judging of the whole class. White Enchantress coming second with White Perfection left out of the race, practically an opposite result from that at the great Chicago show earlier in the season.

Dorner's Pink Delight won out in its class with some stiff competition. In the light pink class Dorner's Winona came first with Sangamo a close second. We all know Winona to be good; Sangamo we will watch with considerable interest as it looks like a good thing. In the dark pinks, Afterglow won both first and second, and on the benches at Richmond it would have won the gold, silver and bronze medals and anything else lying around to be won. In the scarlets O. P. Bassett came to the front in spite of its lack of fragrance. In the maroon, No. 60 by Pierson and Mrs. Walter Coles were the deserving winners.

In yellows J. Whitcomb Riley was the only one in sight but it was well worth seeing, a pure yellow of commercial size and commercial quality. A peculiarity of this variety is that it is yellow under artificial as well as under sunlight. Its dissemination is in some doubt as the originators (Bertermann Bros.) do not care to disseminate it and it has created such a furore in English circles, where a good yellow is wanted, that we may lose it. Bay State, an improved striped variety, was quite an attraction to most of the growers.

Our Dorothy Gordon was admired by everyone and I am sure that if Mr. Heacock could have heard some of the comparisons made between Dorothy Gordon and a magnificent vase of Rose Pink Enchantress along side it he would seriously consider divorcing his rose and palm business and clinging to Dorothy Gordon alone.

In the purely seedling class there were so many good things that I would not like to go on record as exalting any special ones, but Dailledouze's white and The Shasta of Baur & Smith and a red or scarlet of Dorner's were in the center of the stage and created quite a furore. It is to be hoped that many of these seedlings exhibited prove good commercial varieties as they certainly were grand show varieties.

Aside from the exhibition, much is to be learned at these meeting in the side remarks of various growers. A quiet tip on a novelty that is being introduced this year and of which I have 1,000 plants in pots will make me plant them in a part of a house where I can tear them out and use the space for young stock in the spring if they do not prove profitable. I also had several good tips on varieties coming out next year, some to buy and others to let alone. I am not going to give any of these tips away; if you want to get similar information go to our meetings. Our next one is in Pittsburg, and Philadelphia should have an attendance sufficiently large to fill a special car.

F. R. PIERSON CO.'S DARK PINK SPORT OF WINSOR.

Lawson Shade But Brighter and More Even—Certificate of Merit at Indianapolis.

BOSTON, MASS.—Martin Tuohy was presented with a handsome traveling bag by his friends January 30.

BLOOMFIELD, N. J.—"Volunteer firemen, working on two greenhouses of mine that were worth $2,000, caused the destruction of three others, worth $3,000, that were not on fire," complained John Brozat, to Mayor Sutphen February 3. Mr. Brozat said he asked the firemen to keep away from the uninjured greenhouses. They refused. His boilers were cooled and $3,000 worth of plants froze. J. Hauk, a neighbor, said the enthusiastic volunteers also froze a lot of his flowers by turning streams upon his greenhouses.

CHRYSANTHEMUMS

Notes on Varieties.

The varieties made prominent in our comments on the Chrysanthemum Review of the issue of January 30 may not be in accord with the ideas of many prominent growers, and, if we were making a specialty of commercial varieties for bloom there are some changes which we believe would be advantageous. However, the varieties mentioned must be accepted as good for the purpose, as it is a resumé from 26 cities giving the prominent sorts which appeared on the market the past season.

From present indications it is evident there will be none too much stock to meet the demand, for such kinds as Golden Glow, Pacific Supreme, White Cloud, Golden Eagle, Lynnwood Hall, Virginia Poehlmann, Crocus, President Roosevelt, Ongawa, and several of the older kinds. Who has said a good word for John Lemon? It has not received as strong endorsement as it deserves. For those using bi-colored flowers (crimson with old gold reverse) it is unsurpassed for commercial use, producing double flowers of beautiful color from the late buds. It is rather dwarf and requires planting fairly early to secure a good length of stem.

In checking up the awards at the National Flower Show we find Col. D. Appleton, which is generally conceded as one of the best commercial yellows, is also one of the best for exhibition; at least it was awarded more prizes than any other variety, namely, first in 50 vase and sweepstakes in these classes; also first in 25, 12 and 6 dark yellow. This is a wonderful showing. Some comnlain that its stem is weak under the bloom. We do not understand the cause of this defect unless the stock is planted late and crowded, so as to prevent a free circulation of air; it has always been very satisfactory with us.

The English critics have taken the writer to task for applying the name of Golden Glow to the early yellow sent out last year. It is true the rudbeckia commonly known by this name, is not to be compared, either in size or color, with the chrysanthemum. But it must be remembered the long list of names appropriated to this class of plants is making it more difficult each year to select those which are distinct. The term Golden Glow is also applied to brilliant lightings of the sky and various things producing a like effect. It seems to us the slight discrepancy in shade of color is far preferable to using an old name and thus causing confusion. In looking over some of the English catalogues we find such names as Romance, Mignon, Snowstorm, Simplicity, Diana, Snowball, and we presume there are others, which have been previously used.

Probably some of the original varieties are now extinct, but the old Diana (white) is still grown for sprays, whereas the new Diana is an early bronzy red. We now have in stock two varieties known as Mignon—one an early yellow pompon and the recent arrival (French origin), rosy mauve, flowering in September. In mentioning duplication of names it may be well to state there are two named Buttercup, one an incurved, the other a small flowered single; both, of course, are yellow.

ELMER D. SMITH.

Propagation.

This subject has been written upon so many times, that it is impossible to advance new ideas. It may, however, be of interest to beginners. It is first necessary to provide a bench to receive the sand into which the cuttings are to be inserted. In selecting a bench for this purpose it should be one provided with heating pipes underneath so the sand can be kept at about 65°, and should be located in a house where abundance of air can be given, so that the overhead temperature will be about 10° less than that of the sand. We prefer benches constructed of concrete for when so made there is less danger of fungus attacking the cuttings as this material is always sweet and clean. Board benches may be used, but all old decayed parts should be replaced with new as the decayed lumber is infested with fungus and is often the cause of failure.

Tamping Tool or Propagating Bench.

W. H. Siebrecht, Jr...New York.

Secretary New York and New Jersey Plant Growers' Association. See Page 80.

The length and breadth of the bench must be determined by the amount of propagating to be done and the width of the benchs at hand. If the bench is over three feet wide (an easy reaching distance) it is best to place a strip on edge through the middle and thus divide into two long narrow beds; when so arranged it will facilitate in putting in and taking out the cuttings. Before filling, these beds should have a coating of whitewash which will help to keep them sweet. Four inches of clean sand can now be put in, then firmed down, given a generous watering and it is ready for the cuttings. The accompanying illustration shows a handy tool for firming the sand. The handle is easily made with saw and knife from a piece of 2x4 and is then screwed to a piece of ⅞ board cut 6x16 inches. Then take a piece of 2-inch plank the same size and nail the first section securely thereto.

Provision should now be made to protect the cuttings from direct rays of the sun. Being devoid of roots the object is to maintain conditions, which will keep them normal until the roots are emitted. We prefer to shade the entire house, by tacking some semi-opaque material to the inside of the roof. Formerly we used burlap, but are now substituting a rather heavy grade of wrapping paper after it has received an application of linseed oil. At the advent of brighter days and higher outside temperature this shading is supplemented with a coat of whitewash on the outside of the glass to further obscure the sunlight. If these methods seem impossible newspapers may be placed over the cuttings with fair results. It must also be remembered these rootless cuttings are sustained through absorption by what is known as capilliary action which is lifting moisture through the hair like tubes, and this prevents them from flagging. From this it will be seen that a continuous supply of water is of vital importance. Never allow them to suffer for the want of it.

ELMER D. SMITH.

The Plant Growers of Springfield, O.

The term plant growers is one that can well be applied to the majority of the florists of Springfield, O. Few persons of the trade realize the enormous amount of stock the plant growers of this city are growing and shipping annually with very little said about it, neither do we hear much of the other plant growers over the country.

The various trade papers have their departments for other specialties, but little do we hear from the plant growers. Perhaps this is due to the lack of organization more than anything else. Of course, we have the Society of American Florists, which is a grand organization, composed of the best of men in all branches of the trade, but it can hardly be expected to gain a desired result for any one special branch of the trade from an organization whose members represent so many different lines and would probably be uninterested to a degree more or less in any one special line.

Are not such organizations as The American Carnation Society, the American Rose Society, the Chrysanthemum Society of America, the American Seed Trade Association, the American Association of Nurserymen, etc., doing a grand work in various ways? Are not the higher grade stock of today and trade conditions made better by the efforts of these various societies in trying to improve both the stock and other matters pertaining to the trade in the respective lines they represent?

In the issue of the AMERICAN FLORIST of February 6 there is an article from Vaughan's Seed Store on "Wholesale Prices to Amateurs." This is one of the many conditions that can be remedied by a society of plant growers. I also noticed, in the same issue, in the address of Robert Craig, Sr., at the annual banquet of the New York and New Jersey Plant Growers' Association, he said he believed any body of organized men could

A WELL FLOWERED HYDRANGEA.

do much more to forward any particular competition than an individual; he said that man's success depends much on himself, but after he has done all in his power as an individual much more can be accomplished by an organization. If much more can be accomplished by an organization of these two states certainly much more can be accomplished by an organization of the plant growers of all the states.

C. G.

Hydrangeas.

The plants of Hydrangea Otaksa and other nearly related varieties of the old H. hortensis that are so freely imported to this country render the production of such fine specimens as those depicted in the illustrations herewith quite easy and, in consequence, many growers do not take the trouble and time necessary to propagate and grow on plants but depend on the imported ones. Where the conveniences are not of the best this is decidedly the most profitable and best thing to do as they are soon grown and out of the way. The plants are usually bedded out in protectors when they arrive and may be potted and started at any time, some growers making it a point to begin at the new year. Care is necessary in handling them not to break off the buds that are formed on the ends of the shoots as these contain the flowers in embryo and their loss means the loss of the flower trusses later.

Any good soil will do for the plants as it is easy to make up any deficiencies later by feeding with liquid manure, but it must be in good heart and firmly placed. After potting give one thorough soaking of water, enough to moisten every particle of soil, first standing them on a level floor, and when they have drained a little take them to a cool house. Here they should remain as long as possible in order to give the roots a chance to get hold of the new soil, but the time they can remain depends upon when they are needed. If they are wanted for Easter, which this year falls upon April 11, then they will have to go right into heat at once, moderate heat it is true at first, but still enough to start them growing or there will be no chance of having them on time. Memorial day plants may be kept in the cool house another couple of weeks and started, say the end of February. From 45° to 50° is warm enough at night for the first two weeks and after the growth gets well away then more heat can be applied as it is seen whether the plants are likely to be on time or not. It is much easier at the finish to keep the plants in good condition by taking them to a cooler and drier house than it is to force them into flower at the finish, very high temperatures leading to poor color in the flowers, so start in time.

As the growth develops it will be easy to see how the plants are coming out as to flower and shape, and a little manipulation of the growths early in the season is well repaid by the better specimens produced. Room again and light are important. Good specimens cannot be produced when the plants are stood close together and only moved apart when the foliage touches. Let them be so arranged that light and air reach every part of them and only start so many plants that there will be room for when fully developed. As the foliage develops, the roots naturally become more active and feeding will be necessary. Soot water is an excellent fertilizer if given in change with liquid made from shredded cattle or sheep manure and the plants will take a lot of it when the pots are filled with roots. They need it too as the great heads of flowers and the foliage make a great demand upon the roots which cannot be filled if the latter are tightly packed in poor soil. All through the growing season and until the flowers show color the heads must be sprayed daily, in ordinarily bright weather twice a day when hot and the atmosphere must be kept moist by freely damping around the pots and under the benches. These few simple details carefully carried out will enable anyone, no matter of how little experience, to grow this, one of the finest decorative plants, to perfection.

COMMERCIAL.

CHAMPAIGN, ILL.—Thos. Franks celebrated his sixty-fifth birthday on February 8. The new range of houses of Thos. Franks & Son is producing a fine cut of roses and carnations at this time.

HOUSE OF HYDRANGEAS AT ESTABLISHMENT OF J. W. DUDLEY & SON, PARKERSBURG, W. VA.

Dahlia Notes.

If the work has not already been attended to look over the dahlia stock. Many a partially decayed tuber may be saved by removing the decayed portion. All decayed tubers should be removed and burned or thrown where they will not infect the soil where the dahlias are to be planted this season. There is no doubt that certain kinds of rot are infectious. Rot of all descriptions is most prevalent, while the tubers are in a dormant condition. In fact, I doubt if they are ever attacked while in a growing condition.

Some varieties are much more susceptible to rot than others; indeed some are so susceptible that we always count on the percentage of loss from this cause. A notable instance is the popular Grand Duke Alexis. Other varieties there are that are rarely, if ever, attacked and seem to be immune to all disease troubles. Rot is usually caused by improper storage methods and yet it cannot be justly said that it is always so for an occasional clump will decay in spite of all precaution. The stalk of the previous season's growth is a prolific source of infection. This stalk nearly always decays down to within an inch or two of the crown. It should be cut off at or a little below the surface of the ground and then there will be little or no decay from this source.

In early February all stock should be worked over and examined. If it is keeping well on the tops of the bins or barrels, it is not likely that there is trouble farther down. But if some decay is found, go down as far as it extends, removing everything in the nature of soft or wet rot. Air slacked lime is an excellent article to dust over affected stock, or the clump may be dipped in Bordeaux mixture—just dip and out again. Where it is found that stock is not keeping well it should be brought into warmer quarters where the eyes may start as soon as possible. This is a most effectual way of checking rot. It is well to remember, however, that an ounce of prevention is worth several pounds of cure.

Dahlias should never be stored in winter quarters where there is decayed matter or where the walks are damp and moldy. Dampness in itself does no harm, for dahlias will keep nicely in a pit in the open if an arrangement for a little air is made. The danger lies in the damp air becoming stagnant and foul. An ideal place of storage is a clean, cool cellar, where there will be some circulation of air and at the same time security from frost. It is advisable to cover the tops of the bins, barrels, or boxes after they are full with paper and for this covering newspapers will answer every purpose. Sand makes a good packing material where only a few are to be stored but it is too heavy where a large quantity is handled, and unless new sand is used each year it may contain disease germs. Just here let us remark to our eastern readers that the past season's drought throughout the east and middle west has probably produced conditions that will cause considerable rot in dahlia stock. In fact, several bad reports have already come to my notice. I recall the season of 1902 when there was a severe drought throughout the west and even the irrigation ditches out here failed us. The winter following we lost nearly one-half our stock. It rotted in spite of all we could do to save it. And yet in spite of all the foregoing the fact remains that the dahlia tuber is probably as easily kept and with as little loss as any class of tubers or plants grown that have to be wintered over.

W. W. WILMORE.

Alaska-Yukon-Pacific Exposition.

For all who love flowers, the Alaska-Yukon-Pacific exposition, which will open in Seattle, Wash., on June 1 of the present year, will offer satisfaction, and a field for investigation and experimentation to which attention has not heretofore been called. To the florist and horticulturist it will offer climatic conditions existent nowhere else in America, with the consequent new problems and interesting demonstrations, and a range of native flora almost unexplored.

More than in any other world's fair the promoters of this exposition have

relied upon the splendid capabilities of nature, scientifically controlled and directed, for the beautification of the exposition reservation. Sculpture there will be in plenty, splendid works of Frolich and other molders, set throughout the grounds, but it is in the magnificent garden scheme, set into a landscape of transcendant beauty, that reliance is placed and which will be the exposition's proudest boast. The three telling features are three vistas, Rainier vista, Washington vista and Union vista, which give out from the central exposition feature—the cascade court and geyser basin—upon a world of heaven-aspiring snow capped mountains, and gem-like lakes. These three vistas tie in finely with the architectural formality of the central features, making one grand piece.

The chief one is Rainier, which is on the main axis. As one looks down from the geyser basin, the first feature is the formal garden, which consists of a geometrical design, a parterre, the different divisions of which are bounded by hedges of Berberis Thunbergi, which will be kept low. The east and west divisions of these formal gardens will be devoted to hybrid perpetual and tea roses. The central part will be devoted to herbaceous perennials and annuals.

For half of their distance the sides of Rainier vista are lined by hedges of Douglas fir. These have already been planted and are of an average height of 20 feet and have been clipped into a formal hedge. It may be interesting to know that all of these firs were gathered from the native growth on the exposition grounds. A grass strip between the walks and this hedge of fir, will provide a formal ornamental arrangement of vases with flowers, sculptured seats, lamp posts and flower beds. The central portion from the lower line of the formal gardens, to a point half way down, where it dips between rather abrupt banks, is to go into grass. On the banks alluded to will be planted various perennials, among which generous use will be made of Coreopsis grandiflora and one of the native lupins.

Both Washington and Union vistas will have fir hedges, but only on part of one side of each. The vase treatment, a feature of Rainier, will be omitted, but the lamps, seats and flower beds will be similar. One of the leading features of both of the last named vistas will be the large lawn areas. In the case of Washington, all of this embellishment of grass, flowers and hedges will be greatly heightened in effect by a magnificent view of Lake Washington, lying below the exposition grounds, and, in the distance, the saw toothed Cascade mountains and Mt. Rainier, which towers to a height of 15,000 feet. In the case of Union vista, there are glimpses to be had through the growth, of some of the finest residence districts of the city, but so far removed and so set in woods as to enhance, rather than detract from the general woodland impression.

The geyser basin, part of the central feature, is surrounded by slopes on which there will be planted 100,000 tufted pansies (Viola cornuta hybrida). The varieties used will be Sutton's Giant Yellow, Sutton's Giant White, John Quarton and Blue Perfection. At the tops of these slopes will be a 2-foot horizontal upon which will be an arrangement of perennials and annuals of a taller growing habit than the pansies. In the cascade court, which has similar slopes, the banks are planted with Dorothy Perkins rose, among which will also be planted many annuals and herbaceous perennials, to add to the display made by the rose and also to continue the display after the rose has ceased to bloom.

Along the agriculture and manufactures palaces, which flank the court, will be a large display of the official flower, the cactus dahlia. A large display will also be made of the state flower, the wild rhododendron (Rhododendron Californicum). This is a species closely related to the eastern R. maximum, which it very much resembles and is sometimes mistaken for. The big fun feature of the exposition will be the pay streak. It will be the Seattle equivalent for the Midway at Chicago, the Pike at St. Louis, only it promises to exceed either of these in noise, color and amusement. In keeping with the character of the section that portion of it which is between high sloping banks, will be made a riot of color. For this, bright flowered geraniums, mostly red, will be used exclusively. To the growing of these geraniums and also an immense lot of other annuals, from seed and cuttings, 9,000 square feet of greenhouse room is devoted. There are also many hundred sash, both cold frames and hotbeds. In one of the greenhouses, to make up for sunlight which is absent through the midwinter months, three lights are used. The greenhouses are located in the nursery, which comprises about 10 acres, mostly devoted to herbaceous perennials.

To return for a moment to the central features; on the manufactures and agricultures buildings are immense pergolas which will be covered with vines of various kinds, and on the balustrades of the cascades and geyser basin are vases

of the same design as used in Rainier vista. These will be planted, in the center, with tall-growing plants and hanging plants will be planted on the sides. The tall growth will probably be Phoenix Canariensis.

There is still left standing much of the original forest cover. While these trees are not as large as some of the celebrated trees of California, for instance Sequoia gigantea and S. sempervirens, they are still very large indeed, when compared with eastern tree growths, some of them being 250 feet in height. For the most part, these are Douglas fir. The landscaping contract is in the hands of Olmsted Bros., and James Frederick Dawson, their special representative on the grounds, has personal direction.

Formosa Lilies.

The so-called Formosa lilies do not come from the island of Formosa, but are grown in some of the smaller islands of Japan. Probably the island of Ohima is the most important source of supply at present. They are southeast of Japan, in the warm tropical streams. These lilies are seedlings brought from the island of Formosa and consist of a mixture of all kinds of lilies, some are Multiflorum, some Giganteum, some Eximium. The growth of these lilies has been effected by planting them in the warm climate of these islands to such an extent that they mature earlier than the lilies of Japan. Shipments were received in Chicago this year about the middle of August. The growers who bought them last year were very much pleased with the results, and there was a large increase of planting of Formosa lilies this year.

The Formosa responds more quickly than the Japan lilies to greenhouse culture. Of those that were planted about the middle of August, some came in bloom by the middle of December. The greatest trouble with these Formosa lilies seems to be that they grow all heights, some are only 12 to 15 inches tall, and from that up to five feet. This causes a constant shifting of the pots in the benches to keep the tall plants from shading the short ones.

There seems to be no difference in the flowering qualities of the different varieties, as the Giganteum or black stems were in bloom just as early as the others. They all seem to be practically free of disease. So far the bulbs that are being distributed are very small. While the dealers send them out under the grade of 6/8, that is 6/8 inches in circumference, they prove smaller on receipt of the goods.

The method of culture of the Formosa lilies is just the same as the other lilies, though they can be planted in the greenhouse as soon as potted, if desired to get them very early. The introduction of these Formosa lilies will cause quite a change in the demand for both the Harrisii and the Giganteum lilies. The Formosa are so much purer than the Harrisii, and besides are just as early and as easy to grow as the Harrisii. A good many of the Giganteum have been grown for Christmas forcing. These Formosa lilies will take the place of that production of stock. It is hoped that the increased demand will not result in the Japanese spoiling the quality of the lilies by poor cultural methods.

WORCESTER, MASS.—W. L. Lewis, of this city and Marlboro, has made an assignment to William E. Clapp for the benefit of creditors.

To Be Done Now.

IN THE GREENHOUSES.

Thin the growth shoots on the old cutback plants of pelargoniums.

Wake up the stock coleuses and get them into growth for producing cuttings.

Sow cannas if any are to be raised this way, also Centaurea gymnocarpa and any annuals for early flowering under glass.

Continue to put in leaf cuttings of Begonia Gloire de Lorraine and similar varieties until a sufficient stock is insured.

Propagate sweet alyssum freely now also lobelias and the green and variegated vincas.

Finish the potting of imported hydrangeas and other stock and get them started or keep in a cool house according to when they are wanted in flower.

When very cold weather necessitates hard firing see that plenty of water is used around the houses to soften the temperature and prevent the rapid propagation of insects.

Keep a bright look out for green fly, especially when cold winds prevail outside, and fumigate lightly directly the first insects are seen.

Propagate any chrysanthemums of which stock is scarce, and the plants can be topped and the tops rooted later.

Root fuchsia cuttings cool and keep the plants in cool growing quarters right along.

Keep cut back bouvardias fairly dry at the roots but spray the heads regularly in bright weather. This will induce a free growth of young shoots that are wanted now for cuttings.

OUTDOORS.

Where concrete work is in progress always have the mixing board and all tools thoroughly washed and clean before putting away for the night, or much time will be wasted in the morning removing the hardened cement.

Should the young shoots of Eremurus Himalaicus or E. robustus show through the surface soil see they are covered again with soil or protected in some other way. Mild spells in winter often excite these plants.

Mix plenty of lime rubbish or old building refuse and burnt soil or garden rubbish with the soil for cucumbers and tomatoes.

Prepare the quarters for tree planting with as much care as would be given to vegetable or flower quarters.

When the weather is suitable push on with the preparation of the soil for asters, sweet peas and other crops that are to be grown in quantity for cutting but keep off when wet.

Look over the hardy perennials stored in frames occasionally when the weather is mild, removing any damaged leaves or decayed stems. A good airing occasionally, even before the covering is removed, will do good and prevent early growth.

Use plenty of rough moss, hay or some such material between the roots when packing trees to prevent their being broken or twisted when tying the bundles.

Twenty Years Ago.

FEBRUARY, 1889.

John Thorpe was working along the lines of forming a national chrysanthemum society.

The giant ghost flower was the name given to Datura arborea.

A New Jersey mushroom grower was said to be so jealously guarding his "secrets" in growing this crop that visitors were confronted with a "rough looking man a a couple of big vicious looking dogs."

They called it "salting" then not "pickling."

Freight rates on pots was a vexed question.

Rose Souvenir de Wootton, raised by John Cook of Baltimore and named in honor of the occasion when Geo. W. Childs entertained the Society of American Florists at Wootton was among the novelties.

Crude petroleum was being used as a preservative for wood used in bench bottoms.

A fine orchid show was held in New York by Siebrecht & Wadley, Coelogyne pandurata was among the unusual plants shown, and a fine albino of Cattleya Trianæ valued at $1,000.

What is the cost of producing water gas for fuel? was a question suggested by John Temple of Davenport, Ia., for answer at the coming S. A. F. convention.

French Gardeners' Society of London, Eng.

I have just read with no little interest the autobiography of that well known Franco-American, Louis Menand. Seated a few nights ago by the side of a young Burgundian gardener, I could not help thinking how much Louis Menand would have enjoyed the evening spent at the Café Royal, London, at which were gathered many French gardeners living in and around our great metropolis. The occasion was the celebration of the twentieth anniversary of the society, and Sir Albert Rollitt, president of the National Chrysanthemum Society, was in the chair. That fact was sufficient to bring together a large and appreciative audience of Englishmen and Frenchmen, for Sir Albert is not only a fluent but a most entertaining after-dinner speaker.

The French Gardeners' Society and the National Chrysanthemum Society have always been fast friends, and therefore many of Sir Albert's colleagues were among the visitors. When the time for speech making arrived, Sir Albert, wearing the cross of officer of the Legion of Honor, out of compliment to the Frenchmen present, proposed the healths of the president of the French republic and King Edward VII. Then followed the toast of the evening, "Prosperity to the Société Francaise d'Horticulture de Londres." Brimful of humor and quaint stories, Sir Albert Rollitt traced the history of the society from its early days, eulogized the devotion of its president, George Schneider, and paid a tribute to the ability of the society in promoting good will between the gardeners of the two countries. We regret our space will not allow us to give a fuller report, as many of the French gardeners in America would be peculiarly appreciative of this fraternal Anglo-French gathering, which assumes a more important character year by year. Owing to the death of M. Ouvrard, the society's honorary president, it was announced that the eminent French nurseryman, M. Philippe de Vilmorin, had accepted the vacant place. Various toasts, including those of the chairman, past chairman, the officers and the press, were given and duly honored. A presentation was made to C. Harman Payne for his cooperation at the recent Paris autumn show, Sir Albert Rollitt speaking in the warmest terms of Mr. Payne's services in international horticulture, particularly having regard to his journalistic work. The young French gardeners present made a presentation of a silver bowl to the chairman of the soicety, George Schneider, and a very happy evening closed by the company singing "God Save the King," "Auld Lang Syne," and the "Marseillaise." P.

A Strawberry Romance.

A. B. Henthorn has returned from Van Buren, Ark., bringing with him a bride. Quite a romance is connected with the marriage. Two or three years ago Mr. Henthorn purchased a box of strawberries which contained a note with the name and address of the sender. This was the beginning of a correspondence which ripened into mutual love and culminated in their marriage at Van Buren.—New York Sun.

WHINIVER annybody offers to give ye somethin' f'r nawthin,' or somethin' f'r less thin it's worth, or more f'r somethin' thin it's worth, don't take any chances—yell f'r a polisman.—Dooley.

THE S. A. F. medals and certificates awarded at the National Flower Show have all been delivered. The silver gilt medal is an especially handsome thing.

MISS HILL'S Indianapolis address, which appears in our issue of February 6, page 62, deserves a prominent place among the classics of American floriculture.

THE one-hundredth anniversary of Lincoln's birthday gave retailers a fine opportunity for originality in their window dressing which was taken advantage of by many.

F. R. PIERSON says the standard yield from roses under glass today is $1 per square foot, ground area, including paths as well as benches, and for carnations 50 cents per square foot. Where the yield is less the grower is losing money.

AGAIN we must request all correspondents seeking information through our columns to sign their communications and give their full address. We are repeatedly receiving unsigned letters and postals, often with a blurred postmark, and it is usually quite impossible to locate the senders.

THE "Annual Proceedings and Bulletin" of the American Rose Society (1908) is a most interesting publication containing, as its title indicates, the full proceedings of the society during the year just passed with especially complete reference to the show held at the Art Institute in Chicago in March.

THE rules and prize list for the third spring exhibition of the St. Louis Horticultural Society, to be held March 24-26, has been received. The prize list is a good one and among the interesting classes are one for a display of hardy shrubs in bloom, for which $25 is offered as a first premium, and a table decoration of spring flowers, for which $20 and $15 are offered. Otto Koenig, 6473 Florissant avenue, is secretary.

F. VON STRANTZ has obtained a German patent for a process of destroying insects on plants by the application of a mixture of lime water and the ammoniacal liquor of gas works. The patentee states that neither lime nor ammonia, used alone, is a certain insecticide in dilute solution, and that strong solutions are injurious to plants, especially green plants, but that mixed solutions of the two alkalies, too weak to do any damage to the plant, infallibly destroy all insect parasites.

American Rose Society.

EXHIBITION AT BUFFALO, MARCH 17-19.

The spring exhibition of roses is to be held in the Iroquois hotel and here will be the headquarters. The proposition is advanced to make it a free exhibition, in other words, to popularize it to the fullest extent. Buffalo has a large population and Vice-president Kasting is active; his firm will receive any exhibits sent to it. J. Rowland Cloudsley, secretary of the Buffalo Florists' Club, 584 Main street, is appointed manager of exhibits.

Special prizes have come from various parties not mentioned in the preliminary schedule which has been distributed. Various inquiries are coming concerning exhibits. The pot rose class seems to be awake. The rose is the state flower of New York and all amateur growers are invited to take a lively interest for it's "A Rose For Every Home, a Bush for every Garden."

BENJAMIN HAMMOND, Sec'y.

Society of American Florists.

REGISTRATION OF HYBRID ORCHIDS.

Public notice is hereby given that Chas. G. Roebling, of Trenton, N. J., offers for registration the plants described below. Any person objecting to the registration of these plants or to the use of the proposed names is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date.

Hybrid cattleya, Oakland.—A hybrid raised from Cattlyea crispa X C. Hardyana (Young's var.); habit of growth, intermediate between the two parents and very strong growing; flowers of good size and substance. Lip two inches broad and well rounded; color deep purple; throat bright yellow with deep bronze veins; petals 2¼ inches wide, color light pink, veined and mottled like Cattleya Hardyana; sepals one inch broad, also light pink in color.

Hybrid cattleya, Eureka.—A hybrid raised from Cattleya crispa X C. Hardyana alba; habit of growth, much after the style of Cattleya crispa; flowers of good size and substance; petals and sepals are broad and pure white with quite a little of the Cattleya crispa curl to them; lip broad and of a very bright deep color with yellow in throat.

Hybrid lælio-cattleya, Magenta.—A hybrid raised from Lælia tenebrosa X Cattleya maxima; habit, smooth, bulb 15 inches long, single leaved; very like Cattleya maxima but much stronger; flowers large, the same shape as those of Lælia tenebrosa flowers but having a rich magenta color throughout.

W. N. RUDD, Sec'y.

February 5, 1909.

Important Foreign Exhibitions.

May 19-21.—National Horticultural Society of France, annual exhibition, le Jardin des Tuileries, Paris, France. Abel Chatenay, secretary, 1 Rue St. Aubin, Vitry-sur-Seine.

May 25-27.—Temple show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. E. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

Meetings Next Week.

Boston, Mass., February 16.—Gardeners' and Florists' Club, Horticultural Hall.

Boston, Mass., February 20, 11 a. m.—Massachusetts Horticultural Society, Horticultural Hall, 300 Massachusetts avenue. Paper on "American Landscape Architecture," by Prof. F. A. Waugh, Amherst, Mass.

Detroit, Mich., February 15.—Detroit Florists' Club carnation night. Paper on "Carnations," by Thos. F. Browne.

Grand Rapids, Mich., February 15.—Grand Rapids Gardeners' and Florists' Club, Board of Trade Rooms, Pearl street.

Montreal, Que., February 15, 7:45.—Montreal Gardeners' and Florists' Club, Royal Guardian building, 211 Sherbrook street, West.

New Orleans, La., February 14, 8 p. m.—New Orleans Horticultural Society, Kolb's hall, 127 St. Charles avenue.

New Orleans, La., February 14, 2 p. m.—Gardeners' Mutual Protective Association, 118 Exchange alley.

Newport, R. I., February 17.—Newport Horticultural Society.

Pasadena, Calif., February 19.—Pasadena Gardeners' Association G. A. R. hall, East Colorado street.

Philadelphia, Pa., February 16, 8 p. m.—Florists' Club of Philadelphia Horticultural hall, Broad street, below Locust.

Providence, R. I., February 15, 8 p. m.—Florists' and Gardeners' Club of Rhode Island, 96 Westminister street.

Salt Lake City, Utah, February 16.—Salt Lake Florists' Club, Huddart Floral Co., 114 East Second South street.

San Francisco, Calif., February 20.—Pacific Coast Horticultural Society.

Scranton, Pa., February 19, 7:30 p. m.—Scranton Florists' Club, Guernsey building.

Seattle, Wash., February 16.—Seattle Florists' Association, Chamber of Commerce, Second avenue and Columbia street.

St. Paul, Minn., February 16, 8 p. m.—Minnesota State Florists' Association, 510 Snelling avenue, North.

Toronto, Ont., February 16, 8 p. m. Toronto Gardeners' and Florists' Association, St. George's hall, Elm street.

Worcester, Mass., February 18.—Worcester County Horticultural Society, Worcester County Bee-Keepers' Institute.

OBITUARY.

Alex. Von Assche.

Alex. Von Assche, a grower of Elmhurst, N. Y., died February 4 after a lingering illness of nearly two years. He was a native of Switzerland, but came to this country a number of years ago. He was formerly located at Woodside, L. I., but recently removed to Elmhurst. He is survived by a wife and was 39 years of age at the time of his death.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—By a single man 32 years old; 15 years experience; can grow carnations, pot p'ants etc. state wages. Address Key 778. care American Florist.

Situation Wanted—A sober young man aged 22' has experience in carnations bedding and bulbous stock, and who is also a landscape gardener wants a position; can furnish excellent rererence. Key 777, care American Florist.

Situation Wanted—As foreman or manager by an all-round grower; am well up in all lines of the business; 17 years' experience; age 32 and married; American, strictly temperate and capable of giving best results. Address Key 776, care American Florist.

Situation Wanted—By all-around florist; thoroughly understands growing cut flowers general line of pot and bedding plants, also vegetables graduate Agricultural school; six years' experience; best reference; state wages, LOUIS ROCK, 1105 S. 3rd St., Philadelphia.

Situation Wanted—Single man, 28 years old, from Switzerland life experience in every line of gardening; 1½ years in this country, well educated speaks plain English, wants a position private place preferred. Address Y. O. H. F., care Ind. School F M. Youths, Ft. Wayne Ind.

Help Wanted—Reliable man, good grower of roses, carnations and bedding plants; give references in first letter and state wages wanted. F. WALKER & CO., Louisville Ky.

Help Wanted—First class market gardener; one accustomed to growing vegetables in greenhouses and hotbeds. None but first-class man need apply. Address, with references, Key 747, care American Florist.

Help Wanted—First-class market gardener, one accustomed to growing vegetables in greenhouses and hotbeds, with some knowledge of carnations and bedding stock, and able to take full charge of 25,000 feet of glass; married man preferred; none but strictly sober person need apply; references. Key 753, care American Florist.

For Sale—Established wire design manufacturing business; snap if taken at once. Address Key 722, care American Florist.

For Sale—Some good 3 inch pipe guaranteed sound, 6c foot; several small boilers cheap. W. H. SALTER, Rochester N. Y.

For Sale—Vols. 13, 16, 17, 18, 20 21 22, 23, 24, 25 and 28 American Florist; what am I offered? A. L. WHEELER, Florist. 214 S. Adams Ave. Mason City, Ia.

For Sale—5000 feet of glass; no competition; can sell more than you can grow at highest price; write for particulars. DWIGHT GREENHOUSES, Dwight, Ill.

For Sale—An old established, first-class retail store with palm houses attached, in Chicago, south side; reason for selling, other business. Key 659, care American Florist.

For Sale—Greenhouse 6 000 feet glass near center of growing town of 7,000 inhabitants in heart of Rocky Mountains; good trade; no competition; price $4.000. J. H. FREEMAN. Salida Colo.

For Sale—Five greenhouses, glass 16x24, by Lord and Burnham, well stocked with carnations, bedding plants, etc., with nearly new seven-room cottage, heated and running water, two blocks from station in a good growing town, famous summer resort on the Jersey coast; one hour from New York by train or boat; will sell on easy terms JOHN BENNETT, Atlantic Highlands, N. J.

TO LEASE.

Established florists' business in a thriving southern city; 60,000 ft. of glass sale for everything you can grow house well stocked with roses carnations, lilaes, orchids, ferns, palms, etc., which will be sold at a reasonable figure; large plot now under cultivation suitable for truck gardening also six-room dwelling adjoining same; best of reasons for wishing to lease at a low price. Address **Key 773, care American Florist.**

For Sale.

For immediate delivery one No. 6, No. 7, No. 8 Superior Internal Boiler.

Superior Machine & Boiler Works,
125-133 W. Superior St. CHICAGO, ILL.

For Sale.

Secondhand Boilers, Tubular and Firebox shapes. Suitable for hot houses and the like where low pressure is required. Let us know what you want, we have it.

RYAN BROS.,
29 N. Clinton St., CHICAGO.

For Sale.

One second hand Hot Water boiler capable of heating 3,500 ft. 4-in. pipe.

Superior Machine & Boiler Works,
125-133 W. Superior St., CHICAGO, ILL.

Help Wanted.

L. S. Donaldson Co., Minneapolis, will give immediate permanent employment to a thoroughly capable man as manager of their cut flower and plant department. State experience, references, salary last received and other particulars. Address SUPERINTENDENT L. S. DONALDSON COMPANY, Minneapolis, Minn.

FOR SALE.

Established wholesale and retail florist business, consisting of 25,000 feet of glass. This is one of the best places in central New York; everything being nearly new and in first-class condition. Has two boilers either one capable of heating the entire plant. The stock consists of a general line of plants and cut flowers, and is well equipped in every way. Here is your opportunity for a paying business. Come and look the place over and the plant and the books will prove all that I say Would also consider a proposition to rent.

E. J. BYAM, 408-16 Elm St, Rome, N. Y.

WANTED

March 15th. An experienced, energetic gardener thoroughly acquainted with hardy stock, garden making, grading, trimming, etc. Permanent position to right party. State references and salary.

The Elm City Nursery Co.
NEW HAVEN, CONN.

MILLANG BROS., at 41 West 28th Street, New York, announce that Charles Millang has no connection with the firm of Millang Bros.

AUGUST MILLANG.

Baltimore.

RETRENCHMENT ABROAD.

This seems to be a month of ups and downs in all respects—weather, trade, and production. The first factor in business, material for distribution, has been somewhat erratic, a great scarcity one day and a surplus the next. There are a good many social events demanding flowers, plants and decorations, but the scale of expenditure seems as a rule to be brought down to a lower level, and there is a disposition to cut off here and retrench there. Indeed, notwithstanding we are now in what is considered the very height of "the season," there is not the dash and go of former years, but rather some restraining disposition to limit expenditures along the lines of the florists' art. Winter weddings have not been very numerous, certainly not those in fashionable circles which involve heavy disbursements in house and church display. Doubtless the post-Easter season will make amends since the general law of averages seems to prevail in the department of activity just as much as in other lines. Carnations are irregular in supply, some days not enough coming in for the calls. Roses increase in numbers, but the quality is not of the best, with of course, some exceptions. The less important contributions to the general stock, such as freesias, Dutch bulbs, etc., are quite abundant enough.

NOTES.

John Cook, whose position as the first of American rose hybridizers stands unchallenged for long continuance, intelligent devotion and successful results, keeps constantly at his work and has many interesting and presumably profitable experiments in progress. To a layman, the number and variety of his crossings, the patient care with which they are marked and pursued, the great number of roses which he collects from American and European sources, to observe and determine as to their fitness for his tests, makes an accumulation of facts hard to comprehend, but he keeps a clew to the labyrinth clear and undisturbed. It is curious how his popular rose, My Maryland, is throwing sports. He has two already which are much darker in color and fuller in substance than the type; and stranger still, another whose color is lemon yellow. Notwithstanding his years and an occasional rheumatic twinge, Mr. Cook keeps about and active and joins the occupations of a sound mind to those of a well preserved body.

Robt. Carll of the Florists' Exchange is at last recovering from his long fight with blood poisoning, after the removal of the large piece of glass embedded for years in his arm.

There is no change in the condition of Mrs. Schuler-Thomas.

S. B.

Los Angeles, Calif.

Many street corners in the busy section are occupied by fakirs with large quantities of violets which they sell at five cents per bunch and almost every lady you meet has one or more bunches pinned on.

Howard & Smith, whose main plant is at Montebello, with a branch at Ninth and Olive streets, this city, have a fine lot of specimen palms, principally kentias. They now have five acres under cover, mostly slat houses, at the Montebello plant and not a scale to be found on the whole place. This place embraces 35 acres located at the foothills where they are sheltered from the north. They have a very large collection of hardy plants among which their dahlias and irises are among the finest in the country.

Frank Warner in charge of the Palm Nursery in Oneonto park reports business good. They have some large contracts for specimen acacias, camphors and palms for lawns and boulevards; a fine lot of azaleas on this place bid fair to do well for Easter.

The Redondo Floral Co. is displaying a fine lot of plants in its roomy Spring street store, and has been kept on the jump lately with funeral work.

The Germain Seed & Plant Co. is making its usual window display which attracts so many tourists, and reports a very favorable season.

PACIFIC.

GALAX, FERNS, LEUCOTHOE

Chicago.

WEATHER CUTS DOWN SUPPLY.

The demand has been somewhat affected by the bad weather, but receipts have also diminished. Considering everything, however, trade has been very good. Retailers generally report a better business, with an improving demand and a little more willingness on the part of buyers to pay the price. There have been indications the past few weeks of an improving wholesale trade also, although prices here are little affected. American Beauty roses are very scarce; the long stems are of fair quality, but medium and short are generally poor. Other roses are very fine, and plentiful enough for the slack demand existing early in the week. Some of the finest Cardinal ever seen on this market are now coming in. Carnations, affected by the weather are not very good; the better grades cleaned up well, but the poorer grades moved slowly. Bulbous flowers are coming in quantity and are slow sale. Lilies are in very good demand, the supply having shortened up somewhat. Violets have not been nearly so numerous as during the two previous weeks. The ups and downs of the violet business have been considerable this season with more downs than ups. There has been some inclination to criticise the growers for unloading large lots on this market when sales have been slow in the east and then seriously curtailing shipments when the eastern market improves again. Some believe it within the power of Rhinebeck growers to control the distribution to better advantage to all concerned.

Orders for Lincoln day have been coming in well and this with the usual demand for St. Valentine's day is expected to create a good, stiff market for the latter part of the week.

FLORISTS' CLUB MEETING.

The regular monthly meeting of the Florists' Club took place Thursday evening, February 4, with a very good attendance. The newly elected officers were formally installed, all of which were present excepting T. E. Waters. On taking the gavel, President Asmus made a speech outlining his plans and hopes for the work of the club, suggesting among other things that there be a topic of live-interest to the trade up for discussion each meeting.

Perhaps as interesting a ceremony as any was the presentation to the retiring president, Leonard Kill, of a token (a beautiful watch charm), in recognition of his services the past year to the club.

A. T. Hey, president of the Illinois State Florists' Association spoke of the work of that organization and of its plans in furtherance of the floricultural interests and urged that members of the club make an effort to attend the Springfield convention, February 16-17.

The following were elected members: Robt. Lange, 1912 N. Whipple street; H. A. Olson, 3136 North Robey street. The following were nominated for membership: Geo. Ambrust, Oak Park; Chas. Zapfl, 753 Thorndale; R. F. Simons, 848 W. Harrison; F. Merker, 1603 W. Twenty-second street; Chas. Bemish, 45 Wabash avenue; Chas. S. McCauley, Geneva; Emil Maerz, 242 N. Winchester; Paul Kubish, 45 Wabash avenue; F. Ayers, 396 Ontario street; F. Haage, 718 N. Leavitt street; F. Krause, 62 Racine avenue.

The following committees were appointed by President Asmus:

Bylaws: A. T. Hey, H. B. Howard and L. Coatsworth.

Finance: H. N. Bruns, J. F. Klimmer and Walter Scott.

Transportation: P. J. Foley, August Poehlmann and A. T. Pyfer.

Good of the club: Ed. Enders, Frank Pasternick and A. F. Longren.

Sports and pastimes: David Erickson, chairman.

HORTICULTURAL SOCIETY OF CHICAGO.

The special meeting for the election of a secretary took place at the Art Institute February 9 at 3 o'clock, President Kelley in the chair. There were two candidates, J. H. Burdett and N. P. Miller, the majority of the ballots going for the former. It was unanimously decided to present the silver medal of the society to the retiring secretary, E. A. Kanst, who has so long and faithfully served the organization.

NOTES.

Winterson's Seed Store has its new retail seed and plant catalogue ready for distribution.

W. L. Herendeen, the boiler man of Geneva, N. Y., was in town last week.

The Poehlmann Bros. Co. is growing a fine lot of Bon Silene roses.

THE RETAILERS' WINDOWS.

The combined attraction of the nearness of St. Valentine's day and the hundredth anniversary of Lincoln's birth gave the retailers a fine opportunity to give distinctive and attractive window displays. A few of the more prominent down-town effects are noted below:

Friedman had a most novel and distinct decoration. In his Michigan avenue window was a perfect model of a log cabin with logs and other country appliances around in apparent carelessness but really a carefully thought out, effective and excellent piece of work. A portrait of Lincoln, embowered in Asparagus plumosus was the chief feature of the Van Buren street window.

Fleischman's two fine windows had, as the leading features, portraits of Lincoln and Washington, one in each, framed in gilded leucothoe leaves while around were American flags well displayed and choice orchids, lilies and other stock. The excellent arrangement precluded anything like stiffness, while the whole tone of the windows was dignified and quite apropos of the occasion. It was simple, yet ornate and effective and a great credit to all concerned.

Harry Rowe had a very effective window made of heart-shaped violet boxes of various patterns, baskets and boxes of cyclamens, also well flowered azaleas in baskets. A very elaborate basket consisted of Azalea Vervæneana, Dracæna terminalis and mahonia with Asparagus plumosus interwoven with the high handle. A very pretty new fern dish of cut glass was also in this window, showing the so called Japanese air plants together with embalmed adiantum and pteris, something of a novelty in the way of preserved plants.

John Mangel's principal window was composed of a bronze bust of Lincoln framed in a large wreath of bronze leucothoe. A window across the doorway from this was of miscellaneous orchids, freesias, etc., and the broad side window was of American Beauty roses and large plants of Cibotium Schiedei.

A. Lange's window was a very attractive display with a dwarf magnolia in full bloom as the central feature. Pansies and violets were also a prominent feature suggestive of St. Valentine's day. His special $1 box of cut flowers, this time of carnations and greens, was also there. Above and over all was a huge American flag suggesting in its own way that this is Lincoln week.

Canger & Gormley, feature a large heart of red immortelles pierced through with an arrow of the same color. This heart is illuminated at night with tiny red incandescent electric lights. Around this was a general display including a most effective basket of white La Reine tulips and Spiraea Van Houttei (the so called bridal wreath).

The Bohannon Floral Co. showed a huge heart in outline made of red, heart-shaped violet boxes framing the portrait of Lincoln. Aside from this the window showed a general display, but a very dainty and effective valentine basket was of violets suspended from violet cord with three bows of violet gauze ribbon.

QUICK ACTION IN EMERGENCY.

At 4:30 o'clock on the afternoon of January 18, the Kroeschell Bros. Co., received a long distance telephone message from a Milwaukee florist to the effect that his boiler had given out and that his entire stock of plants was in danger of freezing. In spite of the lateness of the hour a new boiler was immediately loaded on a wagon and put on board a boat sailing that same night. It arrived in Milwaukee the next morning by 4 o'clock and within 24 hours of the original telephone message was in place and ready for firing. W. L. Kroeschell avers this is but one incident in several similar cases this winter.

VARIOUS NOTES.

The eastern end of Jackson boulevard would seem to have a great attraction for florists. We have Fleischman's magnificent store in the Railway Exchange building. Friedman, we are credibly informed, is moving to what is now a barber's shop, just opposite, owing to his lease being nearly out at his present location, while on the northeast corner we notice there is a store to let "with special inducements to a florist," to say nothing of the Eaton Flower Shop, a block or so farther west.

The J. B. Deamud Co. reports that ferns are keeping well in cold storage and expresses the belief, that, in spite of former rumors to the contrary, that there will be no shortage this spring.

Bassett & Washburn are cutting a fine lot of Bride and Bridesmaid roses, of a grade they exhibited last year at the rose show.

Schnell & Poppe, of West Madison street, have dissolved partnership by mutual consent, C. A. Schnell continuing the business.

Anton Then and a party of enthusiasts were noticed taking in the sights at Poehlmann's plant at Morton Grove last week.

The Kennicott Bros. Co. is receiving Klehm's line of novelty tulips.

Wietor Bros. are propagating heavily both roses and carnations.

The supply of Boston ferns and small ferns is very short.

John Zech, of Zech & Mann, has become a grandfather.

Illinois State Florists' Association.

FOURTH ANNUAL CONVENTION.

The fourth annual convention of the Illinois State Florists' Association will be held at Springfield in Arion hall, Fourth and Jefferson streets, February 16-17. The programme will be as follows:

TUESDAY AFTERNOON SESSION.

Introductory Remarks, by Hon. John T. Hay, Springfield.

Address of Welcome, by Roy R. Reece, mayor of Springfield.

Response, by Geo. Asmus, president Chicago Florists' Club.

President's Address, Albert T. Hey.

Secretary's Report, J. F. Ammann, Edwardsville.

Treasurer's Report, by F. L. Washburn, Bloomington.

Report of Secretary of Advisory Committee, by W. N. Rudd, Chicago.

Address "Our Floricultural Interests Can Be Advanced and Why it Should be Done at State Expense," by E. Davenport of the State University.

WEDNESDAY MORNING.

Address "School Gardens," by Prof. J. H. Collins, superintendent of Springfield public schools.

Address "Our Experiment Station," by Prof. H. B. Dorner.

Address, "A Few Carnations I Have Seen," by W. N. Rudd.

Unfinished business—New business—Question box.

Election of officers.

On Tuesday evening members of the association will be the guests of the Springfield Florists' Club at a banquet to be given at the St. Nicholas hotel at 8 p. m. The local club is making very great preparations for this event and straining every nerve to make it the best of the meetings yet held. Exhibits from cut flower growers and florists' supply houses will undoubtedly be a prominent feature, and those who have not yet done so should make immediate application to Secretary J. F. Ammann, Edwardsville, Ill.

Louisville.

TRADE FAIR.

Business conditions the past week were fair, everything considered. Roses are of good quality and in fair supply, the demand being good. Carnations of good quality sell very satisfactorily and are in almost adequate supply. Violets, lily of the valley, mignonette, etc., are in good supply and find some demand. Freesias can be had in good quantities of good quality and find a satisfactory demand. Narcissi and Roman hyacinths can be had in fair quantities of good quality and find a fair demand. There are quite a number of tulips on the market and they find a good demand. Other bulbous stock can be had in fair quantities and finds a satisfactory demand. Green goods are a little scarce, with the exception of smilax, which is plentiful. Rhododendrons, azaleas and other flowering plants are on the market and find a satisfactory demand.

FLORISTS CLUB MEETING.

The regular monthly meeting of the Kentucky Society of Florists was held at Fred L. Schulz's store with one of the best attendances in the history of the society. This was probably due to the scheduled rose and carnation exhibition, which was a great disappointment, there being but one exhibit from a distance. This was Carnation Lucille, which created a very favorable impression. The bloom was very large, well formed, had a good stem, was nicely colored, and kept well. We are taking it for granted that we did not have more owing to the Indianapolis meeting being so close to our's. However, March will see another meeting and we will be greatly pleased to have some exhibits at that meeting.

Reynolds & Struck exhibited a freak calla, there being two blooms on one stem, one of them partly green. They also exhibited some very good blooms of White Enchantress. Robt. Miller exhibited a very fine seedling cyclamen. He also gave a little talk on how the seeds are procured, which was very interesting. Markmeyer, Jr., of Markmeyer & Son, the pottery people, was present, and, at the request of the society, explained that pots could be bought locally as cheap as anywhere, contrary to the report originating locally that we could buy them cheaper about 1,000 miles away. Mr. Markmeyer is a member of our society and we felt we owed him the privilege of defending himself, especially as the report originated from a non-member. Our society was organized to promote the industry and we would like to have a few more discussions, as everyone will receive a square deal.

Mrs. E. Lang, formerly with Jacob Schultz, F. Walker & Co., and Miss Miller, is now with Henry Fuchs.

F. L. S.

St. Louis.

STOCK PLENTIFUL.

The weather the past week was warm and springlike and flowers arrived in large quantities in the commission houses. Even roses, which have been scarce, have become plentiful. Violets have been very plentiful. Bright weather has increased the supply. The down-town stores are now in their glory with cheap signs, but they no longer have the monopoly as these fakir signs adorn the windows as far west as Thirty-ninth street. Jonquils and daffodils are more plentiful, in fact, everything fortells a glut as the crops seem to be on everywhere.

NOTES.

Geo. Angermueller is now receiving a fine lot of bulbous stock and roses and a large quantity of fancy carnations. Al. Guny, of this place, visited De Soto, and while there inspected the greenhouses of G. M. Thost and Hibbert Floral Co. He found both of these establishments in a very flourishing condition.

Paul Scheider, who recently had a fire, was again in trouble. During the heavy storm last week, his boiler burst and a house of fine Boston ferns were entirely frozen. Paul will get a new boiler and will build two houses instead of one. He is determined to rise again notwithstanding his hard luck.

The Horticultural Society will hold its third annual spring exhibition at the

Greenhouses, NEW CASTLE, IND.

Grand avenue masonic temple, Grand and Finney, March 24-26. There will be music and Otto G. Koenig, secretary, promises a splendid show.

The Ellison Floral Co. will have a beautiful annex to the store. The greenhouse, which is nearing completion, will be stocked with the finest foliage and flowering plants the market can afford.

Schaeffer Floral Co., 111 North Sixth street, with Julius Schaeffer, manager, will open up February 8. They will have a fine store; fixtures all white. Julius was formerly with Grimm & Gorley.

Will Osseck has come down to the store but will have to use crutches for some time. Will Smith is glad to see him as the work was heavy for one man.

J. W. Dunford reports from the recent blizzard he suffered severe losses. his lilies and azaleas being entirely froze out.

Alex Siegel furnished several thousand carnations at the opening of Penney & Gentiles' dry goods emporium.

Chas. Schwake of New York was with us last week and disposed of plenty of bulbs and nursery stock.

The Gallagher Flower Shop has closed up as it proved to be no longer a profitable venture.

Young & Sons' window is well filled with primroses, tulips and other bulbous stock. W. F.

KEARNEY, NEB.—Fire was discovered by railroad men in the greenhouses of Green & Wiley on Railroad street and Second avenue, January 29. The blaze originated in the back of the house which contained the heating plant and it is not known just what the cause of the fire was. The department was called but the blaze had a big start in the dry woodwork and the large shed and three of the five greenhouses were badly burned and a great deal of the glass broken. The two houses on the west were not injured. On account of the severity of the weather a large number of plants were destroyed although not damaged by fire or water. H. C. Green and wife have the sympathy of the community in their loss as they have had exceedingly bad luck during the past few years.

STOCK SHORT AND PRICES HIGH.

A man who can see the humorous side of the cut flower business would have been greatly interested during the past week. The retailers, who have been buying stock practically at their own figures for the past year, were suddenly brought to a realization of the fact that good stock was very scarce. Consequence, agony and mournful howls. Early in the week special American Beauty roses went up to $1 each, but, as a leading wholesaler put it; "they might as well be $4 for there are none coming in." It is two years since there has been such a scarcity of good stock. During all that time we have felt it a duty to exploit the sad condition of growers and wholesalers. At present, the retailers are calling for sympathy. They say that they can't get any higher price for flowers than formerly; that business is dull and, to cap the climax, they claim that the wholesalers, or some of them, continue to do a retail business, all of which will be threshed out at the coming meetings of the various organizations supposed to exist for the elevation of horticulture. There has been a marked advance in the prices of all roses, carnations and bulbous stocks. It seems a strange turn of events, that orchids are about the only staple stock of importance, on which the price has not, to any great extent, been raised. There is little change in violets, but, as we pointed out last week, violets are not now among the exclusive stocks, for the reason that they are practically in the hands of the street men.

The weather during the latter part of the week was much warmer and there was a perceptible increase in some stocks. Roses continued scarce but there was a larger supply of carnations and bulbous stocks than there had been earlier in the week. Tulips, yellow narcissus N. poeticus and freesias are now arriving in fair quantities as it seems that with the possible exception of roses, the market will be well supplied by St. Valentine's day.

February 8.—The weather is fair and mild, conditions that promise a great increase in the supply of stocks by the middle of the week. Already, there is a perceptible increase in the supply of minor stocks, with a tendency toward lower prices. The rose supply is yet short and prices are firm. Violets have advanced a few points.

NOTES.

On the night of February 6 a fire at the range of Louis Dupuy, Whitestone, L. I., destroyed the potting shed and did minor damage to the greenhouses. Fortunately the fine Easter stock of roses and other plants was uninjured, being in another range. The fire was supposed to have originated from a defective electric light wire. The loss is partly covered by insurance.

W. W. Burnham is now with Abrahms & Strauss, of Brooklyn, as general manager, receiving, it is said, a liberal advance in salary over his former position at Bloomingdales. He was presented, February 6, at his home with a very handsome sterling silver tea service by a number of the concerns with whom he did business while at Bloomingdale Bros.

F. W. Smythe of Wadley & Smythe sailed last week for Europe to be absent about six weeks. On the eve of his departure he gave a dinner to his numerous employes. The good wishes of his staff and many other warm friends will follow him in his jojurneying. In the meantime, manager John Armstrong of the store is, as usual, a very busy man.

Kessler Bros. have now got their store at 50 West Twenty-eighth street, well fitted up for business. The senior member of this firm was for a number of years with John J. Foley and for the past six years with Miss Carroll Macy, both well known retailers. They will make a specialty of plants.

M. Durand, an enterprising young man who has had long experience in the florist business, has recently opened a retail store at 1326 Lexington avenue. He is well prepared to accommodate his customers and will doubtless make a success of his venture.

Very noteworthy among the offerings in roses during the past week, were extra finely flowered and long stemmed Richmonds, handled by J. A. Millang of the New York Cut Flower Co. and grown by Adolph Farenwald, Roslyn, Pa.

Chas. Millang requests us to state that the report published in an alleged trade paper, that he will open a "plant market," is erroneous.

Henshaw & Fenrich, among other good offerings, are now handling an exceptionally fine line of pink tulips.

Visitor: A. N. Pierson, Cromwell, Conn.

New York Florists' Club.

MONTHLY MEETING.

The regular monthly meeting of the Florists' Club was held in the Grand Opera House building on the night of February 8, President Hallock in the chair. It seems like an indorsement of the newly elected officers of the club that, "standing room only" prevailed. In addition to the great attendance of club members, the following notable visitors were present: Albert Roper, Tewksbury, Mass.; Joseph Heacock, Wyncote, Pa.; Adolph Farenwald, Roslyn, Pa.; E. A. Stroud, Stafford, Pa.

It was carnation night, and the title was well sustained by the variety and excellence of the exhibits. For their untiring efforts to make the meeting and exhibition a success, due credit must be given to Secretaries John Young and Harry O. May. C. W. Scott spoke in the interest of a bowling team. He asked the chair to appoint a committee on bowling, his request being complied with by the following appointments: C. W. Scott, J. A. Manda, J. A. Shaw, Joseph S. Fenrich and John Donaldson. Patrick O'Mara spoke on the question of bowling. He said, in substance, that if the bowlers in the club desired to go ahead and make a record they should organize and do so, without falling back on the club for financial support.

H. L. Jones was elected a member of the club. He was called to the platform and made a brief address, pledging himself to work for the welfare of the organization. Morris J. Jacobs was nominated for membership. Henry Reynolds tendered his resignation as a member of the club. Announcement was made of the death of W. C. Kriek of 1164 Green avenue, Brooklyn, N. Y. Mr. Kriek was one of the oldest members of the club. The members of the dinner committee made an urgent appeal to the members of the club to come to the support in making the annual dinner, at Shapley's February 27, a grand success. S. S. Butterfield, who attended the carnation convention and exhibition at Indianapolis, made a comprehensive address, covering his experience. Among other good things he said: "When the staging of the flowers was finished, the hall presented one of the most beautiful pictures it was ever my good fortune to see." He said that in his opinion there was never before, gathered together under one roof, such an aggregation of carnations, "in fact," said he, "I do not think that anywhere in the world has there ever been such a collection of high grade flowers shown as were seen at Indianapolis." He told several amusing anecdotes of the trip and his stay in Indianapolis.

F. R. Pierson of Tarrytown, also spoke on the carnation convention, which he attended. He gave high praise, not only to the exhibits, but to those who had the arrangements for the exhibition in charge. Brief but interesting remarks were made by Joseph Heacock, Albert Roper, Adolph Farenwald, E. A. Stroud and various members of the club.

THE EXHIBITS.

Seldom have the members of the club been treated to such a fine display of flowering stock. Though carnations predominated there was enough of other stocks to lend variety. The following were noted: Carnations, Alma Ward by C. W. Ward, Queens, N. Y.; Juanita by Fillow Flower Co., Westport, Conn.; Bay State by Albert Roper, Tewksbury Center, Mass.; Mrs. Pfeuffer (variegated) by O. V. Zangen, W. Hoboken, N. J.; Dorothy Gordon by Jos. Heacock, Wyncote, Pa.; White Seedling by A. Wynne, Stamford, Conn.; Pink Seedling by R. P. Jeffry & Son, Bellmore, N. Y.; Lucille by A. F. Longren, Des Plaines, Ill.; Gov. Deneen (maroon) and Sangamo (light pink) by A. C. Brown, Springfield, Ill.; Enchantress, Harry Turner, Port Washington, N. Y.; Beacon and Afterglow, Pittsburg Rose and Carnation Co., Pittsburg, Pa.; Pink Pearl, W. A. Manda, S. Orange, N. J.; Begonia Sp. E. India, W. A. Manda; new variety of nephrolepsis by George Gitras, W. Hoboken, N. J.; carnations, Winsor (light pink) and Lady Bountiful by E. A. Stroud, Stafford, Pa.; Mrs. T. W. Lawson, Val. Hamman, Summit, N. J.; Seedling, Enchantress Harlowarden, S. J. Trepess, Glen Cove, N. Y.; Neptune, Phil Thompson, W. Hartford, Conn.; Red Seedling, C. T. Guenther, Hamburg, Pa.; Rose, My Maryland, S. J. Reuter & Son, Westerly, R. I.; Improved Sprinkler, O. V. Zangen, West Hoboken, N. J. In the competition for the prizes of books offered by Alfred H. Langjahr the awards were as follows: To Alma Ward, first; Enchantress, by Harry Turner, second; Mrs. Lawson, by V. Hamman, third. The March meeting of the club will be rose night. Chairman Nugent of the house committee was on hand with several roast fowls, also liquids.

Detroit.

The Florists' Club will hold a trade exhibition of carnations on Monday evening, February 15, and all disseminators of novelties in carnations, roses or other stock are invited to send samples of the same for exhibition. The local trade will be well represented and many visitors are expected from adjacent districts. All shipments should be made in time to reach here on Monday, and should be addressed to the Michigan Cut Flower Exchange, 38 Broadway.

STOCK STILL SCARCE.

The scarcity of stock is still the feature of the market; anything worth having in almost all lines had to be almost fought for, the past week. Exceptions may be noted in bulbous flowers and violets of which there seems to be sufficient for the demand. The rose situation is singular for with all the added area of glass of the past three years there is, and has been for the past two or three weeks, a great scarcity of all varieties. Growers make the most meagre shipments amounting to only 20 or 25 per cent of their normal consignments. American Beauty, and in fact, all special grades of other varieties are almost all sold before they reach the market. This situation has caused an advance in the prices. Anything salable in the teas brings $10 per 100 and prices range from this to $20-$25. Carnations have also been in demand far above the supply. On last Saturday there was not a bunch of white to be had in any commission house in the city, scarcely any of any other color. Prices were boosted, $6 being asked for the best on Monday last. If there is not some relief before Saturday of this week there will be some tall hustling for stock to meet the Valentine's day demand. Violets are more plentiful and do much to relieve the situation. Cattleyas are still in good supply, but they have become so popular that they move out in a manner quite gratifying to the dealers, 50 cents straight is the price. Freesia, lily of the valley, tulips and daffodils are seen in quantities and are good sellers as are also sweet peas which, while a little off for a week, are now more in evidence. The scarcity of flowers seems to be general in the section of country that depends on this market for supplies, and commission men have a great time in filling out-of-town orders satisfactorily. Growers say now that they think the worst is over and as the days lengthen the cuts will be much heavier. The supply of flowering plants is quite up to the standard and much choice stock is seen. Harris is sending in fine azaleas, rhododendrons, hyacinths, tulips and daffodils and some novelties such as flowering apples and Ghent azaleas. Becker also has fine azaleas.

NOTES.

The H. A. Dreer Beneficial Association for the employes of the nursery department was organized last week. The following officers were elected: J. J. Flynn, president; Arthur Boyle, vice-president; H. Betz, secretary; Atkinson Lloyd, treasurer. As an inducement to join, the firm paid the entrance fee of $1 for those who would become charter members; 87 men embraced this opportunity to get together for their protection. Benefits are $5 per week for sickness and on the death of a member his heirs are paid $50. The dues are 25 cents per week. George A. Strohlein, of the Dreer Co. arrived on the steamer Patricia from a European tour in search of novelties. He brings back some good things which will be offered in the near future.

W. K. Harris has purchased the stock of the new fern, a sport of Boston raised by the Wm. Graham Co. There have been so many variations of this old favorite that new ones are looked at askance, but this is quite different, and when such a good judge as Wm. K. Harris thinks it good enough to add it to his collection it must have merit. Probably as good a description of it that will convey to those who have seen the new tasseled Scottii would be to call it a tasseled Boston, the pinnæ being divided like the new Scottii. The fronds are flat and graceful and do not bunch up as in N. Whitmani and N. todeaoides.

Leo Niessen thinks one of the functions of the florists' clubs is that of posting the general public on all the good things in flowers and by the aid of strong committees sending out educational matter to the public press. In this way, he thinks much good and useful information could be disseminated that would help the amateur and redound to the good of the business. The Leo Niessen Co. is making a hit with Acacia pubescens; this is one of the choice things of the season and is in great demand.

Wm. McKissick is making a specialty of tulips and other spring flowering bulbs. He reports good advance orders for Valentine's day.

There are a number of bidders for the Wm. Graham store and business in Germantown, but as yet, it is still in the market.

Colflesh is strong on Primula obconica as is also Zimmer, while Meckey has his usual fine assortment of daisies.

K.

Boston.

STOCK SHORT.

We have had two weeks of steady business. The market is in no position to deliver any quantity of the desired varieties of stock, but the general scarcity is felt only slightly. With normal business conditions to meet, the situation would be more serious. Prices have held well and stock has been coming in better. American Beauty rose is selling well at $6-$9 per dozen. Chatenay has not appeared in its usual form this season and is not dependable. Bridesmaid of ordinary quality is coming in plentiful but there is nothing savoring of superior value. Bride is laboring under difficulties and is considered only as a working rose. The supply of carnations has dropped off. Violets are abundant and the prevailing price is $6 per 1,000. Bulb stock is plentiful and prices have dropped owing to the great volume being marketed. Spring flowers, of which there is a varied collection of many types, are proving most popular just now in boxes of assorted selections. Hardy azaleas and acacias are lending much attraction to the plant collections which is well filled with the usual early spring favorites.

NOTES.

The exhibition conducted under the direction of the directors of the Boston Flower Market to be held February 27-28 at Horticultural Hall, will be one of the best ever held in this city. The committee in charge is busily engaged in perfecting the arrangements and has secured a list of exhibitors which assure opportunities for witnessing the best collection of high grade commercial flowers in the pink of perfection. The display is not confined to local growers alone, as the leading growers throughout the country have been invited, and a large number have already expressed a willingness to show their specialties. A substantial number of prizes has been guaranteed and being open to the public Saturday and Sunday, the exhibition is bound to be well attended.

John Fee, the peer of tulip growers, whose products have attained considerable renown, has opened his short season with a splendid collection of La Reine tulips. Murillo which is his leading specialty is expected next week and will be rapidly followed by a varied assortment of the leading varieties. The amount of stock annually marketed from this minute plant is remarkable.

Mann Bros., the Easter lily specialists, are cutting a strain of the best blooms seen in this city for many months. They are showing longiflorum in its true form allowing no comparison with the other substitute on sale. While at the height of the smaller bulb business, it is easily seen that the leading product of this immense establishment has not been neglected.

W. Sim is in his element again and is distributing a beautiful line of sweet peas which the market is eager to take advantage of.

Funeral work as may be seen at both the Galvin stores is the principal business of the day.

B.

Massachusetts Horticultural Society.

LECTURE ON EFFECT OF PLANT FUNGI.

Professor B. M. Duggar of Ithaca, N. Y., gave the John Lewis Russell lecture before the Massachusetts Horticultural Society January 30, 1909, his topic being "The Effects of Conditions of Growth in Certain Horticultural Plants upon Susceptibility to Fungous Diseases." There was a large attendance of members. Professor Duggar said that great advances have been made in our knowledge of fungi. He outlined the relation between the weather and parasitic diseases of plants, and said that 10 days of continued damp and rainy weather has often destroyed crops of fruit and vegetables, although some other crops thrive on such weather. Fungous diseases in many cases depend on the wounds caused by previous fungous attacks. In studying the action of fungi upon growing plants we are met with a remarkable diversity. Certain fungi, such as rusts, white mildew, etc., appear to be able to attack the healthiest parts of growing plants. These, however, do not kill the tissues of the growing plant, but themselves die as the tissues of the plant die. Contrasted with these are such fungi as leaf spots, fruit decay, etc., which do kill the tissues. It has been asserted by many that the vigor of the plant is a protection against infection from plant disease. Yet in some cases it is found that the vigorous plant is particularly susceptible to forms of parasitic fungi.

The black rot of cabbage is a parasitic fungus, but in order to spread there must be water connection between the outside and inside of the plant. This is established by the drops often seen on the edges of the leaf. Water is most important in its relation to the growth of parasitic fungi. To combat fungi care must be exercised in watering plants. The factor of light is also most important. Experience has shown that

plants subject to powdery mildew are benefited by giving half shade. Alkali or acid in the soil also are conditions affecting fungi, as well as the growth of plants. The cabbage, for instance, thrives best in an alkaline soil. It is not easy to correct these conditions, but they must be considered. Where plants are living on one another there is parasitism, but any treatment of parasitism must take into account conditions of soil, water, temperature and light.

Washington.

STOCK PLENTIFUL.

This city has enjoyed a week of lovely spring weather, which has caused an over abundance of cut stock. Jonquils, tulips, and other bulbous stock are plentiful. There are also quantities of Lilium Harrisii, callas, sweet peas, violets, carnations, roses, etc. American Beauty rose is very scarce, and the wholesalers get whatever they ask for the flowers. All the retailers are preparing for Valentine's day, as it is expected that there will be a great demand for flowers, especially violets and lily of the valley.

FLORISTS' CLUB MEETING.

The regular monthly meeting of the Florists' Club was held at Eagle's hall, Sixth E street, Tuseday night. The main business of the meeting was the report of the secretary on the results of the flower show and nomination of officers. The secretary reported a satisfactory profit from the annual show, which news was greatly appreciated by the members. The officers were re-elected as follows:

F. H. Kramer, president.
John Robertson, vice-president.
Wm. Gude, treasurer.

Secretary Geo. C. Shaffer declined the honor of renomination, and Jas. Carberry, and Oscar Oehmeler were nominated to fill the office. Geo. H. Cooke was nominated as a director for two years and Jas. Carberry and Theo. Diedrich for three years.

President Kramer, speaking for the members, congratulated Wm. Gude on defeating his opponent for the presidency of the chamber of commerce, and remarked that with Mr. Gude president of the chamber of commerce, and J. H. Small, president of the board of trade, we ought to feel proud of the florists. Mr. Gude in return spoke feelingly, remarking that he was glad that he was a florist, and president of the chamber of commerce, and that he was always only too glad and willing to do something for the benefit and interest of the Florists' Club; he told in detail how it came about that he was nominated and elected to his office. It was suggested that the club hold its annual banquet, as usual, one month after the election of officers.

NOTES.

Chas. Maynadier of the Propagating Gardens has just been granted a patent on his new carnation mender. It is a single device which is stuck in the calyx of the split carnation, mending it so neatly that the artificial part cannot be detected. It is made of a thin piece of cardboard scalloped same as carnation calyx and dyed its exact color. He expects to put it on the market in a few weeks.

Geo. H. Cook was busy this week on eight centerpieces, of Theo. Diedrich's new sweet peas, which were to be used at a luncheon at Senator Dupont's. He also had a poinsettia centerpiece for the Alabi club.

Choice Assortment of Cut Flowers will be found here.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

HENRY F. MICHELL is at Pinehurst, N. C.

VISITED NEW YORK.—A. J. Brown, Grand Rapids, Mich.

W. ATLEE BURPEE has gone to the Bahamas for a winter vacation.

BERMUDA reports good growing conditions for the lily crop up to January 28.

THE Agricultural Experiment Station of Tucson issues, in Bulletin 77, valuable information regarding cantaloupe growing.

THE Ebbert Seed Co., of Rocky Ford, Colo., calls attention to the fact that it is in no way connected with the Gobin-Ebbert Seed Co., recently sold.

GEORGE D. KARSNER, a farmer of Fayette county, Kentucky, has been appointed inspector of seeds for the state. His new position carries a good salary.

CHICAGO—The onion set market remains strong at about $3 for white; red and yellow, $2—Contract prices on the board of trade February 10 for grass seed were noted as follows: Prime timothy, $3.80, white clover, $15.—Visitors: Chas. Loechner, representing the Yokohama Nursery Co., New York.

THIRTY ACRES of onions planted for seed on Sherman Island, Calif., are reported washed out: there are other minor damages on low seed-growing lands in the Santa Clara district, some lettuce must be resown, and standing water on some onion fields may check their growth. Water and wind have also done damage at Hollister.

A SUIT is now on trial in the superior court in which the Robt. Buist Co. of Philadelphia sues the Goodwin Harries Co. at Chicago for a certain lot of Admiral peas sold at a reduced price under the term "old," but which later on were never delivered and the latter firm declined to pay for because of almost entire lack of vitality. The case will be concluded this week.

TOLEDO, O.—Clover seed shipments last week failed to keep pace with receipts by nearly 150 bags. The outflow from the local market has been comparatively heavy, despite this fact, but enormous stocks continue a drag on the situation from the bull standpoint. This week 3,610 bags were received, against 3,680 last week and 717 for the same week a year ago. For the week, shipments were 3,479, compared with 4,685 the previous week and 2,787 for the week a year ago. At this time last season stocks had dwindled down to almost nothing and shipments were heavy despite the record prices.

Grass Seeds.

ED. AMERICAN FLORIST:—

My attention has been called to an article that was published in a Chicago paper December 10, 1908, under the head of "Grass Seeds," quoting from a circular issued by Conrad Appel of Darmstadt, Germany, casting a reflection upon the American seed dealers and exporters. Those who are well posted in the business will pay no attention whatever to remarks of this kind coming from such sources, but there are others who might take this statement for a fact, inasmuch as it has been published by a reputable journal.

In my business experience—which has extended over quite a number of years—I have never yet found the time that it was not possible to secure a supply of true Poa pratensis or Kentucky bluegrass seed. I have also found that complaints, similar to the one made by Conrad Appel, are made based upon some transaction, which if thoroughly investigated, would put an entirely different color to the situation, and more than likely the shoe would be on the other foot. Quite frequently the price at which the goods are sold has more to do with the transaction than the quality. As a matter of fact, I will state that the party in question, or anyone either in the foreign or home trade, can secure from the American dealers as high a grade, not only of Kentucky bluegrass, but of all other seeds, as it is possible to secure in any of the markets of the world; but the proper way to secure these qualities is not to go at it like some of our foreign buyers and shop around and place the order at prices known to be lower than the American trade was paying for the highest grades.

As a rule it is not possible for the buyer of any commodity to secure the highest qualities at prices quoted for the lower grades. A little care on the part of the buyer is all that is necessary to be exercised and there will be no occasion for any blanket statement as this gentleman has used in his circular.

ALBERT MCCULLOUGH.

Cincinnati, O.

Vitality of Seeds.

Causes which Affect the Vitality and the Vital Energy of Seeds" was the title of the address given by W. Michaud at the meeting of the Canadian Seed Growers' Association at Ottawa, February 4-5. The speaker explained in a most interesting paper what was understood by these terms describing the germination and the factors to be considered, and saying that "to germinate under ideal conditions seeds must possess the inherent vital energy common to any life organism, the nature of which is still an open question to the scientific world," the ideal conditions for germination being "the presence of water, heat and oxygen in a certain proportion, which proportion is different for each seed." Describing the natural causes affecting the germination of seeds, Mr. Michaud noted the degree of maturity and the duration of the period of rest necessary for the different kinds, and the different individuals of each kind, going on to tell of the experiments at the Chicago University.

The question as to how long seeds keep their vitality was interestingly discussed, and the various conditions described. As a general rule, seeds lose their vitality with age, their development being much slower the older they get. The question of frost injury to the germination value of seeds was also discussed at length, and instances given of characteristics possessed by various seeds that had been exposed to frost. Seed storage and prevention of diseases in store and other important points in connection were also treated of in this excellent and interesting paper which we regret we cannot publish in full, owing to its length.

Pure Food Law Inoperative.

Washington, Jan. 24.—The referee board appointed to determine whether benzoate of soda used in food as a preservative is harmful and deleterious to human health has decided that it is not, and thus flatly joins issue with Dr. Harvey W. Wiley, chief of the bureau of chemistry of the Department of Agriculture, who holds that it is harmful and injurious, and who was responsible for the issuance of a series of restrictive regulations under the pure food act concerning the use of benzoate of soda by canners.

Texas Has Press Bureau Like Sec'y. Wilson

College Station, Tex., January 30.—Dr. O. M. Ball, botanist at the Agricultural and Mechanical College of Texas has learned that dealers in seeds are opposing the bill he has prepared for passage by the present legislature requiring purity in all seeds offered for sale. At his laboratory at College Station he has 1,000 samples of seeds which show the presence of foreign weed seeds and weed pests, that are damaging to any farm. His proposed law is in the interest of the farmer, and he says there is no reason seeds offered for sale should not be pure. The opposition to the bill comes mostly from outside the state. Some farmers, who have been benefited by what Dr. Ball has told them of weeds on their farms, have written to their legislators urging the passage of the bill. It is designed to protect all the farms in Texas from pests and thistles.—Galveston News, January 31.

Imports.

During the week ending February 6 imports were received at New York as follows:

Vaughan's Seed Store, eight cases bulbs.

C. C. Abel & Co., 64 cases trees.

H. F. Darrow, 70 pkgs. plants; 34 pkgs., one bbl. seed.

McHutchison & Co., two cases plants; 29 bbls. seed.

A. T. Boddington, one case bulbs.

Schulz & Ruckgaber, 500 bags sunflower seed.

H. Nungesser & Co., 50 bbls. grass seed.

Brown Bros. & Co., 250 bags seed.

To others: 44 cases, 19 pkgs. plants, one case bulbs, 297 bags, one pkg. seed, 165 bags of clover seed, 37 bags grass seed.

The Crego Aster

"The Best in the Market"

After having demonstrated, by actual competition, in the open market, that it has fully earned its title as "The Best in the Market," the CREGO ASTER is again offered to the trade, with the positive assurance that it has "made good."

A SATISFIED GROWER

Near St. Paul, Minn., writes under date of September 15th:

"The germination of the seed purchased from you last spring was the best I ever saw, apparently every seed producing a plant. I gave the best possible cultivation and saw the results about the first of September, when they commenced to bloom. They were perfectly magnificent. At our annual flower show I entered the CREGO ASTER in seven different classes, and took first prize in every instance. My asters were in a class by themselves, and a local florist, who was one of the judges, said they were the finest he had ever seen, and he offered to buy my crop at from $5.00 to $7.00 per 100."

This Aster (distributed last year for the first time) has been given a fair trial in nearly every part of the United States and Canada, and has proved itself to be exactly what every florist needs: an aster which finds instant favor with his customers, for which they are willing to pay the highest price, and which gives him the highest return for his time and labor. It costs the grower no more to produce flowers of that grade than to grow the common run of asters which sell for but little more than enough to pay express charges. I am offering the CREGO ASTER in two colors only, viz.: shell pink and pure white, my stock of rose pink being sold out.

If you are interested in getting the highest possible returns from your aster crop next summer, I shall be pleased to hear from you at an early date. Late orders will probably find the supply of seed exhausted.

The price of CREGO ASTER seed is the same as last year, viz: Trade packet, $1.00; half ounce, $4.50; ounce, $8.00; cash with order.

Seedsmen, write for liberal discounts.

G. S. CREGO, 693 E. 10th St., **Portland, Ore.**

Vick Quality Asters

The Standard of Excellence.

Introduced by us grown everywhere

Vick's Late Branching (8 colors.)

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

"THE coldest spell in 10 years, freezing all vegetables but cabbage, which will pull through," writes J. Thomas, Fitzgerald, Ga.

CONNELLSVILLE, PA.—Robt. Felty of this city, and W. W. Wright of Cadiz, O., a member of the Wright-Metzler Co. have associated themselves with a number of Tampa capitalists to develop an immense tract of gardening land fronting along the Bay of Tampa for four and one-half miles. There are 14,000 acres in the tract and a company capitalized at $350,000 has been formed to boom the colonization scheme.

Tomato Plants.

The spring crop of tomatoes under glass will need constant attention from now on. The plants must be under way by this time, and should never be checked or stunted in any way. We like to prick out the seedlings in flats; these flats should be shallow, say two inches deep. Give the plants two inches each way, and use a fairly rich soil and regulate the growth by water supply rather than give poor soil. Seedlings should be transplanted as soon as the character leaf appears. After they have covered the flats it is best to pot into 2½ or 3-inch pots; give plenty of room and rather a low temperature; 50° at night is all right. As soon as they are rooted through the pots they must be planted out or repotted. If beds are not ready repot into 4 or 5-inch pots.

Some growers plant among lettuce while quite small. The proper temperature for lettuce does not suit the tomatoes, nor the moisture, and often it would be better to shift into larger pots and keep them in the plant house until the lettuce is out of the way. It is surprising what sturdy 5-inch pot plants, nicely in bloom, can do when transferred to the beds April 1. Pot growing has another advantage; it induces early fruiting, and to some extent prevents plants running to vine too much. Until a good setting of fruit is obtained tomatoes should always be on the dry side; rather let them hunt for water than give an oversupply. A bluish tint on the foliage and stem shows the proper condition; a green or yellowish color denotes excessive moisture.

MARKETMAN.

Seasonable Notes.

At this time of the year, the main point is to plan carefully for the succession of crops. That is, where cucumbers and tomatoes follow lettuce, to waste neither time nor space or stunt the young plants waiting for a crop to move. In the case of cucumbers, the beginner should have patience and not start the plants too soon. Given a warm plant house, nice cucumber plants can be produced in five weeks. They should never vine in the pots. Better have to wait a few days for the plants to size up, than let the plants wait for the space. Lettuce will

Stokes' Bonny Best Early Tomato

Is a Wonder. It is MAKING GOOD wherever grown.

If you grow tomatoes for early market you should use it.
If you grow tomato plants as a side line (there's money in it), it will make you a reputation.
It is **very early.**
It is a fine bright scarlet.
It is just the right size and shape.
It is the finest all-around tomato ever introduced.
It holds its size clear to the end of the season better than any tomato I have ever seen.

Always mention The American Florist when you order stock.

grow much faster from now on—four weeks in March are better than seven in the late fall.

Cucumbers may be started directly in small pots, or in flats. If in pots, use 2½-inch and sow several seeds in each. When up, thin to two, and when well rooted shift to 4-inch and cut away the weaker one. If in flats, transplant into 2½-inch pots as soon as well up; never wait, or they will suffer and may never be good thereafter. Select a warm, sunny place for the plants, where 60° is the minimum temperature. A smaller lettuce is preferred by many retailers; try some 6x6; often a higher price is obtained for such and time saved. Never sow radishes among lettuce as the radish is a robber of fertility and the apparent gain will develop into a loss a little later on. MARKETMAN.

Tomatoes for Forcing.

ED. AMERICAN FLORIST:—

What are the best tomatoes for forcing named in order of merit?

H. F. S.

There are at present two sections of tomatoes used by greenhouse men—the English and American. America being the home of tomatoes, it sounds rather odd to talk about English varieties; but when we consider that tomatoes cannot be grown outdoors in England (? ED.)—that large areas of glass are devoted to forcing tomatoes, that Englishmen resort to boxes and pots to produce their crops—we get some idea why there are English varieties.

These are simply bred for a special purpose and to fruit under difficulties. As a rule, these English tomatoes are preferable for winter forcing, and our American kinds for late spring work. A common fault of all English kinds is lack of size, otherwise they are very good.

At the head of English varieties we place Comet; next in order, Frogmore; third, Sutton's Best, which is probably the largest and meatiest; fourth, Stirling Castle. All these bear large clusters of fruit, which should be thinned for best results—that is, allow each cluster to mature four to six fruit.

In the American section I would recommend Early Michigan and Livingston's Hummer, which are almost alike; Henderson's Freedom; Chalk's Jewel. For a pink market, Globe is an acquisition. Under glass, all its outdoor faults are lost; it can be finished without a crack and is the finest table tomato we have; Beauty is used by some—its fault is lateness. MARKETMAN.

White Fly in Lettuce.

ED. AMERICAN FLORIST:—

My lettuce is badly attacked with white fly, introduced some time ago with plants. How can I get rid of it?

Iowa. L.

White fly has never attacked lettuce to my knowledge; if it does, as in "L.'s" case, there is only one remedy—fumigation with hydrocyanic acid gas. Tobacco smoke is useless and spraying impractical. Whenever one has to use a new insecticide it is safest to try it in mild doses and increase until the killing strength is found. I would advise "L." to thoroughly acquaint himself with the above fumigant. Then begin with one-half strength and note result. The white fly is delicate and easily killed. It will require a regular weekly fumigation for some five or six weeks to eradicate the pest as the eggs and larvæ are not reached by the gas, or better, not killed; and as fast as new flies appear they must be destroyed. Where lettuce is well grown I do not see how white fly could get much start as the crops are cut so quickly, that not much time is given for them to breed. They are more at home among tomatoes and cucumbers. MARKETMAN.

American Onions in Germany.

Consul-General Robert Skinner, of Hamburg, in stating that the duty upon onions imported into Germany from the United States is 95 cents per 220 pounds, while onions from many others countries are free, draws the following conclusions: This fact would render importation for German consumption difficult. There is, however, a considerable trade in onions for re-exportation, and in this business American onions would be in the same position as others. There are no available export and import statistics covering this article. Large German onions, known in the trade as "English sorted," are exported to a fairly large extent from Hamburg. These onions are now (December 5) worth from $2.14 to $2.26 per 110 pounds. Dutch onions are worth $1.42 in this market, and Russian onions $1.30 for 110 pounds. The possibility of selling American onions is merely a matter of price. (The names of importers of onions are filed with the bureau of manufacturers.)

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points February 6 were as follows: New York, mushrooms, 25 cents to 55 cents per pound; cucumbers, $1.50 to $2.50 per dozen; lettuce, 75 cents to $1.25 per dozen; tomatoes, 11 cents to 22 cents per pound; radishes, 75 cents per dozen bunches; asparagus, $6.50 per dozen bunches; rhubarb, $1 per dozen; grapes, Malaga, $6 to $8 per barrel. Kansas City, Mo., cucumbers, $1.50 per dozen. Cincinnati, cucumbers, $2 per dozen; mushrooms, 30 to 40 cents per pound. Chicago, cucumbers, $1.50 to $3 per dozen; lettuce, $3 to $5 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 30 to 40 cents per pound; radishes, 40 to 60 cents per dozen bunches; asparagus, $2.75 to $7 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.25 per pound; peppers, 40 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound, extra fancy, 14 cents.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

LAKE VIEW in Lake county, southern Oregon is reported to be a good location for and in need of a nursery.

LOUISIANA, MO.—Stark Bros. Nurseries & Orchards Co. recently made a heavy shipment of stock to South Africa.

ATTICA, N. Y.—John Griffith, who died suddenly January 28 at his home on Main street at the age of 69, was a well known resident who for years had been engaged in the nursery business.

SIOUX CITY, IA.—The J. C. Rennison Co. of this city has been incorporated with capital stock $60,000. The officers are Lizzie A. Rennison, secretary, and Fannie L. Rennison, treasurer.

PAUL KRUGER, a well known fruit grower and horticulturist of the Yakima valley, Washington, says that in spite of reports to the contrary he is of the opinion that the fruit prospects are exceedingly good, the recent cold snap not having damaged even the early peach buds.

GRAND RAPIDS, MICH.—Former Superintendent of Parks Wenzel L. Cukerski has completed plans for the new Cadillac cemetery, which is to be a 20-acre addition to Maple Hill cemetery. The land was the gift of W. W. Mitchell and Frank J. Cobb. The drives and walks will be laid out by Mr. Cukerski in April.

THE report of the park commissioners of Davenport, Ia., is a well got up book containing the report and a short description of the number of beautiful parks under the management of Superintendent Emil Boehm. The highly glazed paper used brings out the excellent photographic illustrations to perfection, and these show some very beautiful and interesting parts of the parks.

THE annual report of the park department of Cincinnati, O., is a book of 67 pages containing Superintendent Rodgers' reports on the various parks, commons and the floricultural department. The cost of running each park is given, and a comparison of the parks in the city with those of other leading cities. An interesting list of plants and trees grown is included, and the report contains many fine illustrations from photographs of various points of interest and beauty, and a map of the entire park system.

BARABOO, WIS.—M. F. Foley, president of the Great Northern Nursery Co., recently returned from Chicago accompanied by detectives. They brought with them Fred Manual, alias Smith, who is charged by Mr. Foley with forgery. The defendant was captured at Hammond, Ind. He was engaged several months ago as a salesman for the company and last fall forged orders began to arrive, and soon aggregated about $800. Mr. Foley took action at once and for the past six weeks the detectives have been on the trail of the culprit.

H. S. BERLINGER, landscape architect for the Jewel Nursery Co., Lake City, Minn., has been in Baraboo, Wis., conferring with the Hon. Philip Check who was selected by the officers of the Baraboo Cemetery Association to receive plans and estimates for beautifying the city cemetery. Among the improvements to be made is the platting of the addition to the cemetery located on the south side of the grounds. The grand entrance is to be at the head of Oak street. Superfluous trees are to be removed and ornamental trees and other shrubbery planted.

Brown Tail Moth

We print hereunder a clipping from a newspaper on the reintroduction of this pest, together with remarks on the subject by Professor Cowell:

Professor John B. Smith, New Jersey state entomologist, has sent out warnings that the French "brown-tail moth," which shoots spines from its body into people's skin, has invaded the United States. It has been discovered in the cocoon state in every parcel of shrubbery and nursery stock imported from France this winter. So important does Professor Smith consider the invasion that he has called a meeting of the leading entomologists of the east, to be held in this city (New York) next Tuesday, to consider the plague.

The moth is also known as the nettle-bug. It is damaging to shrubbery and forest growth and a torment to the human race. If not checked it will make mosquitoes seem mild even to Jerseymen. Flying through the air like clouds of dust, the insects drop tiny nettles like invisible spears which penetrate the cuticle of man.—Chicago Examiner January 29, 1909.

It would seem that it is impossible for the average newspaper reporter to give a plain statement of facts. Perhaps the public demands the embellishment and prefers the highly seasoned article. It is doubtless true that such articles as the one above quoted are more apt to catch the public eye, but the gross exaggeration is likely to lessen in the end the effect of the few facts included. I do not know whether or not Professor Smith has called a meeting of entomologists, but I do not for a moment believe that he is in any way responsible for the statements made in the article.

The brown-tail moth (Euproctis chrysorrhea Linn.) is not new to this country, it having been introduced nearly 20 years ago, supposedly in an importation of Holland grown roses. This winter it has been brought in again in an importation of French nursery stock shipped to Dansville, N. Y. There may have been other cases, but this is the only one which has come to my knowledge. Certainly it is untrue that it has come in "every parcel of shrubbery and nursery stock imported from France this winter."—"Flying through the air like clouds of dust the insects drop tiny nettles like invisible spears which penetrate the cuticle of man." The female moths like the male of this species, flies freely. They are about an inch or more across and are pure white except for a bunch of brown hairs on the tip of the abdomen; so, you see, it requires quite a vivid imagination to transform them into clouds of dust. The caterpillar when full grown is about two inches long and bears two tufts of reddish brown hairs on each segment of its body. These hairs are finely barbed, quite brittle, and are constantly being broken off by striking against twigs, etc. When these hairs come into contact with the human skin they cause a very unpleasant irritation which is known in eastern Massachusetts as "brown-tail rash." The vision of these caterpillars "Flying through the air" must truly be an awe inspiring sight.

I have spoken elsewhere of the danger of the introduction of this pest, and of its further spread in this country; but I take this opportunity to add a few words to the warning. The eggs are laid in July or August on the under side of leaves, and the young hatch out in about a month. After feeding for a short time the young caterpillars begin to prepare their winter quarters by binding together with a silken web a bunch of leaves at the tip of a twig. In this nest they pass the winter. After the foliage of the trees has fallen these nests remain on the twigs, and are, therefore, quite conspicuous and easily seen and gathered. After emerging from the nest in the spring they feed voraciously until full grown when they spin their cocoons usually on the bark of the trees on which they feed, but sometimes upon leaves, stones, fences or other objects.

It is from these nests that the principal danger of establishing new centers of infection threatens. These may be easily removed from the twigs of nursery stock, but they might easily escape observation in the ordinary packing material used in shipments. Look out!

JOHN F. COWELL.

Milwaukee Parks.

In a report made public January 30, the metropolitan park commission of Milwaukee, Wis., outlines the system of parked thoroughfares which it recommends in connection with a civic center for adoption by the city. Drawings accompany the report which show that the civic center is to extend from the city hall to Ninth street, embracing four public institutions at the outset. These are the city hall, auditorium, library and museum. It is the proposal of the commission to have all public institutions hereafter to be erected placed within this area.

Radiating from the center thus established are to be what the commission terms "parked ways," the minimum width of which is to be 130 feet. The prevailing width through crowded sections is to be 150 feet, and with the co-operation of the county it is proposed to extend them beyond the city, parks being formed by widening them at intervals at the outskirts. The report shows the manner in which these ways are to be divided into drives, spaces for trees and shrubbery, car lines, grass plats, sidewalks, etc.

To meet the expense of the undertaking, says the Milwaukee Free Press, it is proposed that the city, instead of buying the strips of ground actually needed for the ways, purchase strips of the width of two or three blocks, replatting the land not needed for the "parked way" and selling it off. A net profit to the city is thus contemplated, "although," the report says, "much money becomes involved during the procedure."

Notes on Nuts.

The Department of Agriculture recognizing the great commercial importance the pecan is attaining, not only in the south, but in the whole country, has made a special appropriation to aid in its development. The work planned and already in operation is along lines which the individual cannot do for himself yet is of importance to all concerned in pecan production.

FRUITLAND NURSERIES

Established 1856. **AUGUSTA, GA.**

In one of the papers prepared for the recent Nut Growers' convention is found the following in regard to pecans: "Where hundreds of pounds were used a few years ago, thousands of pounds are used now. I was very much struck by this fact a few days ago, when a pecan grower made a remark to the effect that his trade took his output now just as readily as it did years ago, though in the meantime his crop had increased many fold."

The nut producing qualities of the pecan is no longer a debatable question. The nature-planted trees in the valleys of the Mississippi, the Brazos and the Colorados, that have for hundreds of years yielded their crops of nuts and withstood the vicissitudes of wind and weather, of man and beast, attest this. Trees 100 years old, planted by man, go to show that it yields readily to cultivation. We produce the nuts. What more is demanded?

Sophora Japonica.

There are few trees flowering during the months of July and August, and fewer still brighten the September days. However, Sophora Japonica (Stypnolobium Japonicum) is included among these few, says The Garden, and on that account should be extensively grown even were it far less beautiful than it really is. The sophora forms a well-shaped, bushy tree 30 to 40 feet high, and of similar dimensions in thickness. It has light green leaves, which give it an attractive appearance even when it is not in bloom. The pea-shaped flowers, which are produced in panicles nine inches long, are quite small, being no more than half an inch across. They are, however, produced in such abundance that their diminutive size is no disadvantage.

Begonias Failing.

ED. AMERICAN FLORIST:—

Will you please tell me the cause of begonias which I bed out in summer thriving well where they are bedded, but in the fall, when I take them up for stock, they are loaded with eel worm and the few I take in degenerate and produce no cuttings? I have B. semperflorens, B. Vernon, B. La Vesuive, B. Erfordii and B. gracilis. Can I mix anything with the soil, which is good loam enriched with good well rotted horse manure?

Massachusetts. M. H. W.

Since the primary cause of this trouble with begonias appears to be injury from eel-worms, or nematodes, it will first be necessary to get rid of this infection, which probably had its origin in the greenhouse, the plants being more or less knotted when set in the open and finding congenial surroundings during the warm summer months. The sand in the cutting bed and the soil used for propagating should be sterilized by steaming until a potato placed in the upper layer is well cooked. Cuttings may then be grown which will be free from the disease at the time they are set out in the spring. It was formerly supposed that an exposure to freezing would exterminate nematodes in our northern states. We now know that this is not always the case, but if "M. H. W." can plant his begonias in a new place for a season or two, the trouble will probably disappear. In many cases, in fact, it is only necessary to make sure that the young plants are perfectly healthy when set out. A. F. W.

Insecticide Treatment for Thrips.

ED. AMERICAN FLORIST:—

I have read A. C. Beal's article on "Insecticide Treatment for Thrips" with much interest, and would like to know where I can buy 40 per cent preparation for $10 per gallon. H.

The price quoted is not absolute, but was given to illustrate and enforce the point I desired to make. To have given catalogue prices would have singled out a special brand, and as we are endeavoring to be entirely fair to all the insecticide manufacturers, we sought to give the facts without favoring any one of them. Since the question has been raised, your attention is called to the fact that the first insecticide named on the list averaged so close to 40 per cent nicotine as to be within the limit of analytical error. This one can be purchased from the leading seedsmen for $10 per gallon, as shown by an examination of their retail catalogues.

A. C. BEAL.

CARTHAGE, MO.—G. H. Hollied has moved here from Webb City and taken a position at Finn & Sons' greenhouses. Miss Nell Hollied has taken a position as clerk in charge of the Finn retail store on Main street, a block south of the square. Previous to coming here, Mr. Hollied had been in charge of the S. S. Brenneman greenhouses at Webb City, and before that, was in business for himself at Maryville.

REDLANDS, CALIF.—Frederick Hosp, the landscape gardener, who planned the floral and forestry improvements of Smiley Heights, has arrived in the city to draw plans for the improvement of the new A. K. Smiley library park, south of the present park and library. It is planned to plant most of the large tract to lawns, with a border of trees and shrubbery around it and several shade trees throughout the lawn.

Greenhouses and Nurseries: Western Springs, Ill.

SAN DIEGO, CALIF.—Arthur Nyberg, a well-dressed young man, was surprised January 28 when detectives told him he was under arrest, charged with stealing $100 from his employer in Ohio. He readily admitted his identity, and told the officers he thought he was safe from prosecution in California on account of the small amount he had taken by means of forging his employer's name. Nyberg was bookkeeper for William Zahner, of Conneaut, O. Finding that his salary did not meet his wants, he, it is alleged, signed checks with his employer's name.

GRAND RAPIDS, MICH.—The park and cemetery commissioners have decided to loan no more plants to private individuals or institutions. "We have requests nearly every day from various organizations, churches and charitable institutions asking for permission to borrow some plants or flowers for some particular occasion," said H. G. Barlow, "The result is that the plants are injured and furthermore it is not giving the florists in the city a square shake. It is a part of their business to furnish plants and flowers for functions and when the city fills the bill in this regard it simply means that the men engaged in the business are being robbed of patronage which belongs to them."

Starting a Greenhouse.

ED. AMERICAN FLORIST:—

What size greenhouse would it be necessary to build, devoted mainly to carnations, chrysanthemums, bulbs, ferns, etc., for retail trade, that would conveniently take one man's time to properly care for the stock, the average income being about $12 per week net, including crops raised outdoors during the summer? What amount of capital would be necessary to properly build this house and install heating system?

Indiana. E. H.

While no very definite answer can be given to the questions, if two houses about 28x100 feet could be obtained, together with the necessary space for a workroom and salesroom, one would be fairly well equipped for business. One house could be run at about 50° and the other at 60° making it possible to grow quite a variety of plants. The houses would cost perhaps $2,500, and one should have $500 as floating capital. While it would be possible to build the houses for a smaller sum they would not be satisfactory, or durable.

L. R. T.

HENRY A. DREER, Philadelphia, Pa.

LEGAL NOTES.

Lawsuit Over Tomato Plants.

F. W. Taylor, Bridgeton, N. J., is the complainant in an action brought against the Lehigh Valley Pickling Co. to recover on a disputed claim for $150 worth of tomato plants grown last year for the defendant company at plaintiff's greenhouse on order, as alleged, of the defendant. The defendant took some of the plants, and it is claimed that the others were left on Mr. Taylor's hands, to his financial loss. It was agreed between A. E. Campbell, attorney for the plaintiff, and E. A. Kiley for the defendant that the matter be submitted to arbitration. J. H. Bell and Wm. Patten have consented to act as arbiters and to choose a third one.

Flower Show Prosecution.

At Ashbourne (Derbyshire) petty sessions, October 1, a cottage gardener was summoned by the Thorpe and Dovedale Horticultural Society for attempting to obtain, by alleged false pretenses, two sums of three shillings each on the occasion of the annual show held at Thorpe, August 19 last. Gordon Fraser, honorary secretary to the society, said the defendant was awarded the first prize for a collection of fruit, which consisted of apples, pears, plums, etc., but the money was withheld in consequence of certain information which reached the committee. A visit was paid to defendant's garden, and no pear tree could be seen there, while the other fruit trees did not correspond with the exhibits. Smith admitted that he had obtained the pears from a neighbor, but claimed that he had grown all the other specimens. Mr. Fraser added that the society, which has recently been revived after some years' cessation, had lost a number of subscribers owing to a practice which had prevailed of persons sending in as their own produce exhibits which had been obtained elsewhere. The officials had issued a warning that such exhibits would be forfeited, and that "further proceedings might be taken." Witness submitted a copy of the preliminary schedule, showing the rules, one of which was that all exhibits must have been on the premises and in the possession of the intending exhibitor at least three weeks before the date of the show. The chairman of the bench said the rule was faulty, and while the society had done well to bring the case before the court, there could be no conviction. The rule should have made it plain that the exhibit was the bona fide produce of the exhibitor. The summonses were dismissed, Mr. Fraser stating that the rules would be altered as suggested.—Gardeners' Chronicle, London, Eng., October 10, 1908.

Cement Benches.

ED. AMERICAN FLORIST:—

I have read the comments on the cement bench as used by the E. G. Hill Co. of Richmond, Ind., and am not surprised it is a failure. Tile benches have proven a success, and if cement benches are constructed along the same lines they will prove equally satisfactory. The slabs referred to are too thick and too wide; they should also be porous. Slabs eight inches wide and one inch thick have been tried and good results obtained. A one-piece molded bench or wet molded slabs are not porous enough, causing the ground to sour. My suggestion is "do not condem cement benches but try them along lines that have proven successful." The roses shown at Indianapolis were grown on cement benches.

GEO. M. GARLAND.

DIXON, ILL.—The large supply tank of the water system at Norman Long's greenhouses was burned February 2, entailing a loss of about $600. There was no insurance carried on this part of the equipment, as it was supposed there was very little chance of fire damaging it. The tank had a capacity of 125 barrels, the water being forced to it from a well. Beneath the tank was a heater to prevent the pipes from freezing, and the fire must have started in some way from this.

Araucaria Excelsa

5½ to 6 in. pots, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, from 18 to 25 to 30 in. in height 60c, 75c, $1.00 to $1.25.

Araucaria Robusta Compacta and **Excelsa Glauca,** specimen plants, small stock, the same in width as in height. 6-in. pots, 4 to 5 years old, 3, 4, 5 and 6 tiers 20 to 25 to 30 in. high, $1.50, $1.75 to $2 00 each.

Cineraria Hybrida, best strain, 4-in. pots, $10.00 per 100; 5½ to 6 in. pots, just right for Easter, 25c, 35c 50c.

Areca Lutescens, 4-in. pots, three plants in a pot, 25c.

Ficus Elastica (Rubber), 5½ to 6 in. pots, 25c, 30c and 40c.

Boston Ferns, 6-in. pots, 50c; 7-in. pots, 75c, $1.00 to $1.25.

Scottii Ferns, 5½-in. pots, 40c; 6-in. pots, 50c; 7-in. pots 75c to $1.00.

Whitmani Ferns, 7-in., as big as a bushel basket, 75c, $1.00 to $1.25; 9-in. pans, as big as a washtub $1.25 to $1.50.

Neph. Amerpohlii, 5¼ to 5½in. pots, 30c, 40c and 50c.

Kentia Belmoreana, 5 good leaves, 5¼ to 5½ in. pots, 25 to 30 in high, 50c to 60c; 4-in., 35c.

Kentia Forsteriana, 6 to 7-in. pots, 25, 30, 40 to 45 in. high, 75c, $1.00 $1.25, $1.50 to $2 00 each.

Kentia Forsteriana, 5¼ to 5½ in. pots, 20 to 25 in. high 50c to 60c.

Primula Chinensis, in bloom, 5¼ to 5½ in. pots, $2.00 per doz. **Primula Obconica,** 4-in., 10c.

Azaleas for Easter, best American varieties, 60c, 75c, $1.00, $1 25, $1.50 to $2.00 each.

Jerusalem Cherries for Washington's birthday, large plants, full of buds, 6 to 6½in. pots, 35c 50c, 75c.

Moonvines (Ipomœa Multiflora), best white Moonvine for which we have a world-wide reputation, now ready, 2½-in. pots, $5.00 per 100.

Have an Immense Stock of Easter Plants.

Azaleas by the 1000; Spireas, Lilies, Hyacinths, Daffodils. Watch adv. for Easter.

Please state if in or out of pots.

NO LIFE TO BUSINESS.

Trade reports from different sources about the city are no more encouraging than a week ago. There does not seem to be any life to the business and it takes some tall hustling to unload the stock coming in; especially is this true regarding carnations, for it seems that at the present writing this flower must be in full crop with every grower, judging from the amount shipped to this market. Roses are about equal to the demand with the exception of American Beauty which from reports are off crop. Violets were not so plentiful the past week and the singles were sold out clean every day. Bulbous stock is not being forced very extensively about this city this season, but there is always a supply on hand each evening.

The Hyde Park Rose Co. will disseminate its new rose the coming spring. This is the variety known hereabouts as the Taft rose and received a lot of advertising about this city last summer by its blooming qualities and beautiful color. The first day this firm notified the trade that they were going to send out the rose this spring they received orders for 1,500 plants and is very much encouraged by the future outlook.

S. S. Skidelsky, Philadelphia, was a caller the past week stopping over on his way home from the carnation meeting at Indianapolis. He greatly praises the two new roses, My Maryland and White Killarney and, judging from the orders he has booked, these two varieties will be grown very extensively next season.

J. C. SCHMIDT, Bristol, Pa

Etherization of Plants for Forcing.

This was the topic of Wm. Stuart of the Vermont Agricultural Experiment Station at the regular Saturday morning lecture of the Massachusetts Horticultural Society February 6. Mr. Stuart said, in part:

The employment of ether and other substances possessing anæsthetic properties as an aid to forcing certain flowering shrubs, and herbaceous perennials into bloom during their period of dormancy or of intense rest, is a comparatively new development in plant forcing. Notwithstanding the fact that ether, chloroform and other anæsthetics are now known to impart when properly used, a decided growth impulse to plants in the earlier stages of dormancy, its employment commercially, so far as the writer is informed, is exclusively confined to European establishments. A possible explanation for this lack of interest on the part of American gardeners, is that flowering shrubs, such as lilacs, deutzias, spireas, viburnums, etc., are not used so extensively for forcing purposes as in Europe, certainly not in the early winter months, when it is most difficult to force them successfully.

Investigations regarding the nature of the effect of ether, chloroform and other substances upon plants may be very properly considered under two heads, viz.: The physiological effect upon the tissues of a plant in an active growing condition, and the growth acceleration effect upon plants in a state of complete rest. Naturally the first phenomenon to be studied was that of the physiological effect. Such experiments were the results of inquiries on the part of investigators as to the comparative effect of anæsthetics upon animals and plants.

LECLERC'S INVESTIGATIONS.

The earlest mention we have been able to find regarding etherization of plants is that contained in an article by Drude, Ledrin and Naumann, published in 1902, in which the authors claim that Leclerc, more than 50 years ago observed the action of ether upon plants. Unfortunately they neglected to cite their authority for this statement, and we are therefore left in doubt as to the exact nature of Leclerc's investigations, and are unable to determine whether he was the first to discover that plant response to anæsthetics, was physiologically similar to that in animals. It seems rather singular that such writers upon the subject of etherization as Johannsen and Maumene should not have known of these earlier investigations, certain it is that no mention is made of Leclerc's work in any of their publications.

These writers and those who have followed them, with one exception, have given the credit for this discovery to Claude Bernard. Bernard's observations were made in 1878 and he stated that his experiments proved that ether and chloroform react very naturally upon all living substances; "their action reveals in the sensibility a property common to all living beings, both animal and vegetable, simple or complex." Bernard continued his observations upon vegetable tissues by experimenting with seeds. He found that when seeds were subjected to the fumes of ether, no germination could be secured. In 1891 Dr. Raphael Dubois published the results of some studies on the physiological effect of anæsthetics upon plants, confirming Bernard's discovery.

While the study of the effect of ether and other similar substances upon the tissues of plants in active growth served to show the close physiological relationship between plants and animals, it failed to give any evidence of an after stimulating effect upon plant growth. The discovery of this phenomenon did not occur until some 12 years later (1890), when Dr. W. Johannsen of the royal school of Copenhagen, Denmark, conceived the idea that the normal resting period of plants might be very materially abridged and their growth accelerated by the use of ether or chloroform. His first experiments were performed upon willows and bulbous plants. The results secured from these plants were so satisfactory that in subsequent experiments he included lilacs, viburnums, azaleas, deutzias, and other ligneous plants which gave even more marked success. The results of these investigations were first made public by Johannsen in 1893 in a very interesting paper presented before the Royal Academy of Science of Copenhagen. These and later experiments were embodied in a brochure published by Johannsen in 1900. The publicity attendant upon the presentation of Johannsen's paper in 1893 quickly awakened an interest among horticulturists in other parts of Europe in the commercial possibilities of stimulating plants into active growth by the aid of anæsthetics.

PERIODS OF MOST MARKED EFFECT.

Generally speaking, all hardy plants of northern climates have a well-defined rest period, which is usually designated the dormant period. During this season of rest the protoplasm of the cell is in a more or less complete quiescent condition. The first period of repose is defined as that immediately following the formation of flower and leaf buds, extending from June to September. The second period, which is shorter, includes September and about three-fourths of October. The after-rest period begins the latter part of October and extends into December, and under certain conditions possibly into January. According to Johannsen's observations, the most marked effect from etherization is obtained from treatments made during the first and last rest periods. The central period being the season of deepest rest, it is more difficult to create an impression upon it by etherization. Less marked results may be expected toward the close of the third rest period than at the beginning of it. Of course, any division of the period of rest in plants must be of a more or less arbitrary nature. Unseasonal climatic conditions exert such a marked effect upon the plant growth as to materially change the first and second rest periods. Such variations must of necessity be taken into consideration by the forcer of plants.

METHODS OF PROCEDURE.

While there is no one method of subjecting plants to the vapors of anæsthetics which may be considered superior to all others, there are certain general rules by the observance of which one may attain a greater degree of uniformity and success in his results. Woody plants, like lilacs, spireas, viburnums, etc., force much more satisfactorily if grown in pots the season in which they are to be forced. The balls of earth of the plants to be treated should be reasonably dry. Their removal from the pots for treatment is not a necessary procedure.

The receptacle to be used for etherization purposes should be so constructed as to be essentially air-tight when closed. Wooden, metal or cement cases may be used. Those used at the Vermont station are constructed of two thicknesses of matched lumber, with building paper between. The interior is thoroughly coated with paraffin, applied when hot. The door fits tightly, and after closing the crack surrounding it, is filled with melted paraffin, hence there is no possibility of leakage of gas. The anæsthetic used is poured through an opening in the top of the case, onto a sponge in a receptacle suspended immediately beneath. The sponge facilitates the vaporization of the liquid used. With the closing of this intake the process is completed.

Plants treated in October require a longer period of treatment and a larger amount of anæsthetic per cubic foot of air space than similar plants treated in November. The same statement applies equally as well to November and December treatments. Briefly stated, the later the treatment and shorter the period of exposure, the smaller the amount of anæsthetic used. The best temperature at which to treat the plants is in the neighborhood of 60° F. It may vary, however, between 55° and 65° F. without materially influencing the results. If higher temperatures prevail the dosage, period of treatment, or both, should be reduced accordingly. On the average one may expect, in such plants as lilacs, that those etherized will come into bloom from eight to ten days earlier than the untreated ones.

VERMONT EXPERIMENTS.

Experiments at the Vermont station upon the use of anæsthetics were first undertaken in the winter of 1903-4. The object of the investigation was to determine whether anæsthetics would produce growth acceleration in plants forced for their vegetative rather than their flowering parts. The results of trials indicated at once that ether at least by the methods employed, could not be used as a substitute for freezing. A new line of research into the comparative efficacy of ether as compared with other substances possessing anæsthetic or toxic properties was undertaken during the winter of 1906-07. Results were secured to indicate in a general way at least that other substances could be substituted for ether and chloroform in forcing plants into growth.

Profiting by the previous season's experience the experimental work of 1907-08 was confined very largely to pot-grown plants of lilacs, azaleas, peonies and irises. The data obtained from the treatment of bulbous plants have not been sufficiently uniform to warrant any conclusions.

St. Paul.

A dance and card party will be given under the auspices of The Minnesota State Florists' Association at U. C. T. hall, corner Fourth and St. Peter streets on Monday evening, February 15. It is earnestly hoped that everyone in the trade and their friends will attend and make this first social affair a success.

FELIX.

CLINTON, IA.—Andrew Bather's store has been removed to Fifth avenue, where an entire store building will permit the fullest display of flowers and decorative accessories. The stock in all lines has been enlarged and is displayed to the best possible advantage.

Pillsbury Carnation Staple

"We are highly pleased with them can put them on twice as fast as another patent or rubber bands, and making a neater job than either."

We manufacture all our
Metal Designs, Baskets, Wire Work & Novelties
and are dealers in Glassware, pottery, Decorative Greens and all Florists' Requisites.

Denver.

FLOWERS SCARCE.

The prominent feature of the cut flower business for January was the scarcity of flowers. Everything in roses was very scarce, especially American Beauty, as the growers say they were off crop, and it was very difficult to get enough stock to fill orders. Business was very much better for January than a year ago. This was due chiefly to a good many funerals, and a number of retailers report an increased business over last month of 40 per cent, which was very good. Prices were high on all grades of stock. We are now getting in quite a number of tulips and hyacinths in pans, and this will relieve the cut flower market so we will have plenty from now on. Carnations are commencing to come in plentifuliy, and all very fine. In fact, owing to the cold weather, all grades of stock are A-1—long stem, good sized flowers, with good keeping qualities.

A. Mahan, formerly of the Alpha Floral Co., is spending the winter in California for the benefit of his health, which has been very poor the past year. He has sold the business to the Park Floral Co. PLATTE.

URBANA, O.—Last June, Chas. Greis engaged a man to sell flowers for him. He was successful in getting orders but omitted to turn in the money received. After looking for him ever since, Mr. Greis has at last located the gentleman in Columbus and he has been arrested.

CHAMPAIGN, ILL.—Bode & Johnson, were swindled recently by a smooth talking young man who called at the greenhouse and ordered something over $3 worth of flowers which he had delivered. In payment he presented a check on the Citizens' bank for $20, payable to G. A. Noble and signed with the same name. This he endorsed with the same name and received $16 in cash for change. When the flowers were delivered and inquiry made, the firm learned that no person of that name lived at the address and later the firm found there was no money in the bank to meet the check.

JOHN G. ESLER, Secretary
SADDLE RIVER, N. J.

Tarrytown, N. Y.

The regular monthly meeting of the Horticultural Society was held January 29. Owing to weather conditions the attendance was rather small. Abel Weeks, our new president, occupied the chair for the first time and made a promising start. The secretary's report on the annual dinner was very favorable and a vote of thanks was extended to Mrs. Driscoll of the Florence hotel for her hospitality. The prize for this meeting offered by James Stuart was for two primulas any varieties, and was awarded to Thomas Aitchison, gardener to Mrs. H. Siegel, Mamaroneck, who exhibited two fine specimens which also received a cultural certificate. A superb vase of White Killarney rose exhibited by F. R. Pierson Co., attracted much attention and was awarded a certificate of merit. Discussion on exhibits brought the meeting to a close.

W. J.

Newark, N. J.

BUSINESS IMPROVING.

The market has improved considerably the past week, and prices are all at a satisfactory basis. American Beauty roses are bringing 75 cents and in many cases $1 for specials. Bride and Bridesmaid are bringing 3 to 10 cents. Carnations are coming in steadily, and selling well. There are very few Roman hyacinths or Paper White, but yellow narcissi are coming in rather fast the last few days, yet holding a fairly stiff price. Tulips can be now had in all colors and move well from two to four cents.

McDonough reports a very busy week in funeral work.

D. A. M.

OIL CITY, PA.—Fire occurred at R. Reynders' greenhouses last week destroying the entire place.

NASHVILLE, TENN.—Applications were received for amendments to the charters of the D. S. Simpson Floral Co. of Bristol, seeking to change its corporate name to the Bristol Floral Co.

Attention!! Glass Buyers!!

Buy Now. Next Week May Be Too Late

Prices have advanced at factories, but we still have a large stock of fine quality **GREENHOUSE GLASS** bought on old basis, and which we are offering this month at ATTRACTIVE PRICES.

If you do not need glass at once, you can send a cash deposit with order, and we will reserve the glass for you.

Our Prices on Hotbed Glass Will Surprise You.

We Need a Man

Who knows **seeds** and **plants** in a practical way and who can write of them in good English. Ability to express himself in few words, easily understood, absolutely essential. Daily newspaper training almost indispensable. Good habits and capacity for hard work necessary. Working knowling of seed, nursery or florists' trade, experience in an advertising agency, and familiarity with type and other print-shop accessories highly desirable.

If there is such a man open to engagement, we can offer him the opportunity of a lifetime. Inquiries invited from persons who possess one or more of the stated qualifications.

The McFarland Publicity Service
Specialists in Horticultural Advertising,
HARRISBURG, PA.

Red Bank, N. J.

The first annual ladies' night of the Monmouth County Horticultural Society took place in Redmen's hall February 3. The tables were beautifully decorated and they were a revelation to the ladies. Thirty tables were set for progressive euchre and 35 prizes were awarded. At about 10 o'clock supper was served, speeches were made, songs were sung and general merry making took place. After the inner man was satisfied dancing began and about 150 were swinging their dancing apparatus and some of them must have had feet big enough to cover a square yard, as the writer of this is bearing the marks today—naturally ladies always excepted. It lasted until late in the forenoon, and somebody was heard to say, "I am sure we will be late for breakfast."

WORDS FROM TWO EASTERN MEN.

"Your Paint and Putty saved us, for the time being at any rate, a complete rebuilding. We used a barrel of the Twemlow Putty — it is great stuff."

"Your Twemlow's Old English Liquid Putty is certainly great stuff. Two winters ago there were two houses which the high winds shifted a little during a cold spell, which left quite an opening between the glass and the woodwork. It was zero weather and too cold to do anything outside. I was puzzled to know what to do. I took the putty bulb and went over it on the inside, just to tide over the cold weather, **but to my surprise** it staid and is as good to-day as if put on under the most favorable circumstances.

"I write this because it may be of some service to you to know it."

Montreal.

Trade last week was not very active which, no doubt, was due largely to an oversupply. Retailers are seemingly inclined to judge their trade by the amount of stock left over, not taking into consideration the unusually large and fine lot coming in. Roses are improving with the longer days and bright weather. Very little snow has fallen since New Year's. There is much complaint about sleepy carnations shipped by western growers, whole consignments on arrival have to be thrown into the barrel; others arrive in the usual good condition. There has been a good deal of discussion and investigations going on for some time but so far a definite cause has not been formed satisfactory to all parties. The growers claim that the goods always leave them in good condition and consequently will not stand for any loss. The best solution of the problem is to encourage home production as home grown flowers do not show the same fault.

At the February meeting of the Gardeners' and Florists' Club the lecture "How Plants Feed and Grow" by Prof. W. Lochead of MacDonald College, St. Anne de Bellevue, was the principal feature. The professor explained his subject in great detail, these details being shown with greatly enlarged charts or photographs. Harry Lang was elected a member.

Geo. Stanford is on the sick list.

CANON CITY, COLO.—I. F. Davis is building a greenhouse on his place at Lincoln Park.

MIDDLETOWN, N. Y.—Former Alderman J. J. Wood has sold his house and lot and an additional building lot at the corner of Washington and Spring streets to E. A. Lorentz. Mr. Lorentz buys the property in order to enlarge his greenhouses.

SOUTH BEND, IND.—An overheated stove in the new store of the South Bend Floral Co. 216 South Michigan street, started a fire that did $25 damage January 29. The snowbound streets made a fast run of the fire department impossible, still a serious fire was averted.

HIGHLAND, ILL.—Maurice F. Widmer has increased his glass plant by the addition of about 1,800 square feet. His carnations are exceptionally fine this year and business has been fairly good.

MILWAUKEE, WIS.—The Edlefson Leideger Co. sustained a damage of $10,000 in the recent storm. The razing of a chimney by the gale wrecked the greenhouses, breaking the glass, and causing many plants to freeze. The explosion of a boiler caused the temperature to drop, resulting in additional loss.

Sometimes You Forget

That we make every part of a greenhouse but the glass—that we sell any part.

You remember us on the bigger things, but often it never enters your head to think of sending to us for a tub of putty or a few fittings.

But you ought to— and here's why:

Our sole business is manufacturing every part of a greenhouse. We give it our undivided attention.

Everything we make is made with an exact knowledge of just what conditions it must meet, and that is why an ever increasing number from all over the country are continually sending us their orders for just the smaller things.

You know how well we do the big things, and if you will only stop to think, it is just because of well done little things, that it is possible for us to do so thoroughly and enduringly the big things.

So whether white lead, glazing nails, bench fittings, it matters not what, first write to

UNION, N. H.—Frank Varney is building a greenhouse to furnish bedding and vegetable plants in spring.

Louisiana Red Cypress

As described by Bassett & Washburn, Chicago.

"Replying to your favor requesting our experience with Pecky Cypress we will say we have been using this grade of Cypress in our greenhouses and plant benches for the last ten or twelve years and so far have not found any of this wood that has ab rotted out. We formerly used Hemlock and Pine, but found that two-inch stock only lasted about four years, while so far we have had no Pecky Cypress rot out in ten or twelve years. We use clear Cypress for all our roof work, ventilators, etc., and it is very satisfactory. We think it is the only kind of lumber for the purpose."

IT IS THE MOST DURABLE WOOD KNOWN. Ask about it at your local lumber yard or write

Albany N. Y.

At the February meeting of the Florists' Club, held at the establishment of W. C. King, Chas. Sanders, one of the members, had on exhibition a sample bloom of a new seedling geranium which he raised by cross fertilization about a year ago. The bloom shown was crimson in color, and in diameter measured a little over 4½ inches. Mr. Sanders said that the flower shown had been on the plant for six weeks, and was now beginning to wilt. The members present agreed that it was the finest geranium that they had ever seen, and inquiries arose as to whether there are other varieties as good in existence. It was not possible to answer the question at the meeting, and investigation may be continued. Mr. Sanders has selected the name Goliath, tentatively, for the new variety.

An interesting discussion on the use of fumigants, led by President Goldring, was held. Many of the members related their experiences with tobacco stems, which were reported to be getting worse all the time on account of the chemicals alleged to be used in curing the leaves. It was brought out that the use of tobacco stems has been discarded in this section in favor of nicotine dipped paper which is used extensively by the growers with fairly satisfactory results. J. H. Snyder, of the Violet Growers' Association, of Rhinebeck, threw considerable light on the use of potassium cyanide gas as a fumigant. The violet growers of Rhinebeck use it entirely, and with most satisfactory results. The association co-operates with a local manufacturer for the purchase of sulphuric acid in carload lots, and the cyanide is purchased in drums of from 5 to 20 pounds each for distribution among the members of the association. Mr. Snyder said that this means of disinfection had been found to be most effective.

The entertainment committee announced preparations under way for an informal banquet, to be held within the next three weeks. Among the building operations to be undertaken this spring as soon as the weather permits are: Wm. Hennell, Watervliet, two rose houses, each 30x100 feet; Henkes Bros., Watervliet, carnation house, 60x200 feet. The latter have lately finished a new house 28x120 feet, with concrete foundations, walls and benches. Concrete will also be used in the new construction.

The Grass.

Around the world once more your banners sweep,
O thou triumphant legion of the grass!
You shake the hill and valley as you pass;
Across the rivers and the seas you leap.
The music of your marching wakes from sleep
The forest and the field and the morass,
And in thy fragrant train, a starry mass,
The blossoms all like constellations creep.

What power is thine, O army of sweet peace!
To you at last all victories belong;
All battlefields are thine beneath the sun;
To every sorrow thou hast brought surcease.
What vanquished empire but hath heard thy song?
Answer, O Egpyt; answer, Babylon!
—Edward Wilbur Mason.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Shasta Daisies.

Seed of Shasta daisies may be sown now with every prospect of the plants flowering more or less this season, and at any rate they will form fine clumps for next year, either for flowering in the open or for lifting and forwarding under glass. The most ordinary details of culture only are necessary, and as the plants are perfectly hardy they will not take up valuable space for any length of time. Somewhat similar conditions suit the nearly related Pyrethrum roseum, as it is usually termed, one of the finest of hardy plants for cutting over a long season in summer.

Delphiniums.

Spring sowing of delphiniums is in many respects preferable to fall sowing. Seed sown now results in plants that, if carefully looked after, will flower more or less this season, but the chief advantage is that they will produce stronger roots, that are less likely to be lost during winter, than the small ones that proceed from fall or late summer sowing. Sow in a greenhouse temperature, and, as soon as the plants are up, place the pans or flats in frames, pricking the plants out in nursery beds when ready. Given good culture quite a number will flower sufficiently for the grower to form an idea of their value or otherwise, and they may then be propagated from or not as seems necessary. Good, clear, deep blues are the most popular for cutting, and are in every way superior to the washed out, pale forms sometimes grown.

Smilax.

Almost all cut flower growers need a bench or two of smilax, and if the supply is likely to be short new beds or benches may be planted now. Plant on good loamy soil and plant firmly. Small plants may be purchased out of 2-inch pots when the benches are ready or seed may be sown and the plants raised at home. It is one of the easiest of all plants to raise from seed and grow if kept clean. The best stock is grown in a cool, light house, a temperature of 50° at night being ample. Some growers so run their benches that they are always cutting their daily supply and allowing the plants to spring up again in rotation, so there is always about the same supply at hand. But where it can be arranged the plants are better for a short rest, and before putting new strings they should be allowed to attain a fair degree of strength, otherwise the product is likely to be thin. A top dressing of rich soil is a help, and a little soot improves the color of the foliage.

Pansies.

There is every probability that the weather will be brighter now and that the grower will be enabled to ventilate more freely the houses or frames devoted to pansies. This abundance of air will give stamina to the foliage and the flowers will come of better color and with more substance. As a rule very little feeding is necessary, but on very light soils a little fertilizer may be applied and stirred in. In any case keep the surface soil loose and remove bad foliage. Allow no flowers to go to seed and keep up a cool buoyant atmosphere about the plants.

Gardenias.

Bud dropping is one of the most troublesome details to the grower of gardenias in winter. It is misleading to read the many causes which are given for this. The cause must always be looked for at the roots, provided, of course, there was no extraordinary cause in the atmosphere such as frost, and this would injure the foliage as well. If there is a proper reciprocal action between the roots and the growth all will be well. But if by over or under watering, overfeeding or some other backset to the roots, these are prevented from sending up proper supplies to the stems and foliage then the most vulnerable part of the plants' system, the joint between the growth and flower, gives way and the bud falls. Endeavor then to so manage the roots that they are always healthy and always extending. Roots are not caused or enlongated by moisture; they are put forth by the plant to look for moisture and other elements necessary for the building up of the leaves, stems and flowers. As long as it is seen then by the rapid growth of the plants and by the bright feeding tips of the roots that moisture and food are being vigorously searched for, then all is well and the

feeding and watering may be maintained. But when the growth is checked, when the feeding points of the roots are dull, with, occasionally, brown tips, then something is wrong and the next bright day one will see the buds falling off wholesale when spraying takes place. And circumstances differ so in different places that this is about all one can say to the grower; he must, before he can be thoroughly successful, be so in touch with his plants that he can tell, before the fact is apparent by any backset that is visible to an ordinary observer, that all is not as it should be with the plants. He will then alter his treatment as seems necessary. Where a constant supply of flowers is needed from now on a night temperature of from 65° to 70° with ample atmospheric moisture will be about right. The flowers must be kept regularly cut or they soon turn color and wilt in the moist heat.

Dahlias.

It is early yet for the ordinary propagating of dahlias but there are usually some varieties of which stock is short and the roots of these may be taken out of their winter quarters and placed over a gentle warmth. For propagating purposes they may be planted fairly thickly on the bench and a little light soil placed around them. Large clumps may be divided into as many pieces as necessary by cutting between the tubers, carefully avoiding injury to the crowns or dormant eyes. A bottom heat of 60°-65° is ample to start them and the air temperature of the house may be a little lower than this by night. Young shoots produced this way are firmer and better suited for propagation than if grown in a stronger heat. The shoots may be taken off when about three inches in length and will root freely in sand at a bottom heat of 70°-75°. Thus by taking the shoots early and again allowing them to break and selecting the second shoots and repeating a large stock may be worked up in a short time. Dahlias may also be easily raised from seed and if the seeds are sown now plants of the single and decorative classes at least may be raised in time to flower well this season. Sow the seed very thinly in small pans or flats and cover lightly. Place them on a gentle heat and keep the soil moist. The seedlings will soon appear when the pans containing them must be lifted out and placed in a good light and at a temperature of 60° by night. Growth will be rapid and after potting the seedlings and getting them established, the temperature should be gradually decreased, to keep the plants sturdy.

Bouvardias.

Bouvardias flower most freely in a temperature of about 50°-60° and if the roots are just a little warmer than the heads by night it is an advantage. To keep the growth free, without which few flowers will be produced, the heads must be freely sprayed whenever possible. The spraying should be done after cutting the flowers though they are not so readily injured as are some others if the water is clean. Keep plenty of air on the house in which they are grown and practice no coddling treatment. Propagation is in order now, either by means of the strongest portion of the roots cut and placed over a little warmth, or cuttings of the new wood. The latter is the simplest method and equally as satisfactory as the root plan. Where a few plants can be spared cut them back fairly hard and place them in a brisk heat. This will cause them to break freely into growth and as soon as the young shoots are an inch or so in length they may be made into cuttings by removing the lower leaves and inserted in the propagating bench. Care is necessary not to allow them to wilt before being inserted and they must be watered in at once and kept moist until rooted. A close propagating case will root them more rapidly, but they do very well on the open bench striking as freely as fuchsias. Cuttings rooted now will make fine stock for planting outside in May to be lifted for flowering next winter or for growing on under glass, according to locality and convenience.

THE RETAIL TRADE

CLEAN windows should always be maintained. Stock never looks well through cloudy ones.

THINK up some new ideas for Easter for it is going to be the largest trade ever.—Get busy.

Now that we have done honor to Abraham Lincoln, let us prepare for George Washington. Remember he cut down the cherry tree.

J. F. SULLIVAN, Detroit, Mich., sent out a very attractive St. Valentine's day folder, a pretty girl with picture hat and "valentine greetings" outside with suitable wording inside. A very neat and telling design.

The Window as an Advertisement.

We are today confronted with the problem of advertising. Every branch of trade has been compelled to go to it and as a result vast sums of money are expended in that cause yearly: How often do we hear the questions asked, "What is the best medium?" and "does it pay to advertise?" It surely does pay. As to the best medium, there is no better one than your windows. Men, women, and children are ofttimes held spell bound by them, providing you are up-to-date, and this, in order to be successful, you must be. Change your windows every day, giving the people something different to gaze upon and talk about. This they surely will do providing you give them a chance. Ofttimes a man or woman on their way to business in passing by your shop will be attracted by a something in your window, and upon meeting their friends will ask, "Did you see that florist's window up the street?" If, perchance, they have not, it is safe to believe they will before they go home.

The window which attracts the most attention we have found not to be the one with a conglomeration of stock in it, but rather the one with just one large vase of American Beauty roses, or a design or basket of some sort. We know of some stores in the east where they have as mascots a couple of Angora cats, which are great drawing cards for we have seen crowds gathered around these windows for hours at a time; this illustrates what simple things will do. Make every dollar that you spend on your windows a winner, and this is bound to be the result if your windows are attractive. Presuming there is but one window: At this time what could be more showy for Monday than a window of yellow tulips and forsythia for Tuesday? Cover the floor of the window with smilax placing a large basket of Roman hyacinths in the center having them falling out onto the floor. On the handle of the basket tie glasses, filling them also with hyacinths, working in a handsome bow of foliage green ribbon. For Wednesday, a basket of daffodils worked in the same fashion with a black bird on the handle appearing as if it had just alighted. Thursday a border of violets around the window with a large vase of American Beauty roses, Friday fill the base of the window with plants of Adiantum Farleyense and in the center place a large vase of Longiflorum lilies. Saturday's window, lilies of the valley and violets.

Always keep in advance of the times preparing ahead for holidays, of which Washington's birthday is the next. For this occasion drape your window with the national colors, get an old stump of a tree and an ax in the center of the window, the bust of George, and on either side vases of cherry blossoms. Nothing, perhaps, makes a more attractive window at this time of the year than fruit blossoms, and when one stops to think of the ease in procuring the same, we wonder why they are not more freely used. Such windows as these are very apt to catch the stranger to the city who will remember the shop and go home telling the folks of what he saw. Get the people to talking about you then are you advertised.

When closing the shop at night don't strip the windows of everything but place in the center a handsome fern or palm. Another important feature which is sometimes overlooked is that of doing the work in a back room or in the cellar; this is a big mistake. When making a design or a bouquet or putting up a box of flowers get to the front, let the people see what you are doing, for the people that stop to look will some day be your customers. Never overlook in your city any big show or convention. Take some recognition of them, for flower buyers are everywhere and whatsoever effort you make is appreciated by them. Remember always keep in advance of the times and never repeat if you can help it. The branch of an old tree covered with Florida moss and small vials filled with cattleyas suspended in your window with an occasional plant of cattleya and A. Farleyense will make a very striking and rich window. Another window that is bound to cause comment in February, is to cover the base with smilax and place a vase of peach blossoms in the center. For a striking window, encase it with black velvet working vases and sprays of O. P. Bassett carnation through it. Crowds will be gathered about your shop all day.

C. A. SCHNELL.

The Merry Widow Hat Design.

SEE SUPPLEMENT WITH THIS ISSUE.

The Merry Widow hat is constructed by using a plateau basket, that is, a small round basket fastened on a flat one, the whole being covered with velvet. In the small basket a close fitting tin is placed, and the plant is practically potted therein, soil being firmed around its roots, the same as in potting. In the illustration, erica is the plant used, but other plants may be utilized to suit the fancy of the designer. In the hat illustrated orchid ribbon is used for trimming, but the shade of ribbon used may depend on the color of the flowering plant, and the same may be said with reference to the velvet covering of the hat.

THE MERRY WIDOW HAT DESIGN.

THE FLEISCHMAN CO.'S WINDOWS, JACKSON BOULEVARD, CHICAGO, FOR THE LINCOLN CELEBRATION.

Celebration Windows.

As we briefly announced in our last week's issue the Fleischman Floral Co., of Chicago, had very fine window decorations for the Lincoln celebration and we present this week an illustration of them. During the time these windows have been in they have been much admired and freely commented on. Other good means of advertising by window displays are noted in the excellent article by C. A. Schnell on the opposite page.

Flowers in the Chicago Stores.

The most noticeable feature in the cut flower situation has been the great scarcity of American Beauty roses. For years, growers and retailers say, they have not been so short of good flowers and even the short stemmed flowers and culls have, in many cases, been hard and poor in color. But there is a big cut in sight in some of the large growing plants and the scarcity will soon be relieved. Richmond has by no means been in its best form. The color is there, but the flowers have been small and cut almost as tight as in summer. There have been some good flowers of Cardinal, the one fault of this charming rose being the fact that in winter, when little air is given, the color fades or blues a little. White roses have also been scarce and growers are looking forward to the time when white Killarney will be plentiful enough to become a factor in the market.

The bulb stock, especially tulips, has helped out considerably this season. Not nearly as much has been grown as in former years. Growers have found a better demand and, although with the dearer varieties of tulips the prices obtained show only a very small margin of profit, yet there has not been the wholesale slaughter that has occurred in other and recent seasons. Growers will, however, be wise not to bank much on these conditions continuing another season and will watch for the backward swing of the pendulum. Freesias of the ordinary variety of refracta have been plentiful, but there is a fine white variety in the market that is far superior and this is not too plentiful by any means. Lilies have been up and down; the stock has been excellent but over plentiful at times. The demand for the Lincoln centennial caused quite a demand for these and for carnations which made a hole in the stocks at the end of last week.

Carnations are not quite as plentiful as they were, but there is no particular scarcity. White Perfection and White Enchantress are the standbys and both are in fine shape and some of the fancy and variegated varieties that are not at their best at midwinter are now showing fine form. The reds are good in color, fine in stem and fairly plentiful. Orchids are in good shape, fine flowers of Cattleya Trianæ and C. Percivaliana being shown. Gardenias are close rivals of the cattleyas and both tend to lower to a great extent the status of the violets. Apparently good double violets have shortened rather than the other way, or possibly the demand has been better. At any rate the glut is not nearly as pronounced as it was. Singles are plentiful and good.

Among minor stocks there has been some very nice clear yellow antirrhinums that help out considerably. Lily of the valley has been plentiful. Mignonette is of varying quality. Some of the spikes are thin and poor, but there are also many fine ones, evidently the first cuts from late sown plants, thick substantial flowers of fine character. Bridal wreath (spirea) is good, while pansies, lilac, bouvardia and others are shown, and there is still some of the useful stevia. Quite a number of pot plants are shown, including good azaleas, cyclamens and primulas of sorts, while the lightly forced magnolias have quite a following. Business is apparently in a healthy condition and promises to continue so. The windows of the principal retailers on the occasion of the Lincoln celebration were a credit to all concerned.

The Rosery, Kansas City, Mo.

The Rosery is located in the heart of the best residence district of Kansas City some 20 blocks from the down-town stores. This establishment, representing an outlay of $22,000, was built with special attention to attractiveness and harmony of its surroundings. The store, of buff pressed brick 20x36 feet, is set back 12 feet from the sidewalk allowing space for lawn and flowers. The conservatories, three in number, were built for show houses rather than for growing purposes; they cover an area of 5,000 square feet and adjoin the store directly in the rear. These are stocked from many small growers who have no particular market for their goods. Adjoining the rear of the greenhouses is the shop, spacious enough to contain the stable, wagon room and potting sheds. Natural gas is used for fuel.

The Rosery caters to the best retail trade in all its branches. The cut flower department, in charge of Mrs. E. D. Ellsworth and three clerks, showed a 60 per cent increase over 1907. The decorative work and plant business is handled by E. D. Ellsworth, president and manager, who has been associated with the florist trade in Kansas City 18 years.

Six men are employed to handle the spring planting which includes shrubbery as well as bedding plants and 40,000 fall bulbs were planted in 1907, the first year of business.

WITH THE GROWERS

Poehlmann Bros. Co., Morton Grove, Ill.

It is a busy time just now at the great plant of the Poehlmann Bros. Co., Morton Grove, Ill., not only with cultural details but also with the new construction work in progress. A large block of new houses is being added to the B plant. 13 of the large structures built in conformation with the plan of this great range, 27x350 feet each. The first 11 houses are roofed in and several are already glazed, while the gutters and supports of the other two are in position. Steel posts are run at 5 feet 6 inches apart to support the gutters, the highest part of which is in the center, falling each way, and two down spouts on each side are provided to carry off the water. Garland's iron gutters are used throughout. Wm. Mailander, the local contractor for this kind of work who has the work in hand, speaks very highly of the Evans ventilators, of which 80 are used and points out the excellent construction of these from a mechanical point of view.

The lumber, sash bars and vent sash are from the John C. Moninger Co., Chicago, and the contractor speaks very highly of the accurate fitting and quality of the material. The first two houses are supported by purlins and iron pipe supports but August Poehlmann says he thinks of using a truss construction for the remainder, not so much for the extra strength or rigidity but in order to have the uprights out of the way in the houses and to do away with the decay of these where they come in contact with soil or bench. The glass used is 16x24. Two Racine boilers are already in place and are being bricked in. They are of the tubular pattern, each having 150 20-foot tubes, and each of 60 h. p. capacity. Their installation had been looked forward to so there is ample room in the shed for them and also chimney room, this having been built sufficiently large when the rest of the range was in hand.

At the A plant another large addition is to be made and on the morning of our visit August Poehlmann closed a contract with the Wieterhold Construction Co. for a $38,000 chimney of tile and cement reinforced with steel. The steel bars will run up and down and at the foot of the chimney will spread laterally, like the roots of a tree. Besides this what may be termed iron belts will be placed in each course of cement blocks, the space being filled around with concrete which will tie the whole thing together both ways. The chimney will be nine feet inside and the foundation will be 22 feet square and eight feet deep. This chimney will be large enough to take care of 600,000 square feet of glass and boilers of 2,000 h. p. capacity, which will enable the firm to build quite extensively without any other chimney being needed.

CARNATIONS.

A look into the large carnation range showed the stock in the usual fine order. An immense cut has been taken this season and there are still a great many flowers of fine quality. Victory, in red, still has pride of place here as it is found to ship better than Beacon which is perhaps, rather more free. The color of Victory, too, has slightly the advantage and this fine variety has been remarkably well grown at Morton Grove ever since its dissemination. The new O. P. Bassett is to be extensively grown this season. In pinks Mr. Poehlmann thinks very highly of Winona, which he says has come to stay. Rose Pink Enchantress will be done away with as it has not proved capable of keeping up with the high standard set here. The old Lawson will still be grown in quantity as, with all the host of new candidates for favor, it has no equal as a long distance shipper and as a Christmas pink carnation, being a sure and free bloomer around this holiday. Mr. Poehlmann also thinks very highly of E.

E. D. Ellsworth.

Pres. and Manager The Rosery, Kansas City, Mo.

T. Grave's May Day and will plant it extensively, while the seedling shown by Nic Zwiefel of Milwaukee at the Indianapolis convention he has high hopes of as it is much clearer in color than Rose Pink Enchantress. Lawson Enchantress has been found too soft at Morton Grove, though, as Mr. Poehlmann points out, it has been found perfectly satisfactory in other places. Other well known kinds, such as Winsor and Enchantress are to be largely grown.

In whites, White Perfection still leads here, there being more of it grown than of any other variety, though White Lawson is also extensively planted. The young stock is looking fine, bench after bench of splendid plants without a single plant being missed. There are already many thousands potted some 300,000 being needed for home growing besides another 300,000 or so for the shipping trade. All are in the same excellent condition, for nothing that is not good enough for planting in the place here is good enough for shipping out. The plants of all the popular varieties have been cut hard for cuttings but there are still many more and all healthy, clean and strong as the produce of vigorous stock always is. It is too early yet to say much about chrysanthemums but the benches of stock plants look remarkably clean and strong and propagation is going on briskly. As indicative of the way they are handled we may note that no less than 14,000 Monrovia and an equal number of October Frost are to be propagated this season with other popular kinds in like numbers.

AMERICAN BEAUTY ROSES.

There was not a heavy cut of American Beauty roses at the time of our visit. The majority of the plants are grown at the A plant in quite small houses but whether it is the proximity to the manure pile of 80 carloads capacity or for some other reason the plants are in splendid order. They had been rested slightly and were setting buds on every shoot. Referring again to the manure pile the bottom of this is concreted to prevent the water running away and all fresh manure is dumped in on top of this so it retains all the strength. The rose benches were being treated to a liberal mulch of this and if odor counts for anything there should be some driving power behind it. The plants were clean, the foliage excellent and gave promise of an enormous cut of fine flowers.

TEA ROSES.

These are grown principally at the B plant and their condition at the time of our visit was of the best. Killarney and Richmond were in great shape, the growths good, the flowers perfect and promising a remarkable cut. Bride and Bridesmaid, Perle, Mrs. Potter Palmer, Chatenay and others are excellent and we were interested in the benches of Cardinal which were producing fine, substantial flowers of very fair color. Adolph Poehlmann gives this rose a fine character as a summer flowering red and it has more than come up to his expectation this year as a winter bloomer, though, in the latter respect, it has to give way to Richmond. In summer, when the flowers of Richmond have to be cut extremely tight, those of Cardinal are at their best both in color and substance and may be cut more open than any other summer rose according to Messrs. Poehlmann's foreman. The old Bon Silene we also noted doing well and quite a large batch of it was grown. We were disappointed in not seeing My Maryland, in better shape, the plants having been cut over hard for propagating. But it is highly thought of here and every bit of wood is being used for this purpose.

Propagation was going on briskly, some 15,000 out of the 45,000 plants annually grafted, having been already worked and many of them out of the cases and growing away well. Apparently there were no failures. In all the long line of grafting boxes we did not see a single plant that had failed to callus, all looking alike, healthy and green. We noticed that care was taken to have the manetti stocks well started before they were put into the cases for grafting and doubtless this, with the fine wood used and the excellent culture given, helped materially to this satisfactory state of affairs. Besides the grafted stock about 200,000 own root plants are raised annually and this big job was well in hand and the plants looking equally as well as the grafted stock. The whole of this B plant in fact was in excellent order, as it always is, and a great credit to the manager, Adolph Poehlmann, and his staff of capable growers.

Bringing Lilies into Bloom for Easter.

Details vary considerably in the methods of growers perhaps equally successful with Easter lilies, and in this article we do not care to disparage any favorite detail of any other grower but merely outline the scheme that has been most successful with ourselves.

In the first place we have come to depend most largely upon Lilium giganteum (Japanese), as we find we can depend better upon the bulbs coming true to name. We have not been as successful with L. multiflorum, the bulbs that have come to us usually being mixed. The true L. multiflorum, however, is a grand variety and to be recommended if the bulbs can be guaranteed to come true in any large proportion of an order. L. Formosum is also an admirable lily but varies like L. multiflorum and we find that under the same treatment the plants will vary from 18 inches to five feet in height.

ONE OF THE GREENHOUSES AT THE ROSERY, KANSAS CITY, MO.

We usually plant the bulbs in November. They can be planted earlier, but with no material advantage. December planting will also bring good lilies for Easter, coming as it does this year on April 11. Later planting than this would not be advisable as the bulbs should have plenty of time for rooting. Plant the larger bulbs in 6-inch and the smaller ones in 5½-inch pots. Azalea pots will do in case the grower runs short of the above sizes. Drainage is not necessary as overwatering is decidedly dangerous, and we find the tendency is to overwater rather than the reverse. We plant in virgin sod, well mixed with but a trifle of well-rotted cow manure.

During the fall and until well rooted they should be kept cool, preferably around 45°. They may be kept under the benches of a good, cool house, or in a lighter place if covered. Early in January they should be set on well drained benches and given an average night temperature of about 62°, not cooler than 60° nor higher than 65°.

If the above conditions have been complied with the plants will run about eight to ten inches tall at the present time. If they have been allowed to run away from the grower and have reached 12 to 18 inches, they should be kept just a trifle cooler, but we do not like either to retard or force until after the buds show. If the plants are put into too cool a temperature they will be found hard to start up again and bring into bloom in time for Easter. Usually it will be better not to vary the temperature much until the buds are an inch or an inch and a half long. Plants that are not much more than showing above the soil now should be placed at the warm end of the house.

We neither feed our plants nor shade the houses they are in. They should be frequently syringed to keep off the lice and for green fly we spray with some good liquid insecticide about once a week. If a green fly once actually shows his head we spray twice a week until he disappears.

Keep a close eye on the roots; white roots indicate a good healthy condition of the plant: if the roots turn dark the plants have been over-watered and should be put on the dry side. But in this case, prevention is better than cure. Plants from now on should not be allowed to actually dry out, but the danger is usually in the other direction.

According to the older method buds should show fully six weeks before Easter, but we find that four weeks before is plenty. Keep the plants carefully graded, shifting as often as necessary to give the shorter plants the advantage of the light they can get on the sunny side of the benches. About four or five weeks before Easter sort out those most advanced and keep in a temperature of 50° at night and same in daytime if the weather will permit. Run up the backward ones to 65° at night and 75° by day. The plants should not require shading unless, as sometimes happens, they are suddenly found to be too far along.

GROWER.

Treatment of Oleander.

ED. AMERICAN FLORIST:—

I have an oleander eight feet high that for four years has stood in the lobby of an office but never blooms. It is now in my greenhouse in full light. I want to get it to flower and also to root some cuttings. Can I do this? F. J. A.

Keep your plant in a warm greenhouse and encourage it to grow freely by giving plenty of water and feeding. When a free growth is made it will not fail to flower but in draughty places in corridors and lobbies the flowers fall off instead of coming to perfection. Cuttings root easily if placed in pots or benches in sandy soil and kept always moist.

Green Worms in Greenhouse.

ED. AMERICAN FLORIST:—

Some green worms that were on my snapdragons are now getting on the sweet peas. There are moths in the house. I used two jars of acid, putting four ounces of cyanide, eight ounces of acid and 16 ounces of water in each, but it did not destroy them. I have used the same amount effectively on white fly. What is the trouble? The house is 20x100 feet. M.

Evidently your insect visitors are proof against fumigation. Try hand picking and poisoning. For the latter use some green succulent foliage, such as lettuce, dipped in a solution of Paris green, placing the foliage on the benches and about the plants in the afternoon. Four ounces of Paris green to five gallons of water will be suitable for dipping the foliage in. Spraying the antirrhinums and sweet peas with a weaker solution of the Paris green is also likely to be helpful. G.

RETAIL STORE OF THE ROSERY, KANSAS CITY, MO.

CHRYSANTHEMUMS

Propagation.

In last week's notes we concluded with the cutting bench ready for cuttings. With ample stock to cut from these are usually allowed to remain on the plants until a cutting three inches long can be taken. Shorter cuttings may be used but there is no great advantage as they grow more rapidly on, than off the plant. Single eye cuttings are sometimes used to increase stock of scarce sorts, these being wired to toothpicks and placed in sand so the end of the cutting is under the surface, the object of the toothpick being to hold the cutting in an upright position. This method is only advised in rare cases where stock is limited.

The accompanying illustration shows a cutting as it is when cut from the stock plant and one trimmed ready to insert in the sand. The cuttings shown were 3½ inches long, one of which having the lower leaves removed and the largest ones at the top slightly headed back, so there is less leaf surface to sustain. With the cuttings ready a cut is made in the sand with a table knife running across the bench to the depth of an inch. In this cut the cuttings are placed from 1 to 1½ inches apart according to the size. With the first two fingers the sand is gently firmed around the cuttings to hold them secure. The next cut is made from two to three inches from the preceding according to the size of the cuttings. This operation is repeated until the cuttings are all in position, and when given a thorough watering the operation is complete.

Air and moisture are of the greatest importance from now until rooted. Abundance of air (not strong drafts) should be given at all times, except in very severe weather when the temperature may fall too low. Through the winter months one good watering each day will usually keep the sand saturated but as the season advances it is sometimes necessary to repeat this operation several times to prevent wilting, and in very warm weather the entire house, sides and roof, are sprayed to lower the temperature. There is no fixed rule as to temperature, in fact they will root without bottom heat, but it requires a great deal longer time. Those who propagate in quantity usually endeavor to keep the sand at from 60° to 65° and the overhead temperature about 10° less. The time required for roots to appear varies according to the condition maintained and the variety being treated. Golden Glow will root in 10 days while Maud Jeffries will require three to four weeks under the same conditions.

ELMER D. SMITH.

CHRYSANTHEMUM CUTTINGS—TRIMMED AND UNTRIMMED.

Notes on Aquatics.

The season is now here when something more than thought must be given to our future plans for the coming season in our flower gardens. Every season should leave some experience gained for future improvement, and now in planning for the coming season these points will be of great benefit. Water lilies will never be eliminated from the flower garden, large or small, but the fascination is so great that, even on a small scale, the temptation to crowd in too many plants is almost resistless. One, two or three varieties are preferable to a collection of numerous kinds, and where space permits it is better to plant several plants of a kind than single plants of different varieties. It is a matter for each individual to select a number of varieties according to space to be planted and a combination of both hardy and tender nymphæas and nelumbiums, together with other aquatic plants, makes a very pleasing and ornamental sub-tropical water garden; but never crowd the plants or cover the entire surface of the water.*

Raising plants from seed may be resorted to at once. Nymphœas of many kinds can be raised from seed, though, to the disappointment of many, a very large percentage of hybrids, especially of the hardy varieties, produce no seed. This explains why seed is not offered. Seed of hardy nymphæas should be sown as soon as ripe; the seeds will not permit of being dried or they lose their vitality. The tender nymphæas are probably the most satisfactory to raise from seed, and the day flowering varieties are preferable to the night flowering, but as nymphæas require considerable space for development some restrictions are necessary according to space at command. Naturally a greenhouse is the best structure to raise seedlings at this season of the year, although I have heard of seedlings started in a teacup in a dwelling house with very satisfactory results. Light and sun are essential. Water lilies cannot be grown in the shade; also warmth, a water temperature of 70° to 75°, atmosphere 65° to 70°, as tender night blooming nymphæas require a higher temperature. In either case the higher temperature should prevail only with sunlight and fresh air. Water is absolutely necessary. Nymphæas and other aquatic plants cannot be grown like other flower seeds. The pans, or other receptacles, must be submerged in water. To those possessing a greenhouse it will be an easy matter to construct a suitable tank in a corner or a part of the bench, if not already on hand. The tank should be six inches deep, any desired length, but must be of metal or metal lined and exposed to the action of the heating pipes. These should be boxed in to retain the heat similar to the propagating bench. A tank of this kind will accommodate both seed pans and plants in 3-inch and 4-inch pots.

Plants are fit to plant out in summer quarters when established in 4-inch pots. When necessary to have a part of the tank at a higher temperature a division board across the tank will suffice, and a small lamp stove under that section will raise the water temperature many degrees. The seeds of tender nymphæas of the day flowering varieties, such as N. Zanzibariensis and N. Zanzibariensis rosea and azurea N. cœrulea and N. gracilis, germinate very readily, but there will be generally more or less variation in size and color of the flowers. N. gracilis varies much unless saved with great care, as it is very susceptible to cross-pollination by insects, especially when grown in proximity to any blue variety. This is applicable alike to night-blooming varieties, probably more so. I have found a larger range of size and color amongst these and have abandoned this method of propagation where it is necessary to obtain a variety true to name and catalogue description. Seed pans or pots of various sizes may be used according to quantity of seed to be sown. Prepare the same as for other flower seeds save in the use of peat. Any other good potting soil will do, but it should not contain manure that will ferment.

Cover the seed with sand or sandy soil and place in the water, but do not submerge for two or three days. The seeds being dry when sown would rise to the surface and cause loss and annoyance, especially if there are two or more varieties, but after two or three days the seeds will be well soaked and will remain stationary. When only a few plants are wanted sow the seeds moderately thin and the plants can remain in the pans until floating leaves appear and the plants large enough to be potted into 2½-inch or 3-inch pots, and later on, when the plants are well rooted into 4-inch and 5-inch thence into their summer quarters. When seedlings are too thick, thin them out or prick off into pans previous to potting. Nelumbium seed may also be sown, but before doing so file through the hard shell at the base and insert each seed separately in 3-inch pots, placing the cut end uppermost. Victoria seed may yet be sown. V. regia requires a temperature of 90°. V. Trieker 70° to 80°. I would not subject young plants of the latter to a higher degree than 75°, otherwise the plants will be weak and sickly. Tubers of all tender nymphæas may be started in March under precisely the same conditions recommended for raising plants from seed, but they will not require so long a time to develop.

W. T.

*The writer would willingly comply to any request to make selections of suitable varieties of plants for any given size of pond, pool, fountain basin or tubs.

Illinois State Florists' Association.

Fourth Annual Meeting, Springfield, February 16-17.

Tuesday Afternoon Session.

For the second time Springfield welcomed the Illinois State Florists' Association for a two days' meeting, February 16-17, and the snowstorm that accompanied the arrival of the visitors was a matter of comment for its coincidence with the blizzard of a year ago. But for this storm which began to gather the day before the gathering, the attendance undoubtedly would have been considerably larger.

The St. Nicholas hotel, the headquarters of so many of the trade as could find accommodations there, is directly across the street from Arion hall where was staged the exhibition, and in one of the rooms of which the sessions of the convention took place. The hall, large and roomy, presented an attractive appearance considerably before the opening hour. Three tables, running nearly the full length of the long hall, staged all the cut flower exhibits and some of the plant displays, and around the walls were other plant exhibits and the building trades, the boiler men and dealers in retailers' and growers' supplies. Not a small part of the decorations and displays presented by the hall were the banners of leading firms in various lines. The carnation men seemed much in the preponderance among the exhibitors, many fine vases of new and standard carnations being seen; in fact, two of the three tables were nearly monopolized by this grand flower.

The meeting was called to order by Chas. E. Hay, of Springfield, who introduced Mr. Murray who welcomed the association on behalf of Mayor Reece who had been scheduled for this part. Geo. Asmus, president of the Chicago Florists' Club, responded on behalf of the association. President Albert T. Hey then assumed the chair and named the following committees:

President's address.—W. N. Rudd, Geo. Asmus and E. W. Guy.

Auditing committee.—P. J. Foley, A. C. Brown and A. G. Fehr.

Judges of exhibition.—F. L. Washburn, Peter Olsem and Geo. A. Kuhl.

Sergeant-at-arms.—Otto Larson.

President Hey then read his annual address, as follows:

President Hey's Address.

In greeting you this afternoon I bid you welcome to our fourth annual convention. It is a pleasure to meet so many of the members of this association and it certainly proves that our organization is gaining ground. I do not think that at this time it is necessary to take up your time with any long address as there are many things of interest to place before you.

But there is one thought I wish to call your attention to today. One year ago an invitation was extended to our association to meet at the home of Lincoln, it being the centennial of his birth and it is but fitting as we are now gathered together that we pause from our labors a little while to pay a tribute to his memory, under the shadow of his tomb whose shaft points to the everlasting skies. We are assembled together to work for a cause that has for its aim and object the development of higher ideals and love for the beautiful in nature and so may each one of us exemplify in our life the lessons he taught, that of plucking a thistle and planting a flower wherever he thought a flower would grow. I would therefore recommend to this association, in honor of this occasion, that we deposit at the tomb of the immortal Lincoln a floral tribute in memory of him who lived with malice towards none and with charity to all.

THE EXPERIMENT STATION.

Since we last met, the experiment station of which we are so justly proud has been completed and I can say it does credit to our advisory board and to the college officials for the manner in which they have taken hold and completed the task given them. The association can feel proud of it. We have now at the University of Illinois as fine and complete a plant in every detail for experimental work as can be found in the country. I only wish that each member of this society could see it for himself, for then only can he appreciate the work of this association, as it is an achievement of which every florist in Illinois should be proud. This initial movement has been watched with great interest from other states and under the management of Prof. H. B. Dorner, who is an enthusiastic worker in the cause, we expect to get results that will be of utmost importance to our association and the trade in general. The secretary of our advisory committee will give you a detailed report of the work. Now, I wish to impress on the members here and the trade in general, that just because we have this station established we cannot fall back and rest upon our oars. It just means as much work as ever it did. This year we are going before the legislature for an annual appropriation of $17,500 to carry on the work. We need to increase the plant to carry on other experiments. Out of our last appropriation of $15,000 we were barely able to build the plant and get it in working order, but the college officials saw that our work was of vast importance, generously came forward and out of the college funds donated the magnificent sum of $5,000. Too much credit cannot be given the officials of the university for the interest they have taken in the work. They have shown their willingness in every way to help, for which the association cannot but express their gratitude.

Many of you may think that this is a large sum of money to spend, but few realize the vast amount of detail in connection with the getting up of records, compiling literature on the subjects to be treated, references, etc., and getting a thorough ground work to build on. Remember that we had nothing of this kind in the country before. Now, this has all been done and we can truthfully say that in this work Illinois takes first place in the front rank from a floriculture standpoint. Now let every member of this association put his shoulder to the wheel and help to get this appropriation. I have appointed J. F. Ammann, our secretary, to represent this association on the legislative committee and any help you can give him will be duly appreciated.

CENSUS.

The action taken at our last convention on the census of floriculture bore fruit in that it was taken up by the national society and it is now working in conjunction with the census bureau at Washington. The committee recommended a plan, simple in detail, that can be filled by every florist and we expect when the census of 1910 is taken it will show a far more complete record than it was ever possible to get before.

In compliance with the recommendation of the association at its last annual convention our secretary has sent out blanks to be filled, giving glass area, etc. This has met with a favorable response, but is not yet complete. We fully intended to give to you complete statistics of glass in Illinois at this meeting, but this seems to be very hard to accomplish. We need these statistics for our legislative committee and all those that have not responded will kindly do so. In order to complete this it will be necessary for someone to canvas certain sections of the state and I cannot recommend anyone better than our present secretary, and as this involves time and money I would recommend that his expenses be paid.

THE STATE FAIR.

Through the efforts of this association we were enabled to make a better showing at the state fair. I called your attention to this matter last year and wish to again remind you that there is still room for improvement. The schedule needs revision to bring it up to date and I think the time has arrived when this association ought to take some action in getting an appropriate building for the floriculture exhibition. I would therefore again recommend that a committee be appointed on floriculture at the state fair.

I think that the association would be much benefitted by having the different floral centers of the state represented by correspondents with whom the secretary or president could keep in touch. "What is everybody's business is nobody's business" and it has often been difficult to get information that is needed. I would suggest a similar plan to that of our national society and I think it would prove of great value to get for our records a complete statement of our business. This will be especially valuable in furnishing data for our legislative work and other things which our association will need for its future development. These correspondents should be kept supplied with our literature and other matter and could aid the association greatly in increasing its membership.

We have, as per our constitution, seven vice-presidents, and in appointing these it should be with the understanding that they accept the office with a certain specific duty to perform. I would therefore recommend this idea for your careful consideration. At the last convention the association recommended that certificates of merit be issued to all exhibits worthy of the same. It is hoped that this will bring out a better show. I have therefore requested our secretary to provide them and the same will be given out by the judges of exhibits.

SCHOOL GARDENS.

I believe our association, through its members, should take an active part in the different localities in promoting the interest of school gardens and children's flower shows. This movement is growing and the association should recommend it and I think it would be a good plan to get up a simple premium list and offer a special certificate of merit. This is an inducement and encourages the growing of flowers, etc., and the beautifying of homes; also for the best essay or paper on gardening by children of the public schools. I would recommend that a committee be appointed to take this matter up.

I am of the opinion that this association, representing as it does the floral industry of the state, should take some action in the matter of a state flower. Several of the states have by legislative enactment recognized some flower as their floral emblem and I believe that this society should go on record and recommend to our legislature some flower that is indigenous and appropriate for Illinois.

In conclusion I wish to thank you one and all for electing me the second time as your president. Our relations have been most harmonious. Everybody has worked for the common good. To the university officials I wish to express my sincere thanks for the many courtesies received and as to our secre-

A. C. Brown, Springfield, Ill.

Chairman of Entertainment Committee, Springfield Florists' Club.

tary I cannot say too much for him for his many kind acts and the generous donation of his time to the cause. He is not only entitled to my thanks, but the thanks of every member of this association. To the florists of Springfield for their hearty welcome and their great interest taken in the convention and to those of our members who have always been ready to render willing aid I return my sincere gratitude. To my successor in office, whoever he may be, I tender my assistance and best wishes and to one and all of you in the language of our Irving, "May you live long and prosper."

For we live for those who love us,
For those who know us true,
For the heaven's that smile above us,
And awaits our spirit too,
For the cause that needs assistance,
For the wrongs that need resistance,
For the future in the distance,
And the good that we can do.

Secretary Ammann's Report

Your secretary is pleased to report quite an increase in membership the past year; our membership at present writing is 11 life members and 155 annual members. The society has been fortunate in not having any deaths among its members the past year, at least none has come to the knowledge of your secretary. The matter of life membership should appeal more to many who are now and may become members of our organization. Every proprietor of any medium size establishment should become a life member; this is not only a benefit to the society, but is a good business proposition, at least, for every young or middle-aged man.

The trade papers have as usual been a great help to our work the past year and we all, I am sure, feel much indebted to them for their kind assistance. Much progress has been made in our experimental work which will be reported to you more fully by the secretary of our advisory board, W. N. Rudd, and Prof. H. B. Dorner, who is in charge of the work.

The secretary takes this opportunity to thank all those who responded so promptly to the call for data of glass in their respective counties. While the work is not nearly completed, the help rendered so far has encouraged me enough to say that I believe we are on the right track to get a correct line on what our business really amounts to, which when completed will be of great value to this organization. Reports from 30 counties complete and four incomplete show an aggregate of over 6,000,000 square feet under glass, with 68 counties complete and four in part to hear from. The several committees that have been appointed by our worthy president have worked faithfully and to those members also much credit is due for our progress the past year.

With the magnificent houses and service buildings merely as a foundation for the great and good work to be carried on at our experiment station, we should all this year depart from this meeting with renewed energy to work with a might for the advancement of floriculture in this great state. I wish to impress on all present that our membership is not nearly what it should be and hope that each will do his part the coming year to help increase our membership to at least a fair representation of our large interests.

Treasurer Washburn's Report

RECEIPTS.

A. C. Beal for Nat. Fl. Show	$45.00
A. C. Beal, dues, etc	82.00
Geo. A. Kuhl (balance)	8.90
J. C. Vaughan for Nat. Fl. Show	5.00
J. F. Ammann	56.00
	$196.90

DISBURSEMENTS.

Phillips Bros.	$ 3.50
A. C. Beal Sec'y expenses	5.39
Julius Roehrs & Co	50.00
Cash in bank	138.01
	$196.90

J. F. Ammann, Edwardsville, Ill.

Re-elected Secretary State Florists' Association.

Urbana Next Meeting Place.

On motion of A. C. Canfield, of Springfield, and by unanimous consent, Urbana was chosen for the next annual convention. This will give those attending the meetings an opportunity of visiting the greenhouses erected at the state university for experimental work and better appreciate the work so far accomplished by the association in this direction.

J. F. Ammann, chairman of the committee to provide for floricultural exhibits at the state fair gave his report of the work of that committee, and read a letter from Mr. O'Dwyer of the State Fair board telling of his efforts to get the board to give a suitable space for such exhibits.

E. Davenport, dean of the Illinois State University, whose arrival was delayed on account of the storm, succeeded in reaching the hall before the close of the session and gave his extempore address on "How Floricultural Interests Can Be Advanced and Why It Should Be Done at State Expense." This talk was replete with entertaining but pointed comparisons and was well received.

The Banquet.

On Tuesday evening the members of the association were the guests of the Springfield Florists' Club at a banquet at the St. Nicholas hotel. The tables were beautifully decorated by the reception committee with pink flowering azaleas and white carnations, together with vases and bontonnieres of Winsor carnations. The dinner itself was well arranged and tastefully served, with very attractive souvenir cards giving the following menu:

Blue Points
Salted Almonds
Green Sea Turtle
Celery Olives
Breast of Chicken, Supreme
Saratoga Chips
Roman Punch
Fillet of Beef, Larded, with Mushrooms
Asparagus Browned Potatoe
Lettuce and Tomato Salad
Tutti Frutti Ice Cream
Assorted Cake
Roquefort Cheese
Toasted Water Crackers
Coffee
Cigars

Then over the coffee and cigars with Chas. E. Hay, of Springfield, acting as toastmaster, the following toasts were responded to and heartily applauded:

TOASTS.

Invocation ..... Ven. F. A. DeRosset
Beacons—"On the Carnation Horizon" ..... W. N. Rudd
Current Topics
"From a Professional View Point" ..... Prof. H. B. Dorner
"Inspiration of a Flower Show" ..... George Asmus
Springfield—"Past, Present and Future" ..... N. R. Roberts
The Western Fad—"Is It a Perennial" ..... Albert T. Hey
Snowbound—"In a Friendly Community" ..... Geo. H. Angermueller
Afterglow
"Of the American Carnation Society Meeting" ..... J. F. Ammann

Wednesday Morning Session.

BY WIRE.

On Wednesday morning the association caused vases of flowers to be placed on the desks of legislators and other state officials. In acknowledging the receipt of flowers Governor Deneen sent the following letter to the convention hall:

"Gentlemen: I thank you cordially for the beautiful flowers sent to me this morning with the compliments of your association. I assure you that I appreciate very highly your courtesy in this matter. I desire to extend to you

F. L. Washburn, Bloomington, Ill.

Re-elected Treasurer State Florists' Association.

cordial greeting and my best wishes for a successful convention."

Another letter from the state capitol read as follows:

"J. F. Ammann, Secy., Dear Sir: As one of the members of the den of iniquity, otherwise known as the Illinois general assembly, I wish to express my hearty appreciation of the lovely flowers which your association has so generously showered upon us today. The legislative paths of the last six weeks have hardly been strewn with roses until this morning.—FLAGG."

Prof. J. H. Collins, superintendent of the public schools of Springfield, on Wednesday morning spoke before the association on the topic of "School Gardens." He read several reports he had collected of the results of the school garden idea, but did not confine his attention to this phase of the matter, but went on to tell of the advantages of home gardening in general. This was an excellent talk and well received. Prof. H. B. Dorner followed with an address on "Our Experiment Stations," telling of the work there being carried on somewhat in detail. W. N. Rudd then spoke of "A Few Carnations I have Seen." Votes of thanks were extended to the Springfield florists who had so generously entertained the association, also to the speakers for their papers and remarks.

The Election of Officers.

The election of officers resulted as follows:

E. G. Gullett, Lincoln, president.

G. B. Franks, Champaign, vice-president.

J. F. Ammann, Edwardsville, secretary.

F. L. Washburn, Bloomington, treasurer.

Wednesday afternoon was spent by the visiting florists in visiting various growing establishments as guests of the local trade or in visiting the historic sites of the town.

Report of the Judges.

Your judges of the exhibition respectfully report exhibits made by 16 exhibitors, as follows:

Chicago Carnation Co., Joliet.—Vase of Carnation Conquest, 86 points (certificate of merit); honorable mention for vases of Melody, White Perfection, Beacon, Winsor and Andrew Carnegie; vases of Aristocrat, White Enchantress, Sarah Hill, Splendor, Enchantress and Lawson-Enchantress.

Mount Greenwood Cemetery Association, Morgan Park.—Vase of Carnation Mt. Greenwood, salmon pink, 86 points (certificate of merit); honorable mention for vase of Mrs. J. C. Vaughan carnations; also vase of Seedling 11004 C (crimson) exhibited.

Baur & Smith, Indianapolis, Ind.—Vase of Shasta carnations (white), 89 points (certificate of merit).

St. Clair Floral Co., Belleville.—Vase of Seedling Carnation No. 20 (dark pink), 82 points.

Belle Miller, Springfield.—Honorable mention for vases for Variegated Lawson and Mrs. T. W. Lawson; vases of White Perfection, Lady Bountiful and Winsor also exhibited.

Bassett & Washburn, Chicago.—Vase of Carnation O. P. Bassett, 86 points (certificate of merit).

A. C. Brown, Springfield.—Vase of Superba (pink), 90 points (certificate of merit); Sangamo (silver pink), 87 points (certificate of merit); Clara Mae (pink), 82 points; Gov. Deneen (purple), 81 points; also vases of Rose Pink Enchantress, Mrs. Patten and 25 seedlings.

Highland Park Greenhouses, Highland Park.—Vase of Carnation Lucille (white with shell pink center), 85 points (certificate of merit).

J. F. Ammann, Edwardsville.—Honorable mention for vase of Mrs. Potter Palmer; vases of Ivory roses, Rhea Reid, Killarney, Richmond, Chatenay and Alice Roosevelt, also exhibited.

Bertermann Bros., Indianapolis, Ind.—Vase of Carnation James Whitcomb Riley (yellow), 87 points (certificate of merit).

Springfield Boiler & Mfg. Co.—Model Steel internally fired boiler and photographs.

Wirth & Graup, Springfield.—Vases of White Lawson, Enchantress, Lady Bountiful and White Enchantress.

W. H. Gullett Sons, Lincoln.—Vases of Bride and Bridesmaid roses, honorable mention.

PLANTS.

A. C. Brown, Springfield.—Group of cinerarias, azaleas and pink geraniums.

Carl Rauth, Springfield.—Group of azaleas, araucarias, palms, ferns and pans of tulips.

Vaughan's Seed Store, Chicago.—A line of flowering and decorative plants, dormant stock and bulbs.

Wertheimer Bros., New York.—General displays of novelties in ribbons, etc.

MISCELLANEOUS.

I. N. Pillsbury, Galesburg.—Vase of split carnations mended with the Pillsbury staples, which we consider a very good thing.

American Blower Co., Detroit, Mich.—Model steam trap.

Ionia Pottery Co., Ionia, Mich.—General display of white flower pots, vases, wire hanging baskets and wire designs.

Geo. M. Garland, Des Plaines, Ill.—Section of greenhouse showing new truss work, gutters, etc.

Kroeschell Bros. Co., Chicago.—Model of heating boiler.

J. C. Moninger Co., Chicago.—Section of greenhouse showing new ice clearing hinge.

Convention Notes.

The following concerns were represented by prominent banners on the wall; Peterson Nursery, Chicago; W. J. Cowee, Berlin, N. Y.; Kroeschell Bros. Co., Chicago; John C. Moninger Co., Chicago; Springfield Boiler & Mfg. Co., Pulverized Manure Co., Chicago; Foley Mfg. Co., Chicago; Chas. F. Meyer & Co., New York; Wm. Hagemann & Co., New York; Henry F. Michell Co., Philadelphia, Pa.; E. H. Hunt, Chicago; Laib Co., Louisville, Ky.; American Blower Co., Detroit, Mich., and the A. Dietsch Co., Chicago.

The photograph album of Fred Lautenschlager of the Kroeschell Bros. Co., Chicago, showing views he had taken of greenhouse establishments in which the Kroeschell boiler had been installed was one of the things most of the visitors took occasion to look over. Besides this the same firm had a small model of a boiler, a generator, heating system and rocking grates.

Geo. W. Cohen, of Wertheimer Bros., New York, was on hand with an attractive exhibit of ribbons, corsage shields, silk bouquet hankerchiefs, violet novelties and chiffons, including the latest creations in "Sparkling Dewdrop" chiffon.

The E. G. Hill Co. of Richmond, Ind., had an exhibit on the way on Tuesday which must have been delayed by the storm. A shipment of carnations from the Chas. Knopf Floral Co. suffered the same fate.

Peter Reinberg was given the compliment of 20 ballots in the legislative vote for U. S. senator on Tuesday. The first ballot was received by the representatives and senators in joint session with great applause.

The hardware men of the state were gathering on Tuesday for their annual convention and the armory in which they were staging a large exhibition was decorated by A. C. Brown.

And they always know that J. A. Evans of Richmond, Ind., is present, the after dinner speakers taking particular note to address "Mr. Chairman, Mr. Evans and Gentlemen."

There were 3,000 of the finest carnations shipped to Springfield to be used on Wednesday as reminders to the legislators assembled that the florists of the state were in town.

The Ionia Pottery Co., Ionia, Mich., in charge of Geo. Dysinger, had an attractive exhibit of pots, stands, vases and a general line of wire designs.

The carnation was king at the show, grand vases of both new and standard varieties being shown and little else in the cut flower line.

The John C. Moninger Co., Chicago, showed samples of its lock splice for gutters, purlins, ridges and new ice clearing hinge.

REPRESENTATIVES OF THE LORD & BURNHAM CO., NEW YORK.
At Dinner at the St. Denis Hotel, February 6, 1909.

Springfield Florists' Club.

The manner in which the Springfield Florists' Club entertained the convention visitors was a matter of favorable comment, as it was last year also, and the officers, committeemen and members of this organization are entitled to all the credit that can possibly be bestowed. Special credit is due to President Carl Rauth, Vice-President R. T. Donnell, Secretary W. T. Homburg, Treasurer G. Van Horn and the following special committees:

Advertising committee.—W. T. Homburg, chairman; A. C. Brown, G. W. Jack and R. T. Donnell.

Entertainment committee.—A. C. Brown, chairman; H. L. Phelps and C. E. Hay.

Hall and exhibition committee.—Geo. Van Horn, chairman; Raymond Biernbaum and Carl Rauth.

Report of Advisory Committee.

Various informal meetings of two or more members of the committee have been held during the year for the examination of building plans and discussion of matters of importance to the conducting of the work, and while these meetings were of value and assisted materially in furthering the business for which the committee was appointed, as they were not official they are not here reported.

A meeting was held on February 14, 1908, at Springfield. A general discussion of building plans occurred. Reports from A. C. Beal and various other persons on matters relative to the work at the station were received. It was decided that preliminary plans for the new greenhouses should be drawn and copies be submitted to each member of the committee for examination and criticism.

A meeting was held at Bloomington, July 1, 1908. Professor Blair reported that a total amount of $3,700 had been expended from the appropriation in carrying out authorized work. He stated that the new greenhouses which it was proposed to build as per plans examined individually by the various members of the committee would cost $13,500, of which sum the officials of the station had found themselves able to provide $7,000, leaving a balance of $6,500 necessary to be raised. The advisory committee, having previously set aside a sum of $3,000 for building purposes, then authorized the expenditure of $3,500 more, making $6,500 to be paid towards the greenhouses from the appropriation. Various reports were presented and accepted and an adjournment was had to the Washburn greenhouses, where experimental work in the control of thrips was being carried on and an examination of the conditions there existing was made. A report by H. B. Dorner outlining a series of experiments on fertilizer as applied to carnations under glass was presented and accepted.

A meeting was held at the University of Illinois at Urbana, October 12, 1908. Various routine matters were considered and Professor Blair reported that unforeseen contingencies had reduced the amount of our appropriation available for the greenhouse building to about $6,000 instead of $6,500, but that the department had found themselves able to take care of the other $500. It was unanimously agreed to ask the state legislature at the next session for an appropriation as follows:

For buildings	$18,000
For publications	4,000
For research work	13,000

This makes a total of $35,000. J. F. Ammann was unanimously selected as the representative of this committee upon the general legislative committee for experiment station appropriations. Upon the following day various members of the committee met with representatives of committees in charge of other interests similarly organized to our own and a general agreement was reached as to the framing of a bill to be introduced in the legislature and to the handling of the same by our representative in connection with those of the other interests.

Another meeting was held at the University of Illinois February 8, 1909, at which reports regarding the progress of the work were received and accepted and an inspection of the new greenhouses and the work being conducted therein was made, the committee being highly pleased at the fine conditions found and the efficiency displayed in all parts of the establishment.

In conclusion the committee wishes to make known to the association the extent of the obligations of the florists of this state to Eugene Davenport, director of the experiment station, and to J. C. Blair, chief of the Department of Horticulture. These gentlemen have shown a most enthusiastic interest in our project and have forwarded our plans in every possible way. It is well known to the members of this committee that the general funds appropriated for the experiment station are inadequate and these gentlemen are at all times hard pressed to make both ends meet; therefore their action in drawing upon their scanty resources for $7,500, more than half the total amount needed for our buildings, should be thoroughly appreciated by every member of this association and your committee believes should be testified to by a vote of thanks. The committee also wishes to signify its high commendation of the work done by H. B. Dorner. Having been in close touch with him at all times and having made frequent and careful examination we have found nothing to criticise, much to commend and believe that the station as well as this association is to be congratulated in securing his valuable services.

We wish to urge upon every member of the association the desirability of visiting the university as often as possible and of inspecting the work being done for us there. We believe that all will concede that the greenhouse plant is a model commercial plant and well worth the study of all florists as regards construction details and heating apparatus. (As Mr. Dorner will speak to you regarding the buildings, a detailed description of them does not seem needed in this report.) The committee feels sure that every florist will be made welcome by Mr. Dorner and that the educational value to each one coming from an examination of the work can hardly be overestimated.

The present plant of course is only a beginning and the more glass structures that can be provided the more value we shall get from the work; therefore it should be the duty of every member of this association to get in touch with Chairman Ammann of the legislative committee and assist in every possible legitimate way in securing the passage of the present bill. It should be noted that while we have now two 100-foot houses, if we get the appropriation asked for we shall be able at once to erect four more houses, thus giving us three times the persent capacity for doing good work for the florist.

The committee congratulates you upon the great work so well begun and feels that the achievements so far are only a small part of what may be done each year through the years to come, provided that this association and its individual members keep their shoulders firmly against the wheels and keep pushing.

Morehead Return Steam Traps.

The accompanying illustration is interesting in that it indicates in some measure the extent of the present large use of steam traps in connection with greenhouses. The illustration represents a shipment of 50 Morehead return and non-return steam traps and boiler feed from the plant of the Morehead Manufacturing Co. of Detroit, Mich. For over 20 years the Morehead trap has been in general use by florists. The operation of the trap is absolutely automatic and is dependent solely upon the natural law of gravitation. It is set perfectly level about four feet above the water level of the boiler, and as nearly directly over the opening in the boiler as possible.

As the tank becomes filled with water, it tilts, engaging with a lever which turns live steam from the dome of the boiler onto the surface of the water in the tank, thereby equalizing the pressure within the boiler. The water is allowed to flow directly into the boiler by gravity. As the tank becomes empty, it is tilted back into its normal position by a weighted arm, and the process of refilling and redumping is continued. It appeals particularly to those desiring a dependable, simple piece of mechanism for the elimination of the line condensation. Employed as a boiler feed, the

Morehead return trap requires less than one-tenth the amount of steam consumed by the ordinary boiler feed pump. A little careful thought and figuring in connection with the question of the economic relation of the steam trap to the consumption of fuel will convince any florist of the strong advisibility of utilizing the former.

To Be Done Now.

IN THE GREENHOUSES.

Continue to sow annuals for early planting outside, but only as many as can be properly taken care of until planting time.

Take out of store whatever dahlias are required for early propagation and place over a gentle heat to start.

Sow Pyrethrum roseum for flowering outside this summer and plant out fall sown seedlings as soon as the weather is fit.

Take grafted roses out of the cases before the shoots have a chance to run up spindly and keep a bright lookout for manetti suckers.

Avoid wetting the growth on forced shrubs unduly after the flowers show, especially with such subjects as magnolias, the texture of whose flowers are delicate.

Gardenias will take more water as the days lengthen and the sun gets more power.

Spray rambler roses regularly as the growths develop; thin the shoots a little if necessary and keep them clean.

OUTDOORS.

Keep off the soil when it is wet and pasty. Time will be saved rather than lost by waiting until it is in proper condition.

Take note of wet and badly drained portions of the garden or grounds for attention to drainage later.

In spare time look over all tools and utensils and do any repairs necessary; also procure any new ones needed so they will be on hand in good time.

A lot of fresh, green manure should never be used on the field quarters for carnations. Old and partially decayed manure is far better.

Get all decayed standing cabbage or similar crops dug or plowed under as early as possible, or they soon become very offensive.

If endives are keeping badly look them over, pick off decayed leaves and plant them in light, dry soil in frames where they can be protected.

OBITUARY.

John H. Small, Sr.

John H. Small, Sr., founder of the well known firm of J. H. Small & Sons of Washington, D. C., and New York, died at his home in Washington on February 14, aged 82 years. Mr. Small was born at Watford, Eng., in 1826, and came to America in 1848 intending to give his entire attention to landscape gardening, or architecture, as it is now called, for which he was well trained. While at the royal gardens at Frogmore, he had the privilege of seeing much of the early married life of Queen Victoria, as well as the early childhood of the present king. Being shown one day how to pick strawberries so that the queen could eat them from the stem, his father said to him: "You are picking berries for the queen of England. Who knows what you will be doing for the president of the United States some day." He remembers seeing the great duke of Wellington riding to and from London and Windsor.

Arriving in Philadelphia, he heard that Mr. Linthicum of "The Oaks" in Georgetown wished a landscape gardener to plan and add to the beauty of his place. He secured the position and retained it until he went into business for himself in 1854. He planned and laid out many of the fast disappearing old gardens in Georgetown. He was a pioneer in planning interior and table decora-

The Late J. H. Small.

tions as we find them today in America. Through his advice the British minister, Lord Lyons, gave up the wax flowers and fruit which he had brought from Paris for table decorations, and used

The Late William C. Krick.

natural flowers instead. Mr. Small furnished them at a loss in order to set the fashion for the natural instead of artificial decorations. As the elder Olmsted was the pioneer in American landscape architecture, now so ably followed by his son, so Mr. Small was the first in interior and table decorations in America. He was ably followed by his sons J. H. Small, Jr., and C. A. Small. Together they planned many of the beautiful decorations for which America has become famous.

Nine years ago he was stricken with paralysis and has since been practically an invalid. During these years, however, he was always cheerful and in a measure active, taking great interest in the work of the greenhouses, which are a part of the extensive family estate, on the Brentwood road. Though a thorough man of business, Mr. Small was always mindful of the rights of his competitors and frequently lent a helping hand. He was prominent in the masonic fraternity and a devout Christian. He is survived by a widow, three sons and six daughters. The sons are John H. Jr., manager of the Washington business; Chas. A., manager at New York, and Archibald, a resident of Washington. The daughters are, Mrs. Dr. Richardson, Mrs. Berry, Mrs. Dalgleish, Mrs. Crowe and the Misses Janet and Sidney Small, all of Washington.

William Christian Krick.

William C. Krick, a florist with a national reputation, died February 7 of heart failure at his home, 1165 Greene avenue, Brooklyn, N. Y. Though reared in the florist business, and for over 20 years in the retail branch at 1287 Broadway, Brooklyn, Mr. Krick was best known to the trade as the originator of immortelle letters. In May and June, 1885, he manufactured and placed on the market the first letters of this kind ever used by florists in this country. He was also the inventor of numerous other devices, now in general use in the retail trade, noteworthy being his society emblems, monograms, flower pot hangers, handles, etc. His inventions received the highest award at the Pan-American exposition Buffalo, N. Y.

Mr. Krick was born in Jamaica, L. I., in 1859. He was the son of Chas. M. and K. Krick, pioneer florists of Long Island. He succeeded to the retail business established by his parents at 1287 Broadway, Brooklyn, many years ago. This place had greenhouses attached and a prosperous retail business was conducted. During all these years the manufacture of the immortelle letters was carried on in connection and a fine trade established. About four years ago he gave up the cut flower business and removed to 1165 Greene avenue, and since that time has been engaged exclusively in the manufacture of letters and his various other inventions. He was of a genial disposition and had many friends. He was a member of Ottman lodge of free masons and the New York Florists' Club. His funeral was held from his late residence, February 10, the masonic order officiating. He is survived by a widow, Lydia Rodman, an estimable woman, who will continue the business; three sons, Charles, Frank and George, and two daughters, Mrs. Martin Sherwood of Spring Valley, N. Y., and Miss Lydia Krick. He is also survived by one brother, Geo. M. Krick, formerly a grower of Elmont, L. I., and two sisters, Mrs. J. J. Baumgart, a long time florist of Brooklyn, and Mrs. H. Grebe of Van Wyelse avenue, Jamaica, L. I.

David Bearn.

Word has been received by letter in Philadelphia, of the death of David Bearn, at his old home in Scotland to which place he returned about eight years ago, after a residence of some 20 years in that city. Mr. Bearn came to this country about 1874, his first position being with Robert Bros. Later he went into business with John Kinners at Thirty-third and Wallace streets, where they built several greenhouses. After buying Mr. Kinners' interest and continuing the business several years, he sold his ground and moved the houses to Bola where he grew flowers for a number of years. His health failing, he sold out and returned to the land of his birth. "Davy" Bearn was a rugged, honest Scot who never lost any of the accent of his mother tongue. He took great interest in the Florists' Club of Philadelphia and the Pennsylvania Horticultural Society and was generally on one of the important committees of each of these bodies. K.

ALTHOUGH opinions have been freely expressed to the contrary, latest official reports show that, at a low estimate, there is a sufficient supply of nitrate of soda in Chili to satisfy the entire world's consumption for 130 years.

FEBRUARY may be a short month but it is emptying the coal bins all right.

FORMOSA LILIES should be grown with a night temperature of not more than 50°.

WHERE a rich red bedding rose is needed Gruss an Teplitz may be chosen with confidence.

PLANTSMEN are giving close attention to their lilies now. The article signed "Grower" elsewhere in this issue will be found seasonable and practical.

FLOWERS of the wild arbutus were offered in Reading, Pa., during the week, having been gathered, according to the local press, in a sheltered, disused quarry.

GROWERS should take note of the coming show of the Boston Co-operative Flower Growers' Association which, as advertised in our pages, will be held February 27-28, at Horticultural Hall, Boston. This is a free show and will form a splendid opportunity for trade growers to exhibit anything they have to sell. All information can be obtained from Secretary Pierce, Waltham, Mass.

Society of American Florists.

PRIZES FOR TRAVELING MEN.

The following offer is made by President Valentine:

"For the purpose of enlisting the traveling men in securing new members of the Society of American Florists, I hereby offer a first prize of $50 and a second prize of $25 to the traveling man securing the two largest numbers of new members to the Society of American Florists between now and August 10, 1909.

"The conditions of the contest shall be that the winner shall be a traveling representative of some concern dealing in horticultural products or supplies, and he shall forward to the secretary as soon as received the money received for new memberships. No member shall be accounted a new one whose name appears in the published report for last year.

"Before any man can win either of these prizes the membership fees sent to the secretary by him, under this contest, must have been double the amount of the prize claimed. For the purpose of determining whether new memberships have been secured before August 10, the secretary shall include all memberships mailed to him bearing a post mark not later than August 10.

"Should any difference of opinion arise regarding the award under this offer, the matter shall be decided by the members of the executive committee present at the next annual convention of the society in Cincinnati, and their decision shall be final."

The writer will be glad to forward a supply of application blanks and addressed envelopes to any traveling man wishing to enter this competition.

W. N. RUDD, Sec'y.

February 12, 1909.

When Flowers Are a Glut.

ED. AMERICAN FLORIST:—

A question came into the question box at the last meeting of the St. Louis Florists' Club as to which would be better for the interests of the trade, whether the surplus, when flowers were a glut, should be turned over to the hospitals or be sold at ruinous prices. We must agree that flowers are a luxury and not a necessity, and therefore cannot be classed with fruits and foods of a perishable nature. It appears to me that when there is a glut of flowers on the market it would be much better if the surplus be donated by the commission man to the hospitals rather than sell them at prices which do not pay the grower and injure the retailer when he is endeavoring to hold up his end. An example of this was shown recently: Violets were sold at $2 per 1,000, a price which does not pay the growers to pick, bunch them and bring them to town. Now a good bunch of 25 violets can always be sold for 25 cents, and if the wholesale price would be $4-$5 per 1,000 a living profit can be made by the storekeeper who must put at times in fancy boxes and deliver. For example: A grower brings into the commission house 10,000 violets. If only 5,000 were sold at $4 he would still receive $20, as he would had they been all sold at $2. The past week saw violets jump from $2 to $6, and the general public wanted violets at 10 cents, whereas had the price been kept uniform it would have given more satisfaction.

An objection might be made to the wholesaler turning this surplus over to the hospital, but surely it could not be right for the retailer, as it might be urged that the retailer who was given a box of flowers to be given to the hospitals might use these as an advertisement for himself, and if certain wholesalers showed favoritism in furnishing these retailers then it might create jealousies between the retailers and get the wholesaler into no end of trouble. Then the wholesaler, of course, with the permission of his grower, would donate these flowers himself to the hospitals; he would use judgment; if he received good fresh flowers he would not be supposed to turn them over that day, but to hold them in his ice boxes in case of an unexpected demand. Now carnations of good quality if sold from October 1 till July 1 at not less than $2 per 100 could always be retailed at 50 cents per dozen or higher according to the supply. In the summer months not less than $1 per 100 and these could be retailed at 25 cents per dozen.

This would put an end to the fakir signs which at times adorn the windows of our so-called legitimate florists such as 10 and 15 cents per dozen, and thus reduce the level of a bunch of flowers to a bunch of soup greens. As these gluts are periodical, I believe this system would work; the grower would be better off and the retailer would keep his end up, insuring a fair and living profit for all, while the giving of these flowers would be as a gift from God to enliven up some of the poor creatures whose sufferings would be softened a little by beautiful surroundings.

W. F.

[Our correspondent puts his side of the case well, but we think there is another side. We shall be glad to hear from either growers, retailers or commission men on this matter, which is worthy of discussion.—ED.]

Meetings Next Week.

Baltimore, Md., February 22, 8 p. m.—Gardeners' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Boston, Mass., February 27, 11 a. m.—Massachusetts Horticultural Society, Horticultural Hall, 300 Massachusetts avenue. Address on "Rural New England," by Mrs. Charlotte R. F. Ladd, Sturbridge, Mass.

Boston, Mass., February 27-28.—Boston Co-operative Flower Growers' Association, commercial flower show.

Cleveland, O., February 22, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit street.

Hartford, Conn., February 25, 8 p. m.—The Connecticut Horticultural Society, County building.

Lake Forest, Ill., February 24, 8 p. m.—The Horticultural Society of Lake Forest, Council Chamber, City hall.

Worcester, Mass., February 25.—Worcester County Horticultural Society, Horticultural Hall. Ladies' day.

The Japanese Air Plant.

A BUTTE, MONT., OPINION.

"Up at my house," said the man with the derby hat, "we have a plant called an oxygen plant. It is as green and fresh as can be, but it never has to have any water or anything. It just hangs in the air on a string and grows."

"So you fell for that yourself, did you? I'm glad to hear it," commented the man with the checked suit; "I surely am, for I've been keeping my little mouth shut for some weeks after a discovery I made."

"What discovery?" asked the man with a derby hat.

"The discovery that the oxygen plant is nothing at all but dyed moss and that it is an arrant fake, a bogus novelty, a hollow sham and a rich joke on all who bought it.

"The woman who peddled those things reaped a very nice harvest at 50 cents per harve, and she sure was there with the novelty talk. Oh, yes; it got us. Think of it, a handsome plant that never had to be watched or watered and that just hung in the air and grew. A plant in fact, that had so little use for water you were warned not to let water touch it.

"It was this fact, after the spell of the woman's talk had worn away, that made me suspicious, so I broke off a little piece of the plant and put it in a glass of water. In a few minutes the water was green and the branch of the oxygen plant assumed the appearance of old and faded moss such as you can pluck off the stones or stumps on any moist hillside.

"Yes it was an oxygen plant all right, but the woman who furnished the oxygen had gone her way. Now, when you go home tonight just break a twig off that wonderful plant of yours and see what a delicate and beautiful green you can turn the water. Beautiful, novel things, those plants. Somewhat on the idea of green carnations."—Butte Evening News.

Marguerite Carnations.

ED. AMERICAN FLORIST:—

Will you give me brief cultural directions on Marguerite carnations? I am sowing the seeds now in flats and intend to sell the plants for bedding out. Would it be a paying proposition to grow them along with other carnations, in the same house for winter bloom.

J. W. S.

These carnations are usually treated as annuals such as asters, stocks, etc., and thrown away after flowering. Their culture is simple and consists of sowing the seed in a greenhouse temperature growing the plants in a cool, airy house or frame and planting out at the end of May where they are to bloom. Although they flower fairly well under glass in winter, the flowers cannot compare with the usual market varieties and we should hesitate to grow them in any quantity.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—Practical gardener, married, good references, wishes position for next spring. Address
Key 781, care American Florist.

Situation Wanted—By a single man 32 years old; 15 years' experience; private or commercial place; state wages
Key 778, care American Florist.

Situation Wanted—As assistant gardener in private estate by Swiss; 27 years of age, two years in this country; has general experience.
Key 789 care American Florist.

Situation Wanted—In rose or carnation section by young single man, age 29, with several years' experince in both sections. Address
Key 779, care American Florist.

Situation Wanted—As gardener on private place or institution; life experience from Holland and this country; married, age 30, sober and industrious; best of references.
Key 784, care American Florist.

Situation Wanted—As gardener; have had 13 years' experience in the large gardens of Germany Russia, Belgium, Asia, Holland and Turkey and can give references. Address
Key 782, care American Florist.

Situation Wanted—A young all-'round general greenhouse man, with 8 years' experience wishes a position near Chigago; ready for engagement on the 5th of March; state wages in first letter.
Key 785, care American Florist.

Situation Wanted—As foreman; good grower of roses carnations, 'mums nursery stock, etc.; long experience on first-class wholesale and retail places; good wages, yearly contract, hustler, no drinker, references. HORTICULTURIST,
180 Grand St., Jersey City N. J.

Situation Wanted—As gardener by a thoroughly practical and competent man, expert in all branches of business, private and commercial, can handle any size place; A 1 roses, carnations, ferns, orchids; Pacific coast job wanted. Address
H. BREEN, Burlingame, Calif.

Help Wanted—A gardener for out door work, single, sober and a good worker. Address
Key 786, care American Florist.

Help Wanted—Reliable man, good grower of roses, carnations and bedding plants; give references in first letter and state wages wanted.
F. WALKER & CO., Louisville Ky.

Help Wanted—First-class market gardener; one accustomed to growing vegetables in greenhouses and hotbeds. None but first-class man need apply. Address, with references,
Key 747, care American Florist.

Help Wanted—Young man of good character and good appearance who is an expert decorator and designer as well as good salesman in an up to date floral establishment; no other need apply.
Key 783, care American Florist.

Help Wanted—Energetio man as working foreman for landscape work; must be experienced in hardy plants, grading, pruning, etc., and capable of handling men to best advantage; state references and salary required. Address
Key 788, care American Florist.

Help Wanted—A gardener to take care of lawn conservatory, small greenhouse, garden, cow and chickens and do general outside work; good references required; married man; permanent place, good wages and apartment. Inquire
MRS. J. A. MCGILL,
4938 Drexel Boul., Chigago.

Help Wanted—First-class market gardener, one accustomed to growing vegetables in greenhouses and hotbeds, with some knowledge of carnations and bedding stock, and able to take full charge of 25,000 feet of glass; married man preferred; none but strictly sober person need apply; references. Key 753, care American Florist.

Wanted to Lease—With privelege of buying, small range of greenhouses in good repair; Indiana or Ohio. Address
Key 787, care American Florist.

Wanted—To lease and buy later, greenhouses with land; retail location; state size of houses; size of glass; full particulars. Address
BUSINESS, 180 Grand St., Jersey City, N. J.

For Sale—Some good 3 inch pipe guaranteed sound, 6c foot; several small boilers cheap.
W. H. SALTER, Rochester, N. Y.

For Sale—Or party to work greenhouses on shares; fine location in a Kansas town; good demand and growing; best of reasons given
Key 780, care American Florist.

For Sale—5000 feet of glass; no competition; can sell more than you can grow at highest price; write for particulars.
DWIGHT GREENHOUSES, Dwight, Ill.

For Sale—An old established, first-class retail store with palm houses attached, in Chicago, south side; reason for selling, other business.
Key 659, care American Florist.

TO LEASE.

Established florists' business in a thriving southern city; 60,000 ft. of glass sale for everything you can grow, house well stocked with roses, carnations, lilaes, orchids, ferns, palms, etc., which will be sold at a reasonable figure; large plot now under cultivation suitable for truck gardening, also six-room dwelling adjoining same; best of reasons for wishing to lease at a low price. Address
Key 773, care American Florist.

For Sale.

One second hand Hot Water boiler capable of heating 3,500 ft. 4-in. pipe.

Superior Machine & Boiler Works,
125-133 W. Superior St., CHICAGO, ILL.

WANTED

Position as head gardener or superintendent, by thoroughly practical, active, energetic man; up to date in growing plants, flowers and vegetables under glass; ornamental planting care of trees, shrubs and hardy plants, and the developement and improvement of public and private grounds; Scotchman, 48 years of age, married, no children; please state salary and other particulars in first letter. Address **A. B., care American Florist,**
1133 Broadway, New York.

For Sale.

For immediate delivery one No. 6, No. 7, No. 8 Superior Internal Boiler.

Superior Machine & Boiler Works,
125-133 W. Superior St. CHICAGO, ILL.

I Desire to Ask You a Favor,

Whether among your acquaintances you know a young man of very good family desiring to perfect himself in the French language and to study the culture of roses and nursery stock as we grow them around Paris. This young man would be given a room in our home, his washing, and receive $1.00 per day. He would not be subject to hard labor, but on the contrary would learn planting, grafting, pruning—in a word, everything that concerns labor in a nursery. In case you know such a person, kihdly put us in communication with him.

PIERRE COCHET, Suisnes, France.

FOR SALE.

Established wholesale and retail florist business, consisting of 25,000 feet of glass. This is one of the best places in central New York; everything being nearly new and in first-class condition. Has two boilers either one capable of heating the entire plant. The stock consists of a general line of plants and cut flowers, and is well equipped in every way. Here is your opportunity for a paying business. Come and look the place over and the plant and the books will prove all that I say Would also consider a proposition to rent.

E. J. BYAM, 408-16 Elm St, Rome, N. Y.

Advertisements should be mailed so as to reach us not later than Tuesday of the week in which they are intended to appear.

Detroit.

St. Valentine's day brought an impetus to the retail trade that was most welcome and refreshing. Contrasted with the dullness prevailing the past weeks, it was a most hopeful and promising indication of the slowly returning revival of the "good old days" in retail circles. Each recurring year, this happy day of the exchange of missives of good will and joy is becoming more and more important to the florists and particularly to those who make the most of the occasion by ample preparations to attract the attention of those seeking appropriate tokens expressive of the thoughts of the day, and the use of a little judicious advertising aids materially in developing a fast increasing trade just before the advent of the Lenten season. This year violets were in great demand and the supply unequal to it. Many carnations were sold and great quantities of bulbous flowers. In the latter, pot plants were most popular and a good trade was done in them. Azaleas supplied the call for a more expensive plant and many choice specimens tastefully trimmed carried joy to the recipients. A feature of the whims of the public was observed in the limited call for roses on this occasion; no shortage in the supply of this item of stock is reported and purchases were light. Owing chiefly to the continued shortage of carnations this winter bulbous stock has not, up to the present time, been so unwelcome as formerly, but nevertheless growers are cautiously placing their orders for bulb stock for the next season, the aggregate of which will fall far short of that of previous years. Roman hyacinths and Paper White narcissi are being eliminated entirely by some growers much to the pleasure of the carnation growers who feel that the product of Holland and France has encroached upon their product too much.

A fair sized blizzard greeted those who turned out to the Florists' Club meeting and carnation exhibition Monday evening, February 15, but the storm deterred but a few of the most timid and the result was a well attended and enthusiastic meeting. W. W. Gammage, London, Ont., was the star of the programme. He addressed the members on "Carnations." He related his experience with 28,000 plants grown last year, of which he carefully kept complete records of the cost and production of each variety, and the results were freely told in a most interesting manner. Some of his statements concerning different varieties of carnations were surprising revelations to many of the growers present. He also related his experience with different styles of greenhouses and was the target for many who asked questions concerning the same. A rousing vote of thanks was given the visiting essayist.

A. Miller, of Vaughan's Seed Store, and a former student of the Michigan Agricultural College, who was present, spoke most interestingly of the work of that institution and chided the florists for not learning from institutions of that kind the solution of the vexing problems often met with in greenhouse and field work.

Elmer D. Smith was also a visitor and promised to address the club on chrysanthemums at the meeting of April 26 next. The exhibition of carnations consisted chiefly of local grown standard varieties. There was no schedule of prizes offered but a committee of judges was appointed to pass upon the respective merits of the stock shown. The judges were W. W. Gammage, Geo. Browne and M. Bloy. The Chas. Knopf Floral Co., Richmond, Ind., showed Mrs. Chas. Knopf, an excellent flower several shades darker than Enchantress, good stem and an improvement.

Highland Park Greenhouses, Highland Park, Ill., showed Ruby, a crimson, large full flower, full calyx, and Lucille, a variegated variety, large fancy flower, similar to Prosperity, strong stems—looks like a winner. A Von Boeselager, Mt. Clemens, showed his new seedling, Clara, a deep crimson, large stiff stems, which scored 89 points and was regarded as very promising. A. Pochelon exhibited White Killarney rose coming from Pennock-Meehan Co. designated by the judges a decided acquisition.

J. F. S.

Pittsburg.

A GENERAL CLEAN UP.

St. Valentine's day was probably the best the trade has experienced in this city; there was a geenral clean up of everything at good prices, but, of course, violets were the leaders. Certainly we never saw so many at one time and by Saturday afternoon none could be bought in the city. Richmond and Killarney roses came next. These were very scarce to start with. Lilies, tulips, Paper White narcissi, Roman hyacinths and daffodils are all now plentiful. Roses are exceptionally scarce. A scarcity of lily of the valley, gardenias and orchids is also reported.

NOTES.

A. W. Smith probably sold more violets for St. Valentine's day than were ever disposed of in one day in any retail store. His run on dollar boxes kept several men busy on these for over 24 hours.

The Pittsburg Florists' Exchange was fortunate in having a nice supply of American Beauty roses.

For St. Valentine's day, The McCallum Co. had a nice supply of white violets.

Geo. A. McWilliams, Natrona, has again been selected for the grand jury.

Marion Morgan has left the employ of F. H. Westhoff, De Haven.

The Pittsburg Cut Flower Co. moved an immense quantity of violets.

Elmer Jolliff, of J. B. Murdoch & Co., is visiting western growers.

J.

COHOES, N. J.—F. Fennell has opened a new store at 187 Remsen street.

ERIE, PA.—The partnership heretofore existing between Chas. G. Offerle and Arthur G. Schaal, under the firm name of Offerle & Schaal, was dissolved on February 8, 1909, by mutual consent. All debts owing to said partnership are receivable by said Chas. G. Offerle, to whom also all claims and demands against the same are to be presented for payment. The business will be continued by Chas. C. Offerle.

TRADE GOOD, STOCK SCARCE.

Trade held up exceptionally well all last week, the two holidays of Lincoln's birthday and St. Valentine's day both contributing to create a good call for stock. St. Valentine's day is each year becoming more of a day for the flower trade, and has been contrasted with Thanksgiving day in this regard which in the past year or two proves little more than "a good Saturday." Lincoln's birthday took numbers of American Beauty and miscellaneous roses and red carnations. Of course, violets were the chief factor for valentines. But other flowers were also in good demand. The stormy weather of the past two weeks has made roses scarce, and carnations poorer with those of good shipping qualities largely lacking. As a consequence there were large lots of split and inferior carnations seen, but orders were not infrequently only partially filled, especially where red were called for. American Beauty roses are very scarce with little to be said for their quality. Richmond and Killarney roses were in very good demand, but were hard to get at any reasonable prices. Bride and Bridesmaid roses are far from being seen in quantity but quality was good. Violets continued in heavy supply and even with the large call for stock with which to fill valentine boxes, prices remain low. Bulb stock was in good supply, but the call for other flowers helped this feature also, so that the market was fairly well cleaned up. Paper White narcissus is now practically done for.

NOTES.

H. R. Hughes of 690 W. Van Buren street put up a most pleasing and original window for Lincoln's centennary, the split rail fence and log cabin idea being finely carried out. In addition, Mr. Hughes had such side "properties" as a spinning wheel, musket and other things of a by-gone but not forgotten age typical of the great emancipator. A fine painting of Lincoln was also included and a well written card headed Abraham Lincoln with a picture of a portion of his window on the reverse side was mailed as usual to his customers. Mr. Hughes looks upon these cards and the manifold attractions of his windows as his best business "drummers."

Sam Pearce has his stock of bulbous flowers in prime condition, his Yellow Prince tulips being exceptionally fine flowers. In La Reine tulips some of the finest pink shades were produced that we have yet seen. Dutch hyacinths also were fine, the dwarf plants for cutting attracting particular attention. A leading feature of this place is the lily section, fine, healthy, stock (mostly Giganteum), being brought along and giving promise of excellent results for Easter.

The home of Wm. Kidwell, near the corner of Forty-third street and Ellis avenue, was destroyed by fire at 2 a. m. Sunday morning, during the very worst of the storm that was then blowing off the lake. He and his family had barely time to escape. Mr. Ruble, of the Fleischman Floral Co., who lives just opposite, played the role of the good Samaritan, providing both clothes and shelter for the rest of the night.

21 Wabash Avenue, CHICAGO.

A bill was introduced in the house of representatives at Springfield by F. E. Ericksen to build a public auditorium on the lake front, to be used for industrial exhibitions and public gatherings, on a site furnished by the South Park commissioners. If this goes through it is to be hoped that suitable quarters will be provided for the Horticultural Society's meetings.

A fire in the conservatory and store of Edward Mendonza, 4254 Grand boulevard, early in the morning of February 11, destroyed property to the value of $500. The fire is said to have been caused by an overheated furnace.

Jens Jensen, superintendent of the west side parks, has resigned that position and now holds that of consulting engineer at about one-third his former salary.

T. E. Waters, who has been on the road for the A. L. Randall Co., is in town again. This house reports having cleaned up well on Valentine's day supplies.

The Aug. Dressel estate has been finally closed, the creditors receiving 100 per cent and 16 per cent interest, and the bankrupt and wife receiving about $1,900.

Leonard Kill, of Peter Reinberg's, says his house shipped American Beauty and Richmond roses last week to both Boston and Philadelphia.

The Rock Island railway people have started a flower shop in the La Salle street station, every appointment being of the finest.

Harry Rowe reports an exceptionally heavy business for St. Valentine's day.

Chicago Notes.

CONTINUED FROM PAGE 180.

Miss Martha Gunterburg, of the Flower Growers' Market, says Valentine's day this year was like "a little Christmas."

Chas. Penshorn, an old time florist, is disposed to retire and will offer his well established business and land for sale.

Andrew McAdams is spending the winter on the Indian river in Florida and is not expected home before Easter.

Bassett & Washburn report an average sale of over 1,000 O. P. Bassett carnations a day for last week.

The committee for the good of the club is planning a card party for the Florists' Club next month.

C. W. McKellar is now getting orange blossoms which he says can be supplied on two days' notice.

Zech & Mann are now receiving some exceptionally fine Bride and Bridesmaid roses.

St. Louis.

PRICES BETTER.

The week just ended showed up better and prices stiffened; carnations took a brace and on Saturday $4 per 100 was obtained for good stock. Violets also stiffened, $3.50 to $4 per 1,000 being asked last Wednesday, and on Saturday, $6, and all were cleaned up as St. Valentine's day had the call. Southern jonquils are in and influence the home grown product a little. The weather has been very unsettled.

CLUB MEETING.

One of the most enthusiastic meetings of the year was that of the Florists' Club last Thursday afternoon. The meeting was attended by about 40 members and many strangers. The carnation show was the feature and Will Young was in the chair. A resolution was passed to get together a committee to secure a bowling and shooting team to represent this city next August at Cincinnati. Adolph Brix brought forward a motion to suppress, if possible, the doings of certain crepe pullers who go around soliciting orders and presenting as evidence of their standing the names of prominent florists. Quite a discussion followed and President Young appointed Messrs. Windt, Schoenle and Briggs as a committee to thoroughly sift the matter. There was an animated discussion over a communication in the question box as to whether it would not be more advisable, during a glut of flowers, to dispose of the surplus by donating them to the hospitals rather than selling them at ruinous prices.

Judges of awards were Messrs. Lombard, Denker and Pier Snyder. After the meeting the carnations were handed over to Will Smith of the Smith Wholesale Floral Co. who appointed Henry Ostertag as auctioneer and the flowers were auctioned off at top prices for the benefit of the club. The members and visitors were then escorted in a body to the Bismark cafe where an elegant spread was set. After refreshments were disposed of speeches and jokes were in order. J. J. Beneke was the toastmaster. Speeches were made by J. J. Beneke, Will Young, Fred Ammann, E. W. Guy, J. J. Karins, Philadelphia, Frank Weber, Henry Ostertag, Geo. Angermueller, W. Smith, C. W. Wors, Frank Fillmore and his father, and Walter Retzer. It was announced that at the next meeting there would be a rose show and that a flower show on a grand scale would be given next fall.

AWARDS.

Red Beacon.—Pilcher, first; J. Steidle, second.

Light Pink.—J. Steidle, first, with Rose Pink Enchantress.

Variegated.—J. Steidle, first, with Patten.

Mixed vase.—Fred Ammann, first.

Dark Red.—John Steidle, first, with Harlowarden.

The following seedlings, all over 80 points, were awarded certificates of merit:

Lucille, shown by A. F. Longren, Highland Park, Ill., 89.

Mrs. Charles Knopf, shown by the Charles Knopf Floral Co., Richmond, Ind., 90.

Ruby, shown by Knopf Floral Co., 89.

Sagamo, shown by A. C. Brown, Springfield, Ill., 88.

Superba, shown by A. C. Brown, 87.

NOTES.

Several thousands of California violets were disposed of by the wholesale houses Saturday and Sunday for St. Valentine's day. There was also a good demand for red carnations.

Ostertag Bros. had the decorations at the Cinderella ball at the Coliseum and disposed of many carnations.

Young & Sons had the decorations at the second annual ball of the Imperial club.

Visitors: I. Rosnosky and Martin Reukauf, Philadelphia; A. C. Brown, Springfield, Ill.; E. W. Guy, Belleville, Ill.; Johann, Collinsville, Ill.; Fred Ammann, Edwardsville, Ill.; E. Denker, St. Charles; J. J. Karins, Philadelphia.

W. F.

Cincinnati.

TRADE IMPROVING.

There was a marked improvement in business the past week and St. Valentine's day helped to clean up all the available stock. Prices were a shade better than last week and about the only shortage of stock was on roses. However, we read the trade reports from other cities offering the same complaint, therefore, we have to make the best of it. Other flowers are equal to the demand and green goods of all kinds are active and in full supply.

The meeting of the Florists' Society held in the salesroom of Weiland & Olinger Saturday night, was well attended and great interest shown in the proceedings. Wm. Niehaus and R. C. Witterstaetter were elected to membership. Dan. Carmichael of the souvenir committee reported progress, and E. G. Gillette for the hall committee said that the deal for Horticultural Hall and the Odeon were practically closed up with the exception of the insurance which is a little excessive and the committee is working to have this reduced. The secretary was instructed to notify all the members of the society that some time in March, the executive committee of the Society of American Florists will meet in our city and the society will tender it a banquet at the Sinton hotel. Covers will be laid for all who wish to attend and plates will cost $5 each. Kindly notify E. A. Forter, 232 W. Fourth street, if you desire to be among those present and he will place your name on the list. After the meeting there was a Dutch lunch and cigars and all the members are requested to meet at the clubrooms in the Jabez Elliott Flower Market Saturday, March 13, 1909, at 8 p. m. Don't forget time and date.

We hear with much regret that our friend Wm. Speck of Newport, was stricken with paralysis the past week. At the meeting Saturday, D. Ruscoui reported that he called upon the patient during the day and that he was progressing nicely, which report was very gratifying, as none of the craft about this city has more friends than Billy Speck.

Geo. Tromey of Tromey's Flower Shop has been very busy with funeral work lately. At present he is also remodeling his store, putting mirrors and brackets all along the sides. When completed this will be one of the neatest stores in this city. George is certainly a hustler.

Wholesale Growers and Shippers of Cut Flowers.

Carnation Georgia $12.00 per 100 $100.00 per 1000

Greenhouses, NEW CASTLE, IND.

Tom Windram returned from Florida on Friday night, where he has been for the past six weeks inspecting his asparagus farm and incidently doing a little hunting and fishing. His son Charley was with him and said he had a bully time chasing the black snakes.

Peter Weiland came down from New Castle Saturday night and was present at the florists' meeting. Peter says his roses are a little off crop at present but he will have a good crop for Easter.

It is said that Arthur Becker, of the Avondale Floral Co., is very much in love and will do something rash in the near future. S.

Louisville.

TRADE SATISFACTORY.

Business conditions the past week were good, owing greatly to St. Valentine's day. Roses were in fair supply and of good quality. The demand was very good. Carnations of good quality sold very satisfactorily and were in fair supply. Sweet peas, violets, lily of the valley, etc., had a good demand, were of good quality and in fair supply. Bulbous stock can be had in great quantities of good quality and sells well. Smilax is plentiful. Other greens are a little scarce. Other stock and flowering plants can be had in great quantities of good quality and find a satisfactory demand.

For a St. Valentine's day window, Mrs. W. D. Reimers had a large red satin heart pierced with white satin arrow and quills. The heart was decorated with small crystal vases filled with large single violets and forget-me-nots, the vases concealed with handsome ribbon. In the center of the window a beautiful old gold basket was filled with choice violets and lily of the valley, also heart shaped baskets with forget-me-nots, lily of the valley and violets. The demand for violets and small flowers was very good. During the president's short stop in this city Mrs. Reimers sent Mrs. Roosevelt and Miss Ethel Roosevelt handsome boxes of flowers. F. L. S.

STOCK MORE PLENTIFUL.

There has been an increase in the quantity of nearly all stocks arriving during the past week and as a consequence, prices in general have fallen. The exceptions were special American Beauty and the best grades of other roses, which were not in great supply. Special American Beauty hung around $1 each, and large orders were hard to fill. Narcissi, tulips and sweet peas were much more plentiful, also carnations, and the prices in these commodities fell off, the most pronounced drop being in bulbous stocks. Orchids and violets showed but little change, but prices on violets stiffened up on Saturday. This was probably due to St. Valentine's day orders and good "violet weather," meaning fair and mild, when violets can be worn. The centennial of Lincoln's birthday was generally celebrated and various events in this connection, helped to round out the week's business. There is a plentiful supply of short American Beauty roses, grading No. 2 and 3, but there is no extraordinary demand for them. There is a fine showing of flowering shrubbery to be seen in the retail stores. Small weeping willows are now being forced to show the buds or "pussys," and decorated with ribbons they form novel and attractive features in show windows. Very fine flowering plants of camellia rhododendron and azalea may be seen, and primroses are numerous. Lilac is coming in freely and is being used with fine effect by the designers and decorators.

February 15.—The only change in the condition of the market is a tendency toward lower prices. Though it is claimed that a few special American Beauty roses sell for $1 each, more are going for 75 cents. Tea roses, carnations, sweet peas and bulbous stocks are more plentiful. The weather is mild, which indicates an increased supply during this week. Though St. Valentine's day business was fair, it was not extraordinary. No special efforts were made by the designers in offerings for that day. A few pierced hearts were seen, but they were exceptions. Orchids and red roses sold well.

THE CLUB DINNER.

The dinner committee of the Florists' Club is much gratified with the results of its efforts thus far and announces that already, one half of the seats are sold. As previously announced, the dinner will be held in Shanley's, Forty-second street and Broadway, on the night of February 27.

The president's reception in the large room, immediately below the Roman banquet hall, at 6 to 7, promises to be an hour of general interest. President Hallock desires to meet every member of the club, and his wife (or sweetheart), at this reception. The reception committee which will assist Mr. Hallock is composed of Ex-Presidents Walter Sheridan, Frank H. Traendly, P. O'Mara, C. H. Totty, John Scott and Chas. B. Weathered. Remember the reception begins at 6 p. m. and the dinner will be served promptly at 7. The decoration committee appointed by President Hallock includes: Alex. McConnell, J. B. Nugent, Jr., Harry Hoffmeyer, C. Koenig, Julius Roehrs, Jr., Alfred Zeller, Anton Schultheis, Jr. Van Vleet's celebrated orchestra will furnish music.

NOTES.

J. Benson Stafford who has been employed by Geo. M. Stumpp for the past two years, announces the opening of a flower shop in Buffalo, his former home. The interior decorations of the store will be executed after the Roman style, useing the pergola effect. Mr. Stafford's store will be of the highest order, and he will cater to the most exclusive trade, which he will be in a position to serve by Easter. In his experience with Geo. M. Stumpp of this city and W. J. Palmer of Buffalo, Mr. Stafford has shown marked originality and has proven himself to be an artist of the highest order. His hosts of friends both here and in Buffalo predict a successful future for him.

Samuel A. Woodrow, 53 West Thirtieth street, has filed a petition in bankruptcy with liabilities of $5,031 and assets of $656, consisting of horse and wagon, $200 accounts, $151 claims, $251 gas deposit and rebate, $19 and life insurance, cash value $35. Among the creditors are J. B. Ezechel, Mr. Woodrow's bookkeeper, $1,098, Wm. Starke, $400 and Lehnig & Winnifeld, Hackensack, N. J., $450. Mr. Woodrow started in business in April, 1907.

John Weir, the well known Brooklyn retailer, is ill and was unable to attend the buying in Twenty-eighth street, February 15. It is said that this is the first business day that Mr. Weir has missed for over 25 years. It is not believed that his illnes is serious and all who know him hope that it is not.

Abram Jacobs, a young man well known in the cut flower district, has bought the retail business of Chas. A. O'Reilly, 198 Columbus avenue, and will continue in the retail line. It is understood that Mr. O'Reilly will go into the real estate business.

The old Spanish prison confidence game was tried on Wm. Gunther, who was offered the golden opportunity of obtaining $160,000, but Mr. Gunther failed to bite.

The new bowling team of the Florists' Club will hold its first gathering on Monday evening as outlined in "Our Pastimes" page.

Buffalo.

TRADE GOOD.

Trade the past week has been very good, with very changeable weather. The Lincoln ceremonies were not very beneficial, although several retailers had very pretty windows, but what was lacking for Lincoln's day was offset by trade on St. Valentine's day. It is safe to say that the florists were never more busy than on Saturday and Sunday, unless it was at Christmas or Easter. St. Valentine's day, coming as it did on Sunday, and a judicious use of printer's ink, called the attention of the engaged young man, the willing to be and all others that there was nothing more appropriate or choice than a bunch of violets, lily of the valley or spring flowers to gladden the hearts of the fair ones. Tulips and daffodils are plentiful now.

NOTES.

The election of officers of the Florists' Club promises to be spirited, as there are two or three candidates for each office.

W. C. Buachi of Pine Ridge is very prominent in the Red Men and is a member of the grand lodge.

Since the dropping of the lid at Pine Ridge Captain Forbach has had some funeral work.

S. A. Anderson is getting a fine lot of azaleas from his Elmwood avenue greenhouses.

L. H. Neubeck is serving the county on the jury for the next two weeks.

BISON.

Washington.

GOOD VALENTINE TRADE.

St. Valentine's day was almost like another Christmas, considering the amount of flowers that were disposed of. Every retailer in the city worked hard until late in the night getting up the orders for the following day. Violets, in bunches, and made up in heart shaped hampers sold well. All other flowers, and a good many plants were disposed of easily; there was an unusual demand for orchids, and the only flowers that were scarce were American Beauty roses and few would make promises to fill orders for them. Nearly all of the stores had some special valentine design, of the heart and arrow style in their windows and one showed a unique Lincoln window, in memory of Lincoln's birthday. The feature of this window was a fence made of rails, a fair sized log, and an old ax; in the background was set in a rustic frame the portrait of Lincoln.

NOTES.

The Gude Bros. Co. is exhibiting some pretty arrangements of white lilac, azaleas, and bulbous stock in the F street store window. This firm is also cutting excellent Killarney, My Maryland and other standard roses.

Geo. C. Shaffer used a good number of azaleas, lilacs and Adiantum Farleyense for the decorations, at the Argentine legation. The centerpieces were made pyramid shape, and consisted of Killarney roses and white lilac.

Geo. Comly of Georgetown reports excellent progress at his Wisconsin avenue store. He disposed of his market stand, because he could not devote his time to both places.

Alex Garden, is cutting some excellent tulips, lilacs and carnations.

G. S.

Orange, N. J.

The president's reception and annual smoker of the New Jersey Floricultural Society was held on Friday, February 12. The evening was devoted to social intercourse. An oration upon the life and services of Charles Darwin was made by the Rev. Lewis H. Lightipe. Addresses by Charles H. Totty, Frederick and Charles Atkins, of Bobbink and Atkins, Rutherford, Edward Regan, secretary of the Morris County Gardeners, Chas. MacTaggert of Thorburn's Seed Store and W. E. Maynard, of the Gardener's Chronicle. The Rickards Bros. gave their character songs and Andrew Wilson of the Plant Oil Co., of Chatham, danced and told funny stories, and C. B. Lust gave selections upon the banjo. The imperial quartet rendered a musical programme.

The usual display of flowers filled the tables. Julius Rohers Co. contributed a table of orchids and greenhouse climbers, and a vase of particularly fine lily of the valley, the finest Mr. Roehrs declared he had imported in 30 years, remarkable for length of stem, size of flower and fragrance. Thomas Jones of Short Hills, showed orchids, and carnations, violets, hyacinths, freesias, cyclamens came from neighboring estates. The judges for the evening were Edwin Thomas, Jos. A. Manda and Arthur T. Caparn.

J. B. D.

Hartford, Conn.

The regular meeting of the Connecticut Horticultural Society, was held in the County building, February 12. President Huss in the chair. Two new members, Thos. Hallet of the department of parks, and E. R. Pyle, were elected. President Huss reported having received $25 from A. T. Boddington, New York, to be offered as premiums in the vegetable class at the fall exhibition. A photograph was received by the society of Mr. May, who, after being connected with the J. J. Goodwin estate for 40 years, will make his future home in Florida. Mr. May is a life member of this society, and in going away carries its best wishes. The business meeting was followed by an enjoyable smoker and whist; the first prize, a handsome clock, was captured by John Gerard; the second, a bust of ex-president Lincoln, went to J. Vidbourne, and the third was won by J. Broderib. A bunch of catalogues from Elmer D. Smith & Co. was on hand, and were rapidly absorbed by the members. The meeting of February 26, will be carnation night and exhibits addressed to the county building will be received and well cared for by a committee.

GOOD BUSINESS.

The past week has been one of continued activity, gradually increasing until Saturday when the extra business on account of St. Valentine's day used up about all there was worth having; prices held firm for Saturday. The supply of roses and carnations has not kept pace with the demand, American Beauty being particularly scarce. The teas, while scarce, were to be had in fair quantities, the growers and dealers looking out as far as possible for their regular trade. Tulips, daffodils and freesias were plentiful and the daffodils went off $1. to $3 per 100. Sweet peas are selling well, there scarcely being enough for the demand. Green goods are getting scarce, the bunches of asparagus being now only about half the size of those of a month ago. There is a fine show of flowering plants now coming in. Azaleas, hydrangeas, lilies, lilacs, primulas, cinerarias, daisies, daffodils and tulips in pans and pots are seen in profusion. They appear to be in good demand. A fern not generally seen in large sizes is being offered by the Floracroft Nurseries. It is the common Pteris tremula but as grown by Mr. Stokes it resembles, with its broad leaves, the famous cibotium. It is a fast grower and can be sold for one-third the price of the cibotium.

EFFECTS OF THE STORM.

A devastating wind storm visited this city on Monday, February 10, about 1:30 p. m. and did considerable damage. The worst sufferer is W. K. Harris where the whirling cloud in center of the storm caught the western end of his houses and tore the ends out of nine of them as well as taking out quite a lot of the ventilators for the other houses. It will cost something over $4,000 to repair the damage. The storm only lasted about a minute or two; the damage appeared to be caused by suction. The vacumn caused by the rapidity of the wind drew the ends of the houses out, wrecking the woodwork and twisting iron pipes like so much wire. Fortunately the weather was not severe and the houses were boarded in temporarily before there was any danger from frost. The next day saw a number of assistants from neighboring florists. Messrs. Craig and John Burton sent some of their handy men, and these with the carpenters, before the week was out repaired much of the damage. The Philadelphia Carnation Co. and the Philadelphia Cut Flower Co., both of whose greenhouses are near Morton in Delaware county, lost considerable glass by the high wind. La Gierse of Forty-eighth and Lancaster avenue, suffered damage to two houses. Zimmer, of Collingswood, N. J., lost about $50 worth of glass and there were others who had smaller losses from the storm.

NOTES.

The Leo Niessen Co. says it had a very good week, there being a general clean up on Saturday on account of the demand for St. Valentine's day. The shipping trade had been very good. Some grand carnations were seen here the past week.

Wm. McKissick & Bros. say their only trouble is to get stock, the demand more than keeping pace with the supply. The features the past week have been a fine assortment of bulbous stock, sweet peas and carnations. They are receiving very fine Mrs. Jardine roses.

Word has been received from John Westcott and Robert Craig and party now at the Isle of Pines where they report a delightful climate, and they are enjoying every minute of their stay.

K.

FLUSHING, N. Y.—Joseph Dus, aged 50, Perry avenue, Maspeth, died suddenly, February 8, while engaged in the greenhouse of Herman Maenner at Collins and Mt. Olivet avenues.

Boston.

GREAT IMPROVEMENT IN TRADE.

Most encouraging reports are being circulated concerning the present revival of trade. The business is of the right sort, well divided up and demanding all varieties and grades of stock. Social demands are second only to those for funerals. St. Valentine with his significant sentiments was everywhere discernible and was the occasion of more business than at New Year's. Naturally the desire ran principally to the smaller flowers, violets particularly having a great run. The growers were prepared for the demand. Prices ran along an even schedule at $5 to $6 per 1,000. The greatest inconvenience is being occasioned by the short market on roses. Killarney is being largely oversold and Richmond has been completley cleaned up. Both of these varieties are in excellent shape. American Beauty is causing no end of dissatisfaction and dealers refuse to handle the goods at the prices asked, $12 per dozen. Carnations have struggled up another point. Pre-lenten social affairs are many and each furnishes its proportion of business, all taking an appreciable interest in floral requisites. The demand for gardenias, orchids and lily of the valley is principally for this class of trade and has never been so general as this season. Orchids are well represented by cattleyas and we are glad to say the public has at last come to the point of appreciation of this exclusive flower. Flowering plants are well displayed, azaleas, cyclamens and genistas all possessing superior merit. Bulb plant stock is overshadowed by this more desirable stock.

NOTES.

John Newman of Woburn, who has gradually reached the top of the ladder among violet growers, had one of his best crops well in hand for the St. Valentine's day trade. The cutting was one of the largest for a single day in his many years of growing. Preparations are now being made for increasing the capacity of the plant by the addition of a new house which will be ready for fall planting.

John Fee, as anticipated, has lived up to his expectations and is pouring into the market a crop of superb Murillo tulips.

F. W. Hardy of Natick is the first to show new antirrhinums and has a varied assortment of pleasing varieties.

Edward Arnold of Quincy has been petitioned into bankruptcy, with liabilities at $4,116; assets, $1,325.

W. H. Nicholson is showing Afterglow carnation at its best.

B.

Cleveland.

VALENTINE'S DAY TRADE.

Smith & Fetters had a very attractive window display for St. Valentine's day. The most important feature was two hearts made of Enchantress carnations joined together with a knot of white carnations; around this were pretty little hampers and boxes filled with orchids, violets, and other small flowers. The background was a bank of well flowered azaleas interwoven with chiffon.

Albrecht & Smith had a most beautifully arranged window made of various shaped violet boxes. The main feature was an elaborate heart pierced through with an arrow, this was set on an easel.

The volume of business done by The Cleveland Florists' Exchange during the latter part of the past week was far above expectations. Violets, double and single, sweet peas and lily of the valley were handled in large quantities and the quality was never better.

Reports from the James Eadie Co. show that the amount of business done exceeds last year's fully 35 per cent. The call for violets and flowering plants was extra heavy.

Mrs. J. Travers, Central avenue, says that business has increased wonderfully since the cars are running out Central avenue.

The firm of L. Warnke & Son has retired from business. The site has been bought by a real estate firm who will erect several modern business blocks in the near future. Mrs. Warnke and her son are now spending several weeks at Hot Springs, Mich.

FLORISTS' CLUB MEETING.

The carnation exhibition held by the Florists' Club at its rooms in Detroit avenue was the most successful ever held by the club. The flowers that were on exhibition were a credit to the growers, being exceptionally fine in color, size, and strength of stem. All were duly judged and certificates awarded. The meeting was largely attended by both growers from in and around the city. Adam Graham, John Kelley and John Kirschner were on the committee.

FORESTER.

Massachusetts Horticultural Society.

The following is the schedule of prizes for the great orchid exhibition to be held May 26-30, 1910:

For the best display of orchid plants in bloom, arranged for effect, embracing at least 20 orchid genera and bi-generic hybrids, and unlimited as to number of species, varieties and hybrids, to fill 400 square feet of space. In the arrangement, stove and greenhouse foliage plants may be used, and the general effect produced (with or without such plants), will be considered by the judges in making awards as per the following scale of points:

Variety of orchids	30
Quality	35
Arrangement and decorative effect	25
Novelty of orchids	10

Cut blooms of rare sorts not exceeding in number 5 per cent of the total number of varieties of orchid plants in the exhibit will be admissible.—First prize, gold medal and $1,000; second prize, silver medal and $500; third prize, bronze medal and $250.

For the best display of orchid plants in bloom arranged for effect, embracing at least 10 orchid genera and bi-generic hybrids, and unlimited as to number of species, varieties and hybrids, to fill 150 square feet of space. The conditions the

For the best new hardy herbaceous plant in bloom, likely to be hardy in Massachusetts, not previously exhibited in the United States.—Gold medal.

LECTURE ON PLANT BREEDING.

Dr. H. J. Webber, professor of experimental plant breeding at Cornell University, read an interesting and instructive paper on "Plant Breeding" at the meeting in Horticultural Hall, Boston, February 13. After going into the history of plant breeding at some length, Professor Webber said he spoke with some hesitation on this subject when he remembered that he was addressing the Massachusetts Horticultural Society, which has done so much to advance horticulture and agriculture in the past century. "I remember," he said, "the great work of this society in offering prizes for improved new fruits in the early days of the nineteenth century, when plant-breeding was indeed in its infancy. I remember the very large number of new fruits and flowers which had their origin in the stimulation given by this association. You have doubtless done the best you could and it was a great work. Yet I am convinced that the work has only just begun. If we are to feed the increasing millions of our population with our soil depleted in fertility, with our mineral deposits of nitrate of soda, potash and phosphates approaching exhaustion, we must use strenuous methods to improve our plants to the highest degree of efficiency."

Points of interest referring to wheat, peas, beans and in short nearly all the important food crops were brought up and a most interesting dissertation on apples and other fruits was given. In conclusion the speaker urged every horticulturist and farmer to adopt a breeding fad, to select some one plant which they will breed, as Jersey cows and Berkshire hogs are now bred. It costs an apple grower nothing to make a few hybrids of different varieties each year. The seeds of these hybrids can be grown in a corner of the garden at little expense until they produce shoots two or three feet high, when buds or scions can be taken and top worked into large trees. Such experiments if made generally would unquestionably, in a short time, result in the discovery of many improved varieties.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

MILWAUKEE, WIS.—It is reported that the Ward versus Currie Bros. lily bulb suit will be appealed.

CHICAGO.—The jury in the case of Robert Buist versus the Goodwin-Harries Co. found a verdict for the defendant.

SAN JOSE, CALIF., reports nearly continuous rain through January and up to February 11. All seed crops are showing some bad effects from these excessive rains.

IT is understood that statistics at Washington show the actual duty paid the treasury department on imported bulbs and seeds the past year on the 25 per cent basis about $132,000.

IT is reported that the bulk of the growing seed contract given by the Department of Agriculture the coming year has been awarded to the Braslan Seed Growers Co. of California, they receiving, it is said, an order for something over $100,000 worth of seeds.

THE L. A. Budlong Co., the well known onion set growers of Chicago, has sent us an onion distinctly marked with white and red alternating stripes varying in width from 1/8 to 3/8 inches. Mr. Budlong adds, "if someone will furnish the blue with this we shall have the national colors."

J. E. Hoopes & Co., Muscatine, Ia.

J. E. Hoopes & Co., vegetable and seed growers, are located on the northern part of Muscatine island, an oblong strip of sandy land 15 miles long and about eight miles wide. It has long been noted for its melons, sweet potatoes and other vegetables. They have been in this line of work over 30 years, and are among the leading growers and shippers of island products. In 1894 they began saving seeds. Asparagus was quite a specialty and as the rust disease had not yet appeared on the island, the fields would be red with the ripe seed pods in the fall, only to be burned off with the brush in the winter. A few hundred pounds of seed were saved and sold to such seedsmen as had sent them their catalogues. The seed proved excellent, and more was wanted the next year. Contracts were taken and filled satisfactorily. This has been kept up regularly ever since. Next, melon seeds from the famous island melons were called for, and they began to save both watermelon and muskmelon seeds.

Finding that the land was suitable for growing peppers, they began taking contracts for these seeds, and this has proved to be one of the most reliable crops grown by them for seed purposes. They grow only six of the leading varieties, namely, Bull Nose, Ruby King, Sweet Mountain, Neapolitan, Golden Dawn and Long Red Cayenne. Great care is taken to keep

J. E. Hoopes.

them isolated. The peppers are hauled to the work house, ground and placed in barrels for 24 hours, when the seeds are separated by water, the grinding and pumping being done by a 6-h. p. gasolene engine. Water costs them very little, as a pipe can be driven down a few feet at any place on the island and an abundant supply of water can be obtained as long as the old Mississippi river lasts. Tomatoes are treated the same way; the seeds being thoroughly washed, they are spread on drying pans outdoors the first day, after which they are finished upstairs on the racks in the seed drying house.

They have grown asparagus roots for seedsmen for a long time. Some firms contract ahead on them, while others run their chances of getting their roots just as they need them. They shipped out last spring 345,000 roots, and in the fall 38,500 more for southern orders, mostly one-year stock. They grow only the Palmetto. Colossal and Bonvaletti's Giant. Palmetto being the one mostly wanted, as it seems to withstand the rust disease better than the other sorts. Sweet potatoes are one of the leading vegetables grown on the island, and are stored in houses built expressly for that purpose. Their's holds 8,000 bushels. The large potatoes are stored for table use during the winter, while the small tubers are kept for seed stock the next spring. The leading kind grown is the Yellow Jersey, while the Red Bermuda, Red Jersey and Southern Queen are grown for the southern seed trade. Seedsmen are always welcome to inspect the growing crops or other things of interest to them at any time they may find it convienent to call.

Only Part Flooded—No Damage.

ED. AMERICAN FLORIST:—

In your issue of February 6 you state that my ranch was flooded. This has caused me considerable annoyance, as my customers are anxious as to the result. The facts are that only a small portion of the ranch was flooded and did no damage, whatever, to the crop. We have had a great deal of rain and will not be able to tell for some time what the results of the excessive moisture may be. Trusting you will rectify the report as published.

W. J. FOSGATE.

Santa Clara, Calif.

Flower Show at Hillegom, Holland.

IN THE OPEN AIR, OPENS APRIL 8.

In April of this year, an open ground flower show will be held in Hillegom, Holland, the center of the Dutch bulb industry. An outdoor show, which, as a first trial, was such a great success last year at Sassenheim, will be held on a more extensive scale here and promises to be very interesting. The idea is to illustrate how to obtain the best results from planting Dutch bulbs in small and large gardens, in borders, terraces, and lawns and to make the most effective combinations in beds and groups when combined with evergreens and early flowering shrubs, etc.

The show ground occupies more than three acres of land and is divided into a "French" garden and an "Old Dutch" garden. In the center of the old Dutch garden rises the town hall, an interesting oldfashioned building, and just opposite is the old church which is situated on a hill near a small brook—(old Dutch "gom," hence the name "Hill(e)gom"). It was erected in the fifteenth or sixteenth century. The brook, now turned into a canal, lies on the south side of the show ground and runs toward the old Haarlem lake half a mile away. This lake was drained and turned into useful land in the middle of the last century. The narrow piece of land between the old Haarlem lake and the show ground lies below the level of the sea and surrounding canals. A draining mill is used to pump the water from this low land into the leading canal and it can be seen from the show ground. There is also a beautiful view from the steps of the town hall over the bulb fields in this drained land, into the low lying land of the old Haarlem lake.

The show will be divided into a permanent exhibition in the open, and temporary shows in the large tents, the latter more especially for cut flowers and forced plants. The principal growers of rhododendrons, azaleas, lilacs, clipped plants, etc., will show their best products, and this part of the show will be very interesting for every florist, nurseryman and amateur. The opening date is fixed for April 8, consequently it will be open just before Easter and will be closed at the end of the first week in May.

HELLER & CO.,

Montpelier, Ohio.

Always Hopeful.

My old friends, the government seeds, have arrived, and I am looking forward anxiously to the time when I may bury them carefully in the ground, give the deep or shallow culture as called for on the packet, and then await patiently their non-coming up. Perhaps some day I will be surprised by their appearance above the ground. The arrival of these seeds is the first real announcement that spring is coming, even though at present it is lost in a maze of snow and ice.—Dedham (Mass.) Transcript.

Burned Seeds and Franks in Rome.

"An' th' Roman popylace broke into th' Sinit an' gathered up chairs, desks, stationery, franks, seeds, an' letters fr'm Jawn D. Archybold an' made a bone fire iv thim an' burned Cayzar's body in it.—Dooley in Chicago Tribune.

Imports.

During the week ending February 13, imports were received at New York as follows:

McHutchison & Co., 12 cases, one package plants.

P. Henderson & Co., 160 bags grass seed.

H. Nungesser & Co., 200 packages seed.

Schulz & Ruckgaber, 40 bags seed.

H. F. Darrow, 18 bags seed, 21 packages plants, 85 cases lily of the valley crowns.

W. E. Marshall & Co., 17 barrels grass seed.

Vaughan's Seed Store, nine bags, three barrels seed.

C. C. Abel & Co., one box plants.

To others, 169 packages, 36 cases plants, 42 packages, 37 bags seed, 82 cases lily of the valley pips.

The Farmer and Bolley's N. D. Seed Bill.

"A farmer walked into my office a few days ago," said Oscar H. Will, "and asked: 'What about that seed bill you were talking about in the Tribune the other day?' For reply I handed him the bill and after reading it twice through he asked, 'Does that mean that every time I take a load of grain to town I have got to plaster on every bag a label "Uncleaned Seeds?" I said, 'It looks that way, and furthermore all that stuff has got to be labeled at home in storage '

" 'Well,' said he, 'supposing we were short of seed grain in our neighborhood, and over in the next township they had some that was not quite pure stuff, couldn't some arrangements be made so the party could sell it to us?' I said, 'Under such a law no one in the state could sell it to you in that condition.'

" 'Well,' said he, 'us neighbors always swap around such garden truck seeds among ourselves and they are always more or less mixed but answer the purpose just the same. I suppose it means that every time I haul a load of nice hard, plump, clean corn to your store, I have got to label the sacks or if in bulk, plaster a sign on my wagon box "Uncleaned Seed." I said if the bill became a law that is what he would have to do. 'Well,' said he, 'I am going to tell ———————— if he votes for that bill and don't leave the farmers out he will get a majority vote to stay at home next time,' I said to him, 'If you leave out the farmers that would be class legislation and contrary to the constitution.' "—Bismarck Tribune.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

LEAGUE CITY, TEX.—J. E. Beerwort has erected a greenhouse 18x105 feet for growing vegetable plants for sale to truckers.

Vegetable Plants,

With the latter part of February, activity in growing returns. Figuring seven weeks to produce good cabbage and lettuce plants and eight to ten weeks for tomato, pepper and egg plants, will give the operator some data. Of course, plants can be grown in less time, but we prefer to have them come along slowly with plenty of air, and as cool as possible. We always like to use screened earth for all plant work—operations are so much easier and neater, therefore, we prepare soil in the fall, run through ¾ inch mesh screen and store, when fairly dry, in an earth shed. Next we prepare the beds, either in hotbed or greenhouse a week or 10 days before needed, level down firm and sprinkle to start the weeds. When these appear, we are ready for our seed sowing.

Drilling is generally preferred to broadcasting; yet many an old operator will not quit broadcasting, believing this method produces sturdier plants from the start. For drilling we should have markers made by joining bevelled laths at the required distance, say 2 inch, 2½ inch or 3 inch. These laths should be one-half as long as our beds are wide, for easy work; and by having say four or five thus joined, the beds can be marked neatly and quickly. Do not cut too deep; most seeds are put in too deep; just enough to permit of easy covering is sufficient. Lettuce and celery we never cover at all, just mark, seed and firm down. For sowing with the fingers, it is best to put the seed into a cup or saucer, as this is much more accessible than a sack; the best operators take only a pinch between the fingers and by one deft twist and forward move will sow one drill half the width of the bed.

However, if caught for time, or in bad weather in hotbeds, the writer has many times had some common laborer mark out the beds, and then himself broadcasted the seeds from the full hand over these little furrows, then by using a common broom to cover the seeds, most of those falling on the ridges are swept into the furrows and a very satisfactory and speedy job done. All seeds should be firmed. For this have a piece of smooth plank with a convenient handle attached. After firming, water with a fine rose and cover with newspaper to prevent the ground crusting. By sprinkling the papers occasionally, ideal conditions can be provided for germination.

One should not expect all seeds to do well in the same temperature. Such hardy subjects as cabbage, lettuce, or onions should be put into a low temperature, say 50° to 55°; while tomatoes need a warmer place. Peppers and egg plants need more heat than tomatoes. The best results are generally obtained by allowing temperature from 55° to 60° and peppers and egg plants 65° to 70°. Celery does best very cool and moist, from 45° to 50° suits it, and it is slow in germinating. Starting hardy seeds in a high temperature so lowers their vitality that the resulting plants are weaklings from the beginning. In fact, the dreaded damping off is generally caused by high temperature during germination. If hotbeds are used go slow and let the rank heat pass off. It pays to wait a week or two after beds are made up.

A New System of Mushroom Culture.

It was discovered some few years ago that minute pieces of tissue from the center of a mushroom, if planted in a suitable bed, were capable of giving rise to mycelium and, therefore, of producing fresh spawn, according to the Gardeners' Chronicle. Sutton & Sons, Reading, utilize this method in the production of the virgin spawn, which they offer under the name of "Twentieth Century." We are indebted to Arthur W. Sutton for the following account of the methods employed in the preparation of spawn: "The old style of procuring virgin mushroom spawn may be briefly described as follows: Experienced men searched old manure or compost heaps and pasture lands for the mycelium of the mushroom, which is produced naturally in such places. This they sold to growers of the commercial spawn, who placed it in beds and allowed it to run through the material forming them. The 'stock' spawn thus obtained was in due course used to impregnate the compost, which, in the form of 'bricks,' is the medium through which the spawn is passed on to the market grower or amateur. This method was more or less unsatisfactory, since the mycelium of species other than the common mushroom (Agaricus campestris) appears to have been occasionally mistaken for it, to the great disappointment of and loss to the grower.

In 1897 a process was discovered of producing virgin mushroom spawn by artificially germinating the spores, and the mycelium thus produced was sold in test-tubes by the manufacturers. The practice of propagation by spores was, of course, a great step forward, and growers could for the first time be fairly certain that the spawn they purchased would produce the variety of mushroom they wished for. However, even this system had its drawbacks, and it was hoped that a better one might be discovered. With this idea careful experiments were carried out, but it was not till some years later that the process by which our 'Twentieth Century' mushroom spawn is now manufactured was put into practice. This method is known as 'tissue culture,' and originated in the discovery that mycelium could be produced from a portion of the mushroom itself. The possibility of this, as the name of the method implies, is the underlying principle of the new culture. The process involves careful work in the be sterilized, and dust and draught rigor- laboratory, where all vessels used have to ously excluded. The manure employed has to be produced under special conditions and very carefully prepared, cleanliness being of the utmost importance. It it claimed for this process that not only can growers be quite certain that the spawn they purchase is true to name, but also that the improvement of varieties by selection is for the first time made possible, and it is a fact that the yield has already been largely increased. From a practical point of view there can be little doubt that the 'tissue culture' is an advance on propagation by 'spore germination,' which itself is an enormous improvement on the haphazard methods of 10 or 15 years ago."

The Cultivation of Watercress.

Although this most popular salad can be successfully grown in a moist and shady corner of the garden, the resulting heads are strong and of poor flavor, and its culture thus is not advised. Those who are fortunate enough to possess a

running stream of clear spring water may, however, easily secure an abundant supply of first-class material with but little trouble. Boards on edge should be inserted across the stream at distances of about six feet, so as to check the current and insure a depth of two or three inches of water. In the bottom place a 1-inch layer of clean road sand, and in this dibble the pieces of plant. Young shoots easily root, and if any trouble is experienced in procuring plants, bunches of watercress purchased in the market will answer very well. Spring is the best time to plant. Weeds must be rooted out as they appear. Cut the heads just under the water; then others will quickly appear. Do not allow the plants to run to seed. It is a good plan each spring to thin out the growths, discarding old and straggling ones and retaining the compact and robust shoots. If the boards advised above are firmly fixed, they are useful for placing stout planks upon, so that the watercress can be gathered with comparative comfort.—The Garden.

Mint Growing in England.

Two varieties of mint, known respectively as black and white mint, are grown in England for the production of the essential oil, but the area under cultivation is very limited, and it is believed that it may not exceed 1,000 acres, whilst some authorities estimate that half that area would represent the total quantity that is grown in this country.

Mint is said to grow best on land that is not more than 200 feet above sea level. It is cultivated in Japan and also in the United States, particularly in Michigan. Growers in the United States, although the quality of their oil is inferior, by sending their produce to English markets have in some measure undersold the home producers. Mint is a deep-rooted plant with underground stems or runners, and it can only be grown profitably on good, light, warm soil, that which suits it best being a deep rich loam on gravel, but it will thrive well on a chalky subsoil. It likes a moist spring and a dry hot summer. It is grown from roots, not from seed. The land is prepared during the winter as for a corn crop, about 20 tons per acre of manure being plowed in. A fine tilth must be obtained. The plants are dibbled in in May, in rows 12 inches to 15 inches wide, and from 12 inches to 18 inches apart. The plants are sold by the bushel and about 10-12 bushels go to an acre. The ground must be kept clean by frequent hoeing. As a mint plantation only lasts from four to five years it is necessary to form three or four beds that will come on in succession, and this is usually done in the following manner: In the autumn after the crop has been cut trenches are dug from eight to ten feet apart, 15 inches deep and 18 inches wide, the displaced earth being spread over the plants between the trenches.

When the plants spring up some are transplanted to another bed, the area under cultivation being extended, and so on from year to year, so that at the end of the fourth year, when the first bed is dying out, the others which have been made take its place and continuous succession is obtained. If the plants are not required for extending the plantations the land is plowed with disc coulters, and in the spring it is harrowed down. The mint plantations in their second year give the best results, and each year afterwards they gradually deteriorate. When the plantations are broken up at the end of four or five years, the same land should not be used again for mint growing for many years. The mint is cut about the beginning of September, when the plants flower or when a red rust called snuff appears on the leaf. The crop is left on the ground after cutting to dry, and then packed in Russian mats and carried to the distillery.—Journal of Horticulture.

WEST GROVE PA.

British Potato Crop.

Consul Walter C. Hamm, at Hull, reports that 1908 will be known as the "potato crop year" in the annals of Great Britain, his particulars being as follows: The English, Scotch and Welsh potato farmers agree that the harvest this season has established a record. The yield is stated to be almost exactly 4,000,000 tons in Great Britain, or about seven tons per acre. This is nearly 1,000,000 tons greater than the crop of 1907, and about 250,000 tons above the next highest crop, which was produced in 1897. The production is so large, in fact, that farmers find them a burden, and in some cases hardly worth while to carry to market.

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points February 13 were as follows: New York, mushrooms, 25 cents to 55 cents per pound; cucumbers, $1.50 to $2.50 per dozen; lettuce, 75 cents to $1.25 per dozen; tomatoes, 11 cents to 22 cents per pound; radishes, 75 cents per dozen bunches; asparagus, $6.50 per dozen bunches; rhubarb, 75 cents to $1 per dozen bunches. Chicago, cucumbers, $1.50 to $3 per dozen; lettuce, $3 to $5 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 30 to 40 cents per pound; radishes, 40 to 60 cents per dozen bunches; asparagus, $2.75 to $7 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.25 per pound; peppers, 40 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound, extra fancy, 14 cents.

Henry Klopfer.

Chico, Calif., January 20, 1909.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

GOSHEN, IND.—Fred Dailey has secured the contract to decorate Menaugh addition to Oak Ridge cemetery.

JENS JENSEN has retired from the superintendency of the Chicago West Side parks, in order, it is said, to give more time to his landscape work for private individuals and other cities. He still retains a connection with the parks, however, and will overlook them while the work he has carried out is developing.

MOUNT VERNON, N. Y.—Arthur Dummett, Inc., one of the oldest nursery concerns in Westchester county, will open an office and show rooms at White Plains. The building, opposite the postoffice, will be remodeled and redecorated. There will be large show windows in front and a new greenhouse will be built, 30 feet long, fronting on Spring street.

AUSTIN, TEX.—Commissioner Kone, of the State Department of Agriculture, gave out a statement to the nurserymen of the state February 4 on the subject of the brown-tail moth, urging them to be very careful when receiving shipments of nursery stock from France and to notify the department promptly so that proper steps can be taken to inspect the stock before it is distributed.

THE executive committee of the American Association of Railroad Gardeners held a meeting in Chicago February 2, and decided to hold the next annual convention at Philadelphia in August. The day was not fixed, but it will be immediately after the meeting of the Society of American Florists at Cincinnati, the object being that any of our members who desire can attend the florists' convention. After the Philadelphia meeting it is the plan to make about a week's inspection of railroad gardening in the vicinity of Philadelphia, New York and Boston. All railroad employes connected with the gardening department of North American railroads are eligible to membership.—G. B. M.

Government Inspection of Imported Stock.

The bill introduced into congress by Representative Scott of Kansas and favorably reported by the house committee on agriculture, providing for government inspection of nursery stock at the port of entry, has received some favorable comment from those who are alive to the danger of importing such pests as the gipsy and brown-tail moths. This bill makes it unlawful for any transportation company to bring nursery stock into the country unless accompanied by a certificate of inspection from an official expert of the country from which the shipment is made. I have not seen the text of this bill and my knowledge of it comes from the despatches in the daily papers. While such a law will not be prohibitive, it may have the effect of curtailing the importation of certain kinds of plants. A thorough inspection of shipments at the port of entry means the complete unpacking and overhauling of the package, and repacking for further shipment, a proceedure not particularly conducive to the vitality of the stock.

JOHN F. COWELL.

Hard-Wood Cuttings.

My attention has been called to an apparent diversity of opinion in regard to the length of hard-wood cuttings. I fancy the diversity of practice is more apparent than real. It is, of course, to some extent a matter of individual notion, but underlying are certain requirements which must be met in order to produce a successful strike of vigorous plants. The length of cuttings for outside planting varies from six inches to a foot or more, and under certain conditions a cutting the size of a fence post may be the proper thing. A cutting should be long enough so that the lower end will be deep enough to be beyond the reach of ordinary periods of dry weather. Aside from this reason the cuttings might in many instances be made quite short. To make them much longer would greatly increase the labor of setting. With certain plants the trade requires a certain length or number of nodes. In some of the grape-growing districts the demand is for plants having two tiers of roots, and this means that the cuttings must be made with three tiers of buds. In the case of some of the stronger growing varieties this makes a cutting of from 15 to 18 inches, and the work of setting is considerably more than in the case of the cutting of 8 to 12 inches.

Where shrubs are propagated under glass the cuttings are usually made very much shorter, say from one to six inches, and frequently only one bud is taken. Of course the length will vary with the character of the species. In making cuttings of willows, poplars and some other species which are to remain where struck, a length of several feet may be desirable and proper. And this reminds me, that it is not too late to take cuttings of many species. While it is, perhaps, too late for shrubs that have the habit of rooting from the end or from the callus, yet most of side rooters, as they are called, may be taken any time this month, and some of them as late as May 1. The greater number of our shrubs which are propagated from ripe wood, however, require some time to form a callus from which the new roots spring, and these are uncertain if taken after the end of January. The trouble is not that the wood has been injured by cold, but that the leaves will begin to grow before the callus can be formed and the roots emitted. This leaf growth exhausts the sap and leaves nothing to form roots.

A BIT OF HUMBOLDT PARK, CHICAGO.

I have seen it suggested recently that early January was a good time to take cuttings of conifers. This may do in more favored climes than this, but here the result would be a failure. Unlike our deciduous shrubs, the evergreens are affected by the cold in a way that reduces their vitality seriously and renders them unsatisfactory for propagation. We prefer to take cuttings of all of our conifers before the wood has been severely frozen. October is the month in this latitude according to our experience, though some, like our native yew, may be taken off a month or two later. All the conifers require a long time to callus and root, some of them often remaining in the cutting bed nearly a year before rooting. During the callusing process nearly all cuttings are better kept in the dark and in a temperature that will not excite top growth.

JOHN F. COWELL.

A Bit of Humboldt Park, Chicago.

The illustration herewith, which we are enabled to publish through the courtesy of Jens Jensen, late superintendent of the Chicago west side parks, shows the head of the pretty piece of water gardening in Humboldt park. It has not been completed long enough to show its full beauty but all last summer it was

a popular part of the park with visitors and was most attractive. Mr. Jensen has the happy faculty of so blending his new work with the old that there is nothing inharmonious or suggestive of a dividing line. The one appears to grow out of the other as it were and this has helped materially to make a successful whole out of what appeared to be rather unpromising material.

From the part illustrated the water is taken in several directions through banks of artificial rock work, cunningly devised and very natural in appearance. Various devices help to give this effect, including in one place the water bubbling up through sand as we have before described. Many choice herbaceous, bulbous and other subjects are planted along the banks and in proximity to the streams which join a large lagoon lower down in and around which the better known native and other aquatic and waterside plants are successfully disposed. The flowering plants are so arranged as to keep up a constant succession of bloom all through the spring and summer and well into the fall, the shrubs also being of considerable interest. Altogether it is a charming and most successful portion of the colossal undertaking of this well known landscape artist.

Flat or Plate Budding of Roses.

P. Foliard describes the so-called Forkert method of budding roses at length in a recent number of the Journal des Roses, which he describes as a great success and the simplest of all budding processes. It has been somewhat in use with shrubs and fruit trees for many years, but seems only recently to have been applied to the rose. It is, however, coming into general use, and M. André Leroy, of Angers, is quoted as claiming it to be "incontestably preferable to all others for the roses and to be highly recommended." Budding stock may be chosen as for ordinary use, except that the buds may be greener and less strong than for the ordinary process, without fear of failure.

The branch chosen, the eye is detached with a budding knife, retaining only a very thin slice of the bark. The size of the cutting matters little, but it is usual to cut the lower end long enough to slip under the tongue made by cutting the wildling or stock, and thus hold the bud in position until it can be tied. The part above the eye may also be cut a trifle long and trimmed by a transverse cut to fit the cut in the wildling. The incision in the wildling should also be made, as far as possible, to remove the bark without cutting the wood. It is not necessary that the two cuttings should exactly fit, and in case of feeble eyes grafted on strong stocks, the cutting on the wildling may even be larger than the eye, when a deposit of cambium will form and hasten the joining and healing of the wound. The stem is then bound with raffia. M. Leroy advocates the use of wax, but the author maintains that much the best results are obtained with small eyes and simple tying. The important matter is that the eyes shall be kept in perfect contact with the stock until the joint is perfectly apparent—usually 10 days suffices. It is well then to remove the little projection of bark which has retained the eye in position, as this tends to interfere with the circulation of the sap, and to remove the band of raffia by a cut on the opposite side of the stem, if it seems too tight. As to season, M. Foliard recommends March, April and May for growing eyes, and August, September and even October for dormant buds; between these times, success is not assured. The method has been used successfully on lilacs, currants, grapes, peaches, plums, apples, weigelias, etc. It is surely well worth experimenting with.

Johnny Appleseed.

The first fruit trees in Hancock county were planted by "Old Johnny Appleseed" and a few of the trees he planted from seed, are still in existence, or were a few years ago, at Indian Green, and in Delaware township. According to the Newark Advocate, "Johnny Appleseed," the pioneer nurseryman of Ohio, is to have his birthday anniversary celebrated in due form from this time on, at least in Licking county.

Though the exact date is not authentically known it was decided January 5 would fit and that day in that county was held a proper celebration of the anniversary of one of the most eccentric men who ever trod the hills and dales of Ohio. It is thought that Jonathan Chapman, which was the man's real name, was born in Massachusetts about the year 1775, but he was first heard of here in 1801. From that time on till his death in 1874, he was a well known figure throughout the state. The Indians considered him as insane, and according to their belief that such a one was "under the care of the Great Spirit," they never molested him, but assisted him in every way they could. Not only Ohio, but all the states between the Ohio river and the Atlantic coast were visited by him. As a result you may see while driving along a country road, great gnarled apple trees, the fruit of the work of "Appleseed Johnny."

ELI CROSS, 25 Monroe St., Grand Rapids, Mich.

Rochester, N. Y.

Sixty-five persons attended the first banquet of the Commercial Florists' Association at the Hotel Eggleston February 11. Before the supper a business meeting was held at the store of Geo. B. Hart, 24 Stone street. It was decided to invite the Society of American Florists to hold its national convention in this city in 1910. In this connection a resolution was adopted unanimously, favoring the enlargement of Convention hall, along the lines endorsed by the chamber of commerce. The subject of a flower show the coming fall also was favorably considered, but definite action was deferred.

The local association was organized by the retail florists. It has a membership of about 100 and includes growers, private gardeners and members of allied industries. The officers are:

F. W. Vick, president.
A. H. Secker, vice-president.
H. B. Stringer, secretary.
W. L. Keller, treasurer.

W. H. Dildine, of James Vick's Sons, was toastmaster at the banquet, and Chas. A. Brown, of Brown Bros., nurserymen, extended greetings and good wishes on behalf of the Nurserymen's Association, pointing out some of the benefits of organization. A. H. Seeker, of Salter Bros. spoke on "Organization." W. L. Keller, of J. B. Kellers' Sons, had for his subject, "Our Vocation." R. G. Salter, spoke on "Sociability." Geo. B. Hart gave a brief sketch of the association and referred to the forthcoming national convention. W. D. Vallette traffic manager of the chamber of commerce, outlined methods of work necessary for forwarding such an organization. He invited the members of the association to be the guests of the chamber of commerce at its first open meeting in March, and assured them of the hearty co-operation of that body.

VICTORIA, B. C.—D. D. England, superintendent of parks, has published a long and interesting report of the work done by himself and staff in the park system of the city and vicinity. He also recommends a great deal of work in the coming year.

SUCCESS WITH CHRYSANTHEMUMS

Depends upon four important factors: **Varieties grown,** quality of stock, cultural methods and market price. If the first two are carefully considered, the others are easier controlled. Our hobby is the **BEST COMMERCIAL KINDS.** These we grow in quantity, and the quality of our stock is unsurpassed.

We also grow those suitable for any other purpose.

Let us have a list of your wants before placing yonr order.

McCRAY REFRIGERATOR CO.
960 Mill Street, KENDALLVILLE, IND.

Grand Rapids, Mich.

When W. L. Cukerski retires from the office of superintendent of parks to go into business as a landscape gardener, horticulturist and florist at the corner of Valley avenue and West Fulton street, he will leave behind him visible proof of the effectiveness of his labors in the service of the city; the parks in their summer beauty stand as monuments to his artistic skill as a landscape gardener, of his ability to accomplish large results with small financial outlay. Eighteen years ago when Mr. Cukerski became connected with the city parks, we had little cause to be proud of our park system. Today the praises and delighted exclamations of outside visitors to the parks and especially to John Ball park, testify to his good work. Travelers who have seen other parks admit that in John Ball park this city has one of the most charming parks on either side of the Atlantic. Much of the credit of this condition is due to the skill, good taste and wise direction of Mr. Cukerski. With rare sound sense he has not sought to replace the beauties of nature, but rather to preserve and embellish them. The influence of his work has been felt throughout the entire city. In some cases he has assisted directly in the creation of landscape effects that have increased the beauty of the residence districts; in many other cases his accomplishments have served as models that have guided citizens in improving their individual properties.

Mr. Cukerski retires from office with a record of which he may well feel proud and Eugene Gobel, sexton of Oak Hill and Greenwood cemeteries, now assumes charge of the city park system in addition to the cemeteries. Mr. Cukerski has purchased 18,000 feet of glass to grow plants in connnection with his landscape work. The houses will be built early in June.

The following resolution was passed by the park board:

Resolved, That this board does hereby express its appreciation of the faithful service rendered the city by Mr. W. L. Cukerski, who, for 18 years, has so wisely and conscientiously guided the work in our city parks as superintendent, and who now resigns to engage in private business.

Resolved, That this board extend to him its best wishes for his future success and happiness. That an engrossed copy of this resolution be furnished Mr. Cukerski and that it be also printed in the daily papers of our city.

(Seal) Board of Park & Cemetery Commissioners.

SADDLE RIVER, N. J.

THE BEST WAY
to collect an account is to place it with the
National Florists' Board of Trade
56 Pine Street, NEW YORK,
WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

Brampton, Ont.

So far this season we have had the most changeable weather ever experienced in this district, together with a minimum of sunshine. The temperature has been below zero and in a few hours has changed to rain and then changed again as quickly to nearly zero. Business has been moving quietly along and on the whole, has been very satisfactory with prices about the same as last year, although there has been a scarcity in some lines. There has been no American Beauty or Morgan roses on the lists and Richmond, Killarney and Queen are very scarce, the most of the stock coming from those good old stand-bys, Bride and Bridesmaid. There has been a fair supply of carnations and the quality has been better than usual at this time of year. Prices have been very reasonable and the demand at times has been greater than the supply. Orchids have become very scarce except Lælia anceps which is going at $10 per 100. It is not expected that the shortage will last more than a few days when there will be a good supply again. Bulbous stock has been coming in in quantity, but the demand has kept it cleaned up so that nothing has been wasted.

NOTES.

Mark Henderson has purchased a piece of land, about 10 acres, at the south end of the town where he intends to put up some glass and start forcing vegetables.

The Dale Estate is handling a line of bronze magnolia leaves which are very pretty in some designs.

Robt. Jennings has a fine bench of sweet peas just coming into bloom; they are exceptionally good.

L.

Attention!! Glass Buyers!!
Buy Now. Next Week May Be Too Late
Prices have advanced at factories, but we still have a large stock of fine quality **GREENHOUSE GLASS** bought on old basis, and which we are offering this month at ATTRACTIVE PRICES.

It Has Been A Great Help.

ED. AMERICAN FLORIST:—

I have been very well satisfied with the AMERICAN FLORIST, and am always anxious to receive it. It has been a great help to me and I would not be without it for many times its price.

JOHN YOUNG.

Windber, Pa., November 23, 1907.

FREEPORT, ILL.—The funeral of R. W. Gardner, formerly in business here, was held at the home of his sister, Mrs. George Elvey, 73 Fifth avenue, February 6. Mr. Gardner was born in 1853 at Rock Springs, Pa. While still a young man he came west, arriving here in the spring of 1874. In 1877 he was married to Miss Susan J. McKibben. He was stricken with epilepsy in the summer of 1887. From this affliction he never gained relief.

Nurserymen

PRICE $3.00.

Glen Cove, N. Y.

The regular monthly meeting of the Nassau County Horticultural Society was held in Pembroke hall February 10. There was not such a good attendance as usual. An exceptionally fine lot of stock was staged for the monthly-points competition, conspicuous among which was a vase of gardenias shown by J. Wilson. S. J. Trepess showed a beautiful plant of Cœlogyne cristata, which attracted much attention. The flowers, plants, fruit and vegetables staged for exhibition were exceptionally fine.

J. A. Robinson, Center Island, and Joseph Quentin, Hempstead, were elected to active membership.

Sometimes You Forget

That we make every part of a greenhouse but the glass—that we sell any part.

You remember us on the bigger things, but often it never enters your head to think of sending to us for a tub of putty or a few fiittings.

But you ought to— and here's why:

Our sole business is manufacturing every part of a greenhouse. We give it our undivided attention.

Everything we make is made with an exact knowledge of just what conditions it must meet, and that is why an ever increasing number from all over the country are continually sending us their orders for just the smaller things.

You know how well we do the big things, and if you will only stop to think, it is just because of well done little things, that it is possible for us to do so thoroughly and enduringly the big things.

So whether white lead, glazing nails bench fittings, it matters not what, first write to

USE COLD-FRAMES TO INCREASE GREENHOUSE CAPACITY!

Hot-Bed Sash
Size 3x6 ft. 1¾ thick. Glazed with 6-inch glass
$1.69
Dealer's Price $3.50

It is easy to avoid overcrowding your establishment with the thousands of young plants that demand so much room. **Cold-Frames solve the problem!** We sell the best Hot-Bed Sash made, for such low prices that you can **double** the capacity of your plant at moderate cost.

Transfer Bedding Plants and Plants for Stock to Cold-Frames Until Ready for Planting or Marketing

Build your Cold-Frames, run steam pipes through them and simply use sufficient heat to keep out frost. **It pays big!**

20,000 HOT-BED SASH in Lots to Suit, at Cut Prices!

Gordon-Van Tine Hot-Bed Sash are made of Louisiana Cypress, with blind-mortised, double-shouldered joints which are absolutely moisture-proof. Primed with pure raw Linseed Oil. Glazed with Greenhouse Putty and plenty of points. Strongest, most durable Hot-Bed Sash on the market. Prices lower than anywhere else in America.

Size 3x6—1¾, glazed with 6-inch glass, **$1.69.** Size 3x6—1¾, glazed with 10-inch glass, **$1.75.**

GLASS AT 300% SAVING! We buy glass in immense quantities, and sell at cut prices that save you 300 per cent.

Louisiana Red Cypress

As described by Bassett & Washburn, Chicago.

"Replying to your favor requesting our experience with Pecky Cypress we will say we have been using this grade of Cypress in our greenhouses and plant benches for the last ten or twelve years and so far have not found any of this wood that has all rotted out. We formerly used Hemlock and Pine, but found that two-inch stock only lasted about four years, while so far we have had no Pecky Cypress rot out in ten or twelve years. We use clear Cypress for all our roof work, ventilators, etc., and it is very satisfactory. We think it is the only kind of lumber for the purpose."

IT IS THE MOST DURABLE WOOD KNOWN. Ask about it at your local lumber yard or write

American Greenhouses in France.

We learn from the King Construction Co., North Tonawanda, N. Y., that an order has been received by cable from Richon & Hermes, a prominent horticultural concern at Parame, France, for two of its large iron frame greenhouses. Before deciding to increase the greenhouse plant, Mr. Richon made a visit to England, Holland, Belgium and Germany in search of the most modern construction. Two visits were also made to the United States. The fact that the King Construction Co.'s iron frame greenhouses have finally been selected, is certainly a compliment to the company as well as a tribute to the advanced state of the art of greenhouse construction in the United States.

The furnishing of commercial greenhouses by the United States to European countries means the opening of a new field for American products. It is stated by the King Construction Co. that negotiations are in progress for the placing of other orders and that by the end of the season it is expected there will be numerous greenhouses of this type erected in European countries.

Louisiana Red Cypress.

While there are those in the northern country who, because of their lack of knowledge of the engineering problems to be solved, claim New Orleans to be far behind the times in the matter of water supply, it is, nevertheless, a fact that New Orleans has the unique distinction of being probably the first city in the United States to put in a waterworks system and to operate it successfully.

For years northern visitors to New Orleans have been curious regarding the above ground cisterns in the shape of cypress tanks with which the city is supplied from one end to the other. The purity of the water from these tanks has also been a source of suprise, in view of the fact that many such tanks in use today are 50 years or more old. Each household is supplied with one or more tanks (or cisterns) and the residents are very strenuous in their opposition to the order, which will soon become effective, to remove these tanks and depend entirely upon the new waterworks system now being installed.

In the olden times, considerably more than 100 years ago, there were many wealthy French and Spanish families residing in that portion of New Orleans north of Canal street to Esplanade avenue, and between Rampart street and the river. A number of these families decided upon a waterworks system of their own, to supply running water for general use and for fountains in their courtyards, and it was during the French sovereignty of Louisiana that the system was built. The mains were of cypress logs 18 feet long and averaging 22 inches in diameter, through which, end to end, were bored 5-inch holes. The sections of pipe were joined, end to end, by iron connections driven into the end of each log. Wooden plugs made of cypress were used at the ends of the various mains and to cut off the supply from a delinquent consumer. The system started at the foot of Canal street, extended to Chartres, and for several blocks out Chartres, with branches running each way. A large wooden tank was constructed at the foot of Canal street, wooden pumps were installed, and slaves were constantly employed pumping water into the tank by hand. The water mains were connected with this tank and the gravity system of distribution employed.

It is not known just when this system was installed, but it is known that Benjamin Latrode was granted certain privileges and took over the system in 1811. Presumably the system had been installed quite a number of years before, but it is impossible to state how many. Latrode evidently had his troubles and failed in the extension of his waterworks system, as the plant passed into the hands of the Commercial bank in 1833. The bank operated the plant for a great many years thereafter, and it was only superseded by the more modern system installed some years ago.

The cut shown herewith is a section of the old main, and there is also a connecting pipe and a plug. The cypress is in as sound condition as when it was installed, although the metal connection is badly corroded. This section of pipe was dug up in Chartres street a few years ago, having been under ground for more than 100 years. The owner of this old relic insisted upon the decorations before he would allow the photograph to be taken.

BUSINESS GOOD.

Business last week was good; flowers were not very plentiful and sold at good prices. St. Valentine's day business was unusually good. Violets were not quite so popular as formerly; roses sold best and there was some demand for pot plants.

NOTES.

Dr. Dow, who formerly had greenhouses near this city, has lost his father, Mr. Dow, Sr., fell dead on Pennsylvania street on Saturday. Dr. Dow has the sympathy of all his florist friends.

The St. Valentine's day picture in Bertermann Bros. window was an immense valentine card about five feet square showing cupid surrounded by flowers.

Warner & Co. is the name of a new firm doing business at 1614 College avenue; both partners are well known locally.

Meyer Keller of the South Park Floral Co. is at St. Vincent's hospital, recovering from an operation.

H. W. Rieman has added another very stylish two-horse wagon to his delivery department. J.

Painted Flowers in Winter.

How strange to greet, this frosty morn,
In graceful counterfeit of flowers,
These children of the meadows, born
Of sunshine and of showers!

How well the conscious wood retains,
The pictures of its flower-sown home,
The lights and shades, the purple stains,
And golden hues of bloom!

It was a happy thought to bring
To the dark season's frost and rime
This painted memory of spring,
This dream of summer-time.

Our hearts are lighter for its sake,
Our fancy's age renews its youth,
And dim-remembered fictions take
The guise of present truth.—Whittier.

SUGGESTIONS FOR PLANT GROWERS.

Easter Lilies.

Pot plants of Easter lilies are always good sellers around that time, and it is well to select the plants and so treat them that they will be on time. It is much easier and more satisfactory to keep them back a little at the finish than to have to hasten them, unless, as sometimes happens, the weather is unseasonably hot around Easter. Any plants then that are likely to be behind, or that are not beginning to show signs of bud formation should have the temperature gradually increased. With pot plants good foliage is a valuable asset, so keep them well apart and use care, when moving them around for a new stand, not to damage the leaves by bruising. See, too, that insects are given no quarter: if any appear and, as a preventive measure, fumigate lightly once in two weeks. From the time the buds have attained good size, and before they begin to droop the plants can easily be retarded by keeping them cooler and shading, but it is not advisable before this stage.

Forcing Lilac for Easter.

For forcing lilac we have found Marie LeGrey for white and Charles X for pink the best varieties. The plants come from Belgium and as soon as received are heeled in in some well protected spot and as wanted after a good frost are brought inside. The plants are potted and placed in a warm, moist atmosphere and kept dark. The temperature should be about 70°. Syringe several times a day to help swell the buds, and keep the plants from drying out. When the flower has somewhat advanced bring into a light place. A temperature of 65° or 66° will bring good results and the plants must be kept syringed. For Easter forcing the plants should be brought inside about four weeks before Easter. As the season advances the plants can be brought directly from outdoors into the light. A rose temperature suits them well at all times.

Palms.

After the dull weather experienced in many sections this winter the foliage of palms is very apt to be soft and easily injured by bright sunlight. We do not advise shading a day earlier than is absolutely necessary, and the time may be put off considerably by careful growers who will ventilate early and damp the floors and stages in the palm houses regularly. Still with the advent of March there are frequently bright, hot bursts of sun, often when cold winds blow and the ventilators cannot be opened much and this is when the plants suffer. Be warned in time, and on a bright day of this kind feel the foliage and if it is inclined to heat up use some shading. Just at first a little muddy water or thin whitewash thrown over the glass from an old syringe will be sufficient break for the sun's rays. But do something, for palms once burned are much depreciated in value, at least for the season, and it behooves the grower to be on his guard.

Azalea Mollis.

Careful handling at all stages is necessary with the imported plants of Azalea mollis. The flower buds are very prominent and the least touch will sometimes break off a number of them, thus rendering the plants far less attractive at flowering time. Another cause of bud dropping is a very dry atmosphere after the plants are potted. The clumps should be placed in pots just large enough to take them easily, as they do not make a great deal of root; the soil should be well firmed around the clumps and given a thorough soaking of water. As the root action will not be very vigorous, this will last them for some time, but, as hinted above, the tops must be kept well moistened, this being done by frequent spraying. Azalea mollis differs from many other shrubs we force in that, if necessary, it may go into heat at once, the stored up nutriment in the buds being sufficient to insure the formation and development of the flowers. Not that this is good cultural practice. If the plants were to be kept over for another season we should say let them come along steadily. But where the plants are needed in flower early this azalea and the Ghent varieties will answer to heat better than almost any other plant that has not been artificially retarded, and the condition of the plants after flowering is a matter which little concerns the grower. If well colored flowers are

needed the heat and moisture should be reduced as soon as the color of the buds can be seen, as the more slowly, in reason, these develop, the better the color will be, especially in the pink varieties.

Begonia Gloire De Lorraine.

The earlier now the propagation of Begonia Gloire de Lorraine is finished the better and larger the plants will be for though, apparently, the plants make better progress in the early summer months yet they are rooting and gaining strength and will start up the better for it. Cuttings made from leaves are best and these should be inserted just to the end of the stem in rather loose sand as the roots at first are rather weak. Water them carefully so as not to wash the sand away from the leaf and keep it always moist. The atmosphere around the cuttings must also be kept close and rather moist to insure fast and rapid rooting. Where earlier inserted cuttings are well rooted these may be potted into the 2-inch size, using a very light compost of principally sand and leaf mould. Stand them pot thick at first and until they recover from the disturbance, but afterwards, when re-established, place them well apart so that the air plays freely around them. A good clear light, with shade from bright sunlight, will be necessary from this stage onward.

Cyclamens.

When cyclamen seed was sown in August or September as advised the plants should now be nice stocky little specimens, standing well apart with several leaves and fit for potting into 2-inch pots. The advantage of thin sowing will now be apparent as the plants will not have become drawn on any side; they will be well rooted and will rapidly take hold of the new soil in the pots. Prepare a compost of good fibry loam with a third of peat and a little dried cow manure and sand and use dry, clean pots so that, when turned out for their next shift, the roots will slip out easily and without damage. This they will not do if wet or dirty pots are used. In potting let the young corm be just beneath the surface. If deeply buried on the one hand, or left entirely uncovered on the other, progress will not be so rapid. Just buried the bulbs soon lift of themselves so that the crown just peeps out of the soil, and all is well. Give one watering to settle the soil well, and after that, until the roots are again established, water with great care. A shelf near the glass is the best place for the plants, but in any case the benches used for them must be in a good light. Keep the old plants growing for another month if they are to be kept over; if not, throw any of them away that are not needed for seed saving.

Begonia Clibran's Pink.

The fine new winter flowering begonia, herewith illustrated, has been already referred to under our "Plant Notes," in the issue of January 16. It is a hybrid between B. Socotrana and a summer flowering tuberous variety, and it received an award of merit from the Royal Horticultural Society of England when exhibited at Westminster in November last. The flowers average three inches in diameter, are perfectly double and of a bright pink color, produced in long, drooping sprays, carrying from 8 to 13 flowers each. The plant is a good grower and a free bloomer, with handsome, dark green leaves. It is totally distinct and is a great advance upon previously existing varieties.

THE RETAIL TRADE

SAINT PATRICK'S day is coming. Don't go to the extreme by dying roses and tulips. It is all right for a carnation but stop there. Get an old harp, cover it with smilax, making the strings of gold and filling the base with green carnations; it might be wise to keep daffodils out. Make a curtain of smilax in the background. Plants of oxalis sell well on this day.

The Broken Column.

SEE SUPPLEMENT WITH THIS ISSUE.

The broken column is an old design but a very beautiful one when well carried out and one that the up-to-date retailer will do well to cultivate. Good and suggestive designs that are at the same time artistic are not too plentiful and we cannot afford to let any of them pass into oblivion. In winter, or at times when stock is high in price, there may be a reason for turning down such a design, as it uses a lot of stock, but in summer, when asters and other flowers are plentiful, it is one of the most satisfactory, both to retailer and purchaser. The shaft of the column here shown is of white asters with a band of roses and adiantum while the base is composed of Lilium auratum, roses, sweet peas and fern.

Begonia Clibran's Pink.

A short time ago the writer had occasion to make a similar design which was very attractive and may be briefly described. The shaft was made solid of violets with a band of white orchids (Dendrobium formosum) and Adiantum Farleyense, the base being composed of polished ivy leaves with a large cluster of violets, white orchids and Farleyense well off in the left corner. This was simple but the effect was very rich and good and the design gave the greatest satisfaction. We remember the time when it was not unusual for gardeners to come into the store with baskets of short carnations, asters or other flowers in summer and they were glad to sell them for 50 cents or 75 cents per 100. But today the commission man wants from two to four cents each for such stock so there is a very good reason for the retailer not running into such designs as this when he is tied down to a certain price. But there is something very telling and rich about the broken column when properly done and we should be sorry to see it become obsolete. S.

The Window as an Advertisement.

THE FUNCTION OF ADVERTISING IS TO AID EXCHANGE.

The retail flower trade as now developed is not a bolt from the blue, but a process of evolution. In a condition of wild nature, only the hardiest survived. The original crude gardener rightly thought that a little shelter would protect the weaklings. The crude method he had at hand was to make a depression and let the wild blasts blow over the sunken vegetation. Pits are necessarily cumbersome and the range of production is circumscribed. The crop grown under such conditions had to take in favorable weather conditions. To operate pits in winter is like keeping open an ice-bound harbor.

The invention of glass was accidentally discovered. Presumably the aid of glass was accidentally hit upon by some experimental gardener. The knowledge that the sun's rays would penetrate glass and the heat be bottled up and utilized was an immense advancement over crude pits and the gardeners' product was limited only to the amount of space he was able to cover with greenhouse construction. Another problem was to get the supply nearer the demand in order to facilitate exchange. Retail stores sprang up naturally and the retail florist was in the fourth remove from wild nature.

Now that retail stores are permanent institutions, the problem is to operate them economically and efficiently. The prime requisite is to give satisfaction to patrons and the florist can depend on their support. The present writer has evinced a taste for the economics of advertising in bridging the gaps of distribution and exchange and can confirm the statement of advertising agencies that money paid for publicity is largely a social waste "The window is the eye of the shop." Therefore it would be good policy to have attractive windows with an artistic touch thrown in and not a heterogeneous mass of vegetation. To advertise promiscuously is like casting pearls before swine. Better spend the money in developing interest and instructing the public taste.

Detroit. MICHAEL SULLIVAN.

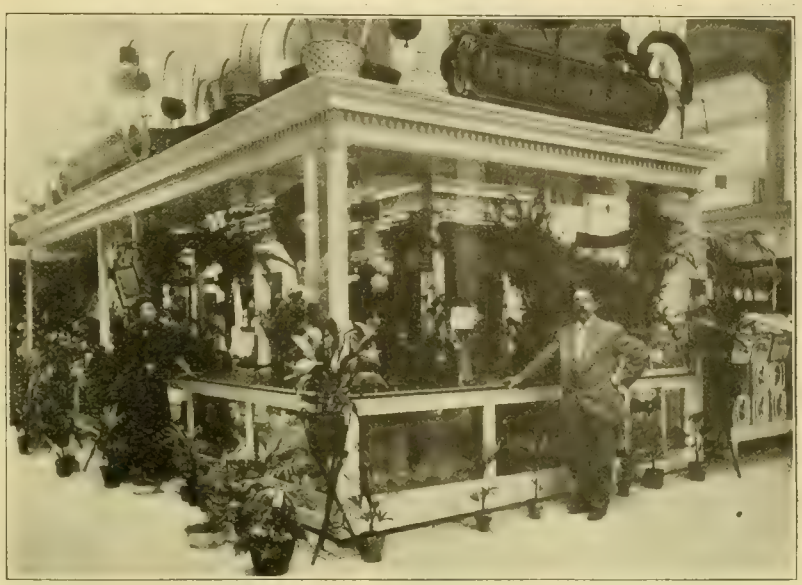
Pansy Decorations.

A decoration for a luncheon that is seldom seen, yet which may be made very effective, is a low silver bowl filled with pansies of all colors. If the stems are short, a piece of wire netting can be placed over the top of the bowl and the pansies stuck in it. The effect is enhanced if the bowl is set on a large, round mirror surrounded with a border of small ferns. At each plate have a small pot of growing pansies, which may later be given as souvenirs. These look well if the pots are set in small paper cases made of stiff cardboard covered with silver paper.

Should there be a guest of honor his or her plants may be larger than the other, or the case can be a small silver jardiniere. The candle shades should carry out the predominating tones of the pansies. Silver candlesticks should be used if possible. Effective shades can be made of white paper garlanded with artificial pansies.—Washington Times.

The Francis Floral Depot.

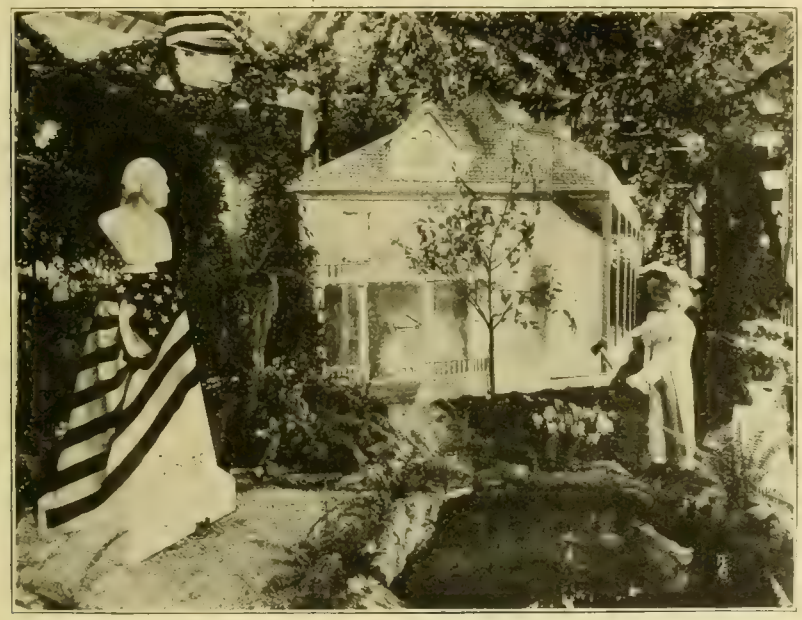
The accompanying illustration shows the attractive store of Frank T. Schlotzhauer recently opened in the California market, San Francisco, Calif. Mr. Schlotzhauer, who is running it with the assistance of his daughters, is an eastern man, well known in New York, where he was with G. M. Stumpp, 761 Fifth avenue, for 17 years. Although he has been only a short time in business in the California market, he has built up a fine trade with his artistic and original work. His stall is located in about the center of the market, which is one of the finest in the country, 38,000 square feet of white tiling having been used in its construction. P.



RETAIL STORE OF THE FRANCIS FLORAL CO., SAN FRANCISCO, CALIF.

Hughes' Washington Window.

Although the accompanying illustration gives a good idea of the principal window in H. R. Hughes' store at West Van Buren street, Chicago, which he arranged as a special attraction for Washington's birthday, it does not show the interested crowds that gathered around it all the time it was exhibited or the passing passengers on the surface cars, craning their necks to catch a view of the store as they pass. Hughes has the right idea in advertising all right; he makes himself and his store talked about, he interests the children who in turn interest their parents and he puts an amount of life into his business that is not usual to say the least. The store was thronged with people on Sunday and over 6,000 of his special Washington birthday cards were given away on that day. This is sowing the seed and he deserves to reap the harvest in business.



WASHINGTON WINDOW OF H. R. HUGHES, VAN BUREN ST. CHICAGO.

In the present window the youthful George is shown with his memorable hatchet, the cherry tree and his home at Mount Vernon, and the thing is carried out with an attention to truth in detail which characterizes all Mr. Hughes undertakes. At the left of the window shown, a room is fitted up in old style with oak furniture, old fashioned hearth and chimney breast and other fittings where customers may retire for writing or rest, a pleasant and comfortable retreat. The lighting effects in this store we have already referred to and in the present instance it is only necessary to say that the light has been used to heighten the illusion presented of an old style, old time room, and used successfully. We congratulate Mr. Hughes in his latest effort of the series that is making his name known all over the United States as a florist with up-to-date advertising ideas.

MENOMINEE, MICH.—Chas. Schulz has purchased property adjacent to his greenhouse plant, which he intends to enlarge in the near future.

ORANGE, N. J.—Thieves entered the store of Popken & Collins, 186 Main street, February 15, by crawling through a coal hole in the rear of the greenhouse and forcing the rear door of the office. Nothing was taken, as the thieves appear to have been frightened away before starting to work.

Hydrangeas for Easter.

I read with interest a well-written article on hydrangeas in the issue of February 13, signed "Commercial." I wish to add to this valuable article a few hints that have come under my observation the past six years in growing this valuable plant for Easter. We carry out the following instructions as near as possible to grow such specimens as the illustration given on page 119 of one of our hydrangea houses.

Between February 1 and March 15 we take cuttings from plants that are being forced for Easter. As soon as rooted they are potted in 2½-inch pots in some good light loamy soil with a sharp sprinkling of sand and placed in a light, airy house. As soon as the pots are well filled with roots they are shifted into 4-inch pots and placed in the same house. I might add that they receive their first and last topping June 1. Then they are ready to be shifted into their flowering pots or their last shift. For nice single plants we select the strongest plants and place them in 6 and 7-inch pots; for larger specimens we place 4 or 5 plants in a 10-inch pan. We can regulate the sizes that sell best in this way.

The plants are then placed in a frame with a full exposure to the sun, watering is carefully looked after, and by the middle of September they should be well enough along to gradually cease watering. We allow the plants to remain there until they have had one or two sharp frosts; then they are removed to a shed. Here they are allowed to rest until time for forcing.

Before bringing the plants in for forcing (last week in December for Easter) we remove quite a good deal of the old soil from the top of the pots and give each plant a dressing of well pulverized rotted cow manure. This gives them sufficient feed in the early stages of forcing. After the buds show we apply liquid manure water once a week until flowers show color, then this is withdrawn. We aim to have same well developed at least 10 days before Easter so they can be hardened off.

C. P. DUDLEY.

Parkersburg, W. Va.

Twin Flowered Narcissus Golden Spur.

The accompanying illustration is interesting showing as it does the very unusual feature of a twin-flowered Narcissus Golden Spur. Howcroft & Watkins, the well-known bulb merchants of London, Eng., who sent us the photograph from which the illustration was prepared, say they have never seen one before, though they handle large quantities of the bulbs annually. We do not remember seeing a twin-flowered scape of this variety either though, of course, it is not uncommon with some of the hybrid forms.

Notes on Dahlias.

Although most of the large dahlia growers have had their stock roots in the propagating bench for some time, yet the present is a good time to plant stock roots to get the best results. There is little gained by planting so early. It is true we get earlier plants, but we lose in the quality and the results; the cost of carrying the plants on in the proper way is also an item; the stock is now in much better shape to grow and will give not only better cuttings, but more of them, consequently they will root with less loss and make better plants. This does not apply so much to some varieties as to others.

The evil results of starting stock roots too soon is generally called over propagation, but should be called improper propagation. Where early plants must be had for shipping south, part of the stock should be planted early and then thrown out when it becomes weakened, depending on the later stock for the main crop. We are giving considerable stress to this point as we have seen so many failures resulting.

Another cause for failure is the lack of proper selection of stock. I will give a quotation from an article in one of the trade papers written by its regular correspondent after visiting a concern that grows dahlias largely: "Here is where the order clerk and the propagator can work in harmony as the small or undersized roots are equally as good for propagating." This is very erroneous, for two reasons. As every dahlia grower (and many others to their sorrow) know, there are two kinds of degeneration in dahlias. In one the plant grows more vigorously, taller and stronger in every way, but the flower comes semi-double. The root also is larger. In the other, the plant is dwarfed and smaller in every way, the flowers are more highly colored (like the peach when attacked by the yellows), much smaller, showing very little vigor, although coming perfectly double, and making very small roots. This latter is called dahlia disease and develops until the plants almost refuse to bloom at all.

It will therefore be seen that the greatest care should be taken to select the stock plants when growing, but if this is not done, be sure to select strong, vigorous medium-sized roots for propagating purposes. Some propagators use sand in the stock bench, some use garden soil, while others use a rich compost of ¼ to 1-3 rotted manure with a light application of pure raw bone meal. A temperature of 55° to 60°, with judicious watering, will insure strong cuttings with the greatest stamina, and the stock plants will not become exhausted so soon.

It is hardly necessary to dwell on the cutting bench, further than to say that almost any kind of sand will root dahlias, in a temperature of 60° to 65°. A higher temperature will root them more quickly, but the plants will be weaker, while a lower temperature will give stronger plants, but take longer. Do not over-water the stock bench; it will make the cuttings soft and more liable to wilt and damp off in the cutting bench. This is one of the most important points and causes the greatest number of failures.

L. K. PEACOCK.

Begonia Gloire de Lorraine.

Those who wish to work up a large stock of Begonia Gloire de Lorraine or any of the nearly related varieties can start right in now and keep it up as long as necessary. The earlier this species is propagated after the turn of the year the better if large showy plants are needed. Practically all growers now

A Twin Flowered Narcissus Golden Spur.

use leaf cuttings of this begonia. Stem cuttings are thought by some to be as good or even better, but we have always had the best results from leaves. Stem cuttings do not, according to our experience, produce plants of so good a habit; more stock plants are needed if this system is followed and, although at first the plants look larger they are no earlier than those produced from leaves.

Cleanliness throughout is of the utmost importance in the culture of B. Gloire de Lorraine and this is especially important at propagating time. If the cuttings are to be rooted in pots see that these are absolutely clean, dry and well drained before filling with sharp sand. If on the bench the same points will need attention. Although the cuttings must not be so loosely placed that the watering is apt to disturb them yet the sand need not be so firm as is necessary when propagating roses and carnations. In fact we have found it best to let the first watering settle the sand around the leaf cuttings leaving it, first of all, so loose that it sinks enough with the watering to come just above where the leaf stem joins the spreading portion of the leaf. The reason for this is, the roots at first are by no means strong and cannot push through hard layers of soil or sand.

Another dangerous period in the culture of this begonia is the time the plants are in their first pots. Here again the root action is not vigorous and it is not advisable to rush the plants into a quick growth. This slow period is most trying to beginners in its culture, but if they will keep the condition of the plants in mind and not overwater the roots or allow a scum to form on the surface they will come through all right. This first potting should take place as soon as the cuttings are well rooted and small pots should be used. The compost at this time should consist of a light loam, leaf mould and a liberal addition of sharp sand but no manure. Should the soil be very poor a light sprinkling of guano or fine bone meal may be given but nothing at all likely to sour can be allowed. A temperature of 60° by night is ample, running up with sun heat by day with air on but not pushing the fire heat. A constant circulation of air around the plants is a great help, at this stage, to keeping the foliage of good color and the plants sturdy which is of importance as it is at this time that the foundation is laid for a good plant or otherwise.

Light is essential all through the growing season and the nearer the plants are to the glass the better. But a light shading is necessary at all times when the weather is bright, after February, more, of course, after repotting than when the plants are well established. Light to a great extent helps the color of the foliage but sun takes it out. Growers need not be alarmed at the pale tint of the leaves early in the season; this seems natural to the plant and the leaves will take on a better color as the season advances provided the plants are properly treated. While it is not advisable to allow the plants to become potbound before repotting yet they should be allowed to feel their pots and a small shift only should be given, two shifts from what may be termed the stock size to the flowering size being better than one. The time of repotting will vary a little according to the time the cuttings were put in the sand, but the second potting should usually take place about May and the final shift into their flowering pots in August.

At both these pottings use a compost consisting of good fibry loam three parts and leaf mould and sand one part. For manure add one part in eight of well dried old cow manure broken up finely. The final potting should be more firm than the previous ones as the plants begin to grow with a will after the end of July and consequently the roots are better able to take care of themselves. During the whole growing season the plants must be kept well apart to produce well balanced specimens. From the time they are well established in their first pots until, say the end of September, the plants must be kept pinched, just the points of the shoots being taken. This prevents their flowering and forms a bushy well furnished specimen. After this a neat stake or two will be needed and the growth must be looped up to these, preferably with green tie though the first ties will be well hidden before the plants are finished. This plant is by no means a gross feeder and strong manures are not needed at any stage. But from the time they are well estab-

BEGONIA GLOIRE DE LORRAINE AT SAMEUL MURRAY'S, KANSAS CITY, MO.

lished in their flowering pots until they are finished, alternate waterings at intervals of a week with soot water and ordinary manure water will be of great assistance in rounding out a fine, well flowered plant.

Besides the ordinary market pot plants B. Gloire de Lorraine is excellent for growing in baskets, especially by private gardeners for conservatory decoration. Large or small plants may be grown with equal facility and success, it being only a matter of thoroughly draining the baskets and using sufficient plants. Very little in the way of support is necessary for basket plants. The foundation may be laid by pinching and supporting the plants say until the end of July after which they may be allowed practically their own way when they will droop around and quite hide the baskets. A made up basket plant say in a 30-inch basket, drooping all around and covered with the lovely pink flowers is about as fine a feature as can be mentioned during the dull days of November and December. The worst trouble with this plant as regards disease is a spot that appears in the leaves. By growing the plants in very moist houses and allowing little air this trouble is intensified, but if clean stock is used and ample light and air and plenty of room are given the plants very little trouble will be found in this way. Should any spotted leaves appear prick them off and take them out of the house and burn them at once to prevent the disease spreading. COMMERCIAL.

We have received the following interesting communication from Samuel Murray, Kansas City, Mo., upon whose place the fine plants of Begonia Gloire de Lorraine illustrated were grown:

"There has been a good deal said about Begonia Gloire de Lorraine in the trade papers the past year, and I do not think that I could say anything that would be new or interesting. I believe that the man who propagates the leaf cuttings and sends out first class, healthy little plants in May and June, has done the most and deserves the most credit. We buy all of our plants in 2-inch pots from leaf cuttings, and from the time we pot them in 3-inch pots, we never neglect them for one moment until they are sold, and have been fully repaid for all of the attention they were given.

"At first we use pure fresh leaf mould and sand, and at each repotting thereafter we make the compost a little heavier and richer. I attribute our success very largely to the keeping of the house pure, sweet and healthy, giving the plants all the light that they will stand, and plenty of room to develop, so that the fresh air can circulate all around them.

"Wm. Sharp, my grower, companion and friend for over 20 years, has no superior in watering and airing. We both love this begonia and take genuine pleasure in working side by side all summer, watching the plants that cost us 12 and 15 cents grow into specimens. Many of them are sold at Christmas for $10 to $15 each. Surely, it is worth the while. What is finer than a well done Lorraine and the supreme satisfaction of having done something well?"

"SAMUEL MURRAY."

Favorite Flowers of Famous People.

QUEEN ALEXANDRA LIKES ROSE HERMOSA.

Queen Alexandra's favorite rose is Hermosa, a beautiful and free-flowering kind which somewhat resembles the old monthly rose in habit, but is a much superior one in its larger and more substantial pink blooms, which flower profusely from June (the "month of roses") until Christmas. King Edward is also an admirer of Hermosa, and some 20,000 plants of this "Royal" rose adorn the policies at Sandringham.

SOLOMON A LOVER OF TREES.

Solomon had a passion for trees. Indeed, he is credited with being the first who had transplanted to the home soil those from other parts of the world. Judea in his day was famous for its balsam, the favorite plant of the queen of Sheba, and she, knowing Solomon's liking for transplanting, is said to have presented him with a root of it.

MOHAMMED'S FAVORITE FLOWER.

Mohammed declared the yellow daffodil, which grows abundantly throughout Western Asia, to be his favorite flower; and it is related that concerning it his counsel was:—"Whoever has two loaves of bread let him trade one for a blossom of daffodil; for bread is nourishment for the body, while the daffodil is food for the soul."

PORTLAND, ME.—The store of E. J. Harmon & Co., on Congress street, was badly damaged by fire February 15, the loss being about $300, fully covered by insurance.

PEOPLE WE KNOW.

C. E. Gullett.

C. E. Gullett, of Lincoln, who was elected president of the Illinois State Florists' Association at its annual meeting at Springfield, as reported in our last issue, is an enthusiastic florist and member of the firm of W. H. Gullett & Sons. His business is his hobby and he has given it close attention all his life. A better selection could not have been made and Mr. Gullett will fill the position with credit both to himself and the association that has thus honored him. He ranks among the most successful florists of the state and is one of Lincoln's most highly respected business men. He is at the head of one of the largest floral establishments to be found in the state, having greenhouses with over 80,000 square feet of glass, and which does a large business with both Chicago and St. Louis.

Geo. B. Franks.

Geo. B. Franks, the vice-president-elect of the Illinois State Florists' Association is a young and energetic business man with a life knowledge of the florists' trade, gained with his father, Thos. Franks, at Champaign, Ill., and the association has chosen wisely. In connection with the meeting of the association at Urbana, next year, it may be well to note that all florists visiting the University of Illinois at Urbana also visit Champaign and it will be well to keep in mind that this town will naturally undertake a good deal of the work in entertaining the visitors to that meeting and should receive due credit for the same. When the time comes Vice-president Franks will not be found wanting.

Our Experiment Station.

A paper read by H. B. Dorner at the annual meeting of the Illinois State Florists' Association at Springfield, February 16-17.

As a result of the appropriations of two years ago the experiment station has undertaken to carry out certain lines of work relating to floriculture. In order to do this so that all parts of the experiments are under perfect control the erection of some new greenhouses was necessary. During the last summer two houses and a service building were constructed. In erecting these the aim was to build model commercial houses, and as a result the state possesses houses second to none. The ground plan chosen is one which allows of expansion, and in fact all parts of the plant have been so designed that new houses can be added without changing or interfering with those already up. The plans call for a range of detached houses, with intervals of 14 feet between, extending east and west from a corridor or connecting house extending north and south. The service building, which also contains the heating plant, connects with the corridor house on the north. All houses can thus be reached from the service building without going outside.

GREENHOUSES.

The two houses already erected were designed to avoid shading as much as possible, and so are of the very lightest construction possible, commensurate with strength. Each house is 28x105 feet, thus making it possible to have four 100-foot benches, each four feet wide. All parts above the gutters are of clear cypress with sash bars of the type ordinarily used in greenhouse construction. The gutters are of the King pattern, made of channel iron, supported on posts of 2-inch iron pipes. Each post acts as a down spout and empties into a vitrified tile drain laid along the inside of the wall. Below the gutters, in the side walls, is 24 inches of glass.

C. E. Gullett, Lincoln, Ill.

President-Elect Illinois State Florists' Ass'n.

Ventilation is secured by two lines of interrupted sash operated by Foley ventilating machines.

The walls below the side lights are composed of concrete, but constructed differently to those usually built. The

Geo. B. Franks.

Vice-Pres Elect Illinois State Florists' Ass'n.

iron pipes supporting the gutters are set into concrete piers 12x18 inches, and extend well into the soil to secure a firm foundation. The walls themselves are formed of large concrete slabs, five inches thick reinforced with ⅜-inch iron rods, and fit in between the posts. Their ends rest on the concrete piers and are held in place by concrete pilasters eight inches square, built about the posts. The sill was anchored to this wall and the side rafters put into place. The benches are each 4x100 feet and five inches deep, and are built of pecky cypress, supported on 1-inch iron pipes. The walks between the benches are 28 inches wide, and those between the benches and walls are 22 inches wide. All walks are of cement.

SERVICE BUILDING.

The service building is a structure 26x100 feet, constructed of wood, with plaster finish on the outside. It is situated on the north side of the greenhouses with its longer axis parallel to the longer axis of the greenhouses. A space 16 feet wide was left between the service building and the greenhouses. One-half of this building is large enough to accommodate three 60 h. p. boilers. The concrete floor of this room is about two feet below the floor level of the greenhouses. The other half of the building is devoted to a large work room about 25 feet square, a hall way, an office 13x20 feet, a small laboratory, a small room and a lavatory. The work room contains a reinforced concrete floor, making it possible to scrub it out whenever necessary. Beneath this part of the building is a cellar divided into three rooms. Through the largest of these extend all the steam, water and sewer pipes. This makes an excellent room for storage. The other two rooms, which take up one-half of the cellar space, are used as cut flower and cool storage rooms.

HEATING PLANT.

The heating plant is somewhat different from that used in most places. At the present time power is secured from a 60-h. p. tubular boiler, the setting of which was designed to reduce the amount of smoke as much as possible. Draught is secured by a 70-foot brick stack designed to carry 180-h. p. if necessary. The heating system was constructed to be run either as a high or low pressure sytem. From the top of the boiler a 6-inch feed main drops down into the cellar to the pressure regulator and its accompanying by-pass. From here the main continues and passes under the cross house. At this place branches of 1½-inch pipe come off and passing through 6-inch tile emerge in the greenhouses under the benches and by the side walls.

Under the benches the 1½-inch pipe divides into two 1¼-inch pipes, one extending down each side of the bench. These pass down to the other end, cross over, and come back on the opposite. There are also two wall coils, one of which passes around the end to the door. This, then, gives four lines of pipe under each bench and four on each wall, or 24 pipes in all. Overhead pipes have been omitted altogether. Each flow and return is fitted with a regulating valve at the corridor end of the house, and each return, before it passes into the main return, is fitted with a check valve. The water is returned to the boiler by means of double Morehead traps, one situated in the cellar, and the other over the boiler. The greenhouses, as well as the service building, are furnished with water and electric light from the university plants.

EXPERIMENTS.

During the present winter these houses have been devoted to an experiment on carnations with chemical fertilizers supplementing stable manures. The object

of the experiment is to determine what chemical fertilizers used with manure are best for carnation growing. The results from this experiment will form the foundation for future work on the amount to use for best results. In this work eight benches, each 4x100 feet, were available. Each bench was divided into 16 sections, 4x6 feet, inside measurement. this leaving some three feet over, which was divided into two small sections, one at each end of the bench. The object of this was to have sections protecting the exposed ends of the experimental sections.

Two benches, with 32 sections in all, were used in each experiment, thus repeating the work four times. Each set of benches was planted to a different variety. The sections were numbered from 1 to 32, each number standing for a definite fertilizer combination. As a further precaution, the location of the numbers on the benches, in the various experiments, were changed so that each of the numbers appears at different places in the houses. Thus sections occurring at the exposed ends of the house also occur in the center and at the protected end. The varieties selected for the work were Enchantress, White Perfection, Beacon and Winsor, as representing a variety of characters, especially in growth of flowers and stems.

FERTILIZERS USED.

The fertilizers selected for the work were forms commonly used, and are easily procured. Dried blood, nitrate of soda and sulphate of ammonia for nitrogen; acid phosphate, raw rock phosphate and steamed bone for phosphorus, and potassium sulphate, kainit and wood ashes for the potassium. Ground limestone and ashes were also used to furnish lime. Sheep manure and well rotted stable manure were also used. In preparing the sections a definite amount of manure was added to each of the sections, excepting those used as checks. The chemical fertilizers were then weighed out and added and the whole thoroughly incorporated. All chemical fertilizers were applied in quantities to afford an equal amount of the element for which they were used.

All fertilizers were applied before planting with the exception of those containing nitrogen. Of these one-half of the dried blood was added at this time, and the remainder later. Of the nitrate of soda and sulphate of ammonia, only one-fifth was added before planting. The remainder was added later in four installments. In securing data records are being kept of all the flowers as to size, length of stem, condition of calyx, of the general character of the plants, temperature, water, etc. From this data and general observations the work for the following year will be planned.

CINERARIA MATADOR.—Among noteworthy new plants to be offered for the first time this season Cineraria Matador fills a want that has long been deplored by all in the market plant trade. It enriches the range of colors to be found in hybrid cinerarias by one entirely new, a bright, glistening, terra cotta red, free of the objectionable bluish, washy lilac cast that characterizes the flowers of all the older hybrids. This singularly captivating color, greatly heightened under artificial light, though it is its only distinction, very strongly pleads for it to those in search of meritorious novelties.

THE VIOLET.

THE new Boston violet is obtaining a high character among practical growers, owing to its great freedom of flowering.

Violet Baronne Rothschild.

The accompanying illustration gives a good idea of the fine new single violet being sent out this year by the F. W. Fletcher Co., of Auburndale, Mass., and Chas. H. Totty, Madison, N. J. It has a wonderful character as a free flowering variety of the California type, and is said to commence flowering earlier in the season, and go on later, than any other single, while it retains its exquisite fragrance for several days. In color it is like Princess, but a shade darker, and taken as a whole, there seems to be no other variety to compare with it as an all-round commercial violet.

G.

Notes in Season.

If proper attention has been given the plants thus far, the season of greatest care is past. If, however, ventilation and fumigation have been neglected the time of trouble is at hand. Plants at all infested with aphis must now be cleaned as in the weeks to come this pest increases very rapidly. If badly infested the only real remedy seems the hydrocyanic acid gas. Propagation of strong, healthy runners of the double varieties is now in order. For stock of the single varieties (except in case of new or scarce varieties) we prefer to wait until April and then take divisions from the old clumps, using only the new growth for the purpose.

There is always the task of picking off old and diseased leaves and occasionally stirring the surface of the bed. Unless the soil was very rich at the time of planting, it is well now to give occasional doses of liquid manure. Made from cow or sheep manure, it can do no harm, and in many cases is needed by the plants. Let chemicals alone—they have no place in violet culture—and I think the best growers do not use bone meal for violets. Bone certainly should not be used for this flower unless thoroughly incorporated with the soil several months before planting time.

For the next two months the problem of the grower is not how to produce more flowers, but how to market the avalanche sure to come. Here little advice can be given, as, unfortunately, there is no way of preventing a glut in the market during February and March if we are to grow plants enough to supply the demand from November 1 to February. Although the demand largely increases as spring approaches, the supply more than keeps up, and a period of very low prices and general dissatisfaction is bound to occur. A remedy adopted by some growers is to throw out a part of their plants, using the space for vegetables, bedding plants, or other crops. If generally adopted this might result in steadying the market and preventing the quotation of violets at $1 per 1,000 or less, that we have noted every season for several years. On the other hand, it is a question if the flowers produced in three months will pay the expense of caring for the plants from April until the following February. It is a point each grower must decide for himself.

That the violet does not hold the preeminent position with the ultra fashionable that it did a few years ago, is very evident. Fickle fashion has largely turned to the gardenia and the orchid. The sale of violets has undoubtedly largely increased in the last five years, but a careful analysis of the retail trade

NEW VIOLET BARONNE ROTHSCHILD.

will show that the increase comes, not from our richer patrons, but from the largely increasing numbers of middle class buyers, and in selling to this class price counts for a great deal.

In my opinion the remedy for the present condition lies, not in the building of mammoth houses to cheapen production, but rather in increased care and skill and the production of superlative quality. When a grower can offer better flowers, of improved varieties, of greater fragrance, of better color, or of novel character, then he may again interest his old-time patrons and the violet will come into its own again. Considerable work along the line of improving single varieties has been done in continental Europe during the past decade, and we purpose, shortly, giving a brief resumé of the results of this work. VIOLA.

Carnations in Cement Benches.

We present herewith an illustration of a house of Enchantress carnations at the establishment of the Geo. Wittbold Co.'s Edgebrook (Ill.) establishment. The cement benches have been used successfully for several years at this firm's

ENCHANTRESS CARNATIONS GROWING IN CEMENT BENCHES.

At the Geo. Wittbold Co's., Edgebrook, Ill.

Chicago place for the growing of plants, but last fall the benches shown in our view were erected and a trial made with carnations. So successful has been this venture that the same construction will be used throughout the carnation section. It would be extended, also, to the rose section, but for the question of drainage, a matter that is open for experimentation.

Easter Plants at Frank Oechslin's, Chicago.

During a recent hurried call at the fine establishment of Frank Oechslin, we found his Easter and spring stock looking well and his azaleas are in good shape, fine plants covered in buds, which are opening up readily. Primula obconica is largely grown. The plants are full of flower and of excellent color and varieties. Cyclamens are now being potted from the flats and are a healthy lot. Among forced shrubs we noted fine magnolias, rhododendrons, and other market varieties, some ready for market and others being retarded for Easter. The ferns are, as usual, in the best of condition, from the smallest seedlings to large specimens ready for sale. Cissus discolor is being tried out here as a basket plant, is very distinct, and should be a good seller. He has a large and healthy stock of palms, rubbers and other green foliage plants, as well as remarkably fine batches of rambler and tea roses. The condition of the whole place reflects great credit upon the growers and everyone else concerned.

CHRYSANTHEMUMS

Propagation.

In our last article on this subject attention was called to the importance of air and water in this work. The amount of ventilation given will depend on the outside temperature and the radiation within. It is also true that conditions should govern the water supply. Any thoughtful person knows that there is a wide range in the evaporation, between those rooted without bottom heat and where 60° are maintained. Concrete and tile benches lose the moisture by evaporation faster than those constructed with lumber, and there is a marked difference in this respect between sunny and rainy days.

If the conditions are such that the tops of the cuttings dry off in a few hours, there need be no fear of surplus moisture in the sand, for it is this moisture that sustains the cuttings until rooted, and conditions approaching dryness tend to defeat the operation. There are times when continued severe weather prevents ventilation, that watering should be deferred for some days. And the same rule would apply to prolonged rainy spells.

The dewing over with a fine, mist-like spray is often very beneficial in warm weather, but should be, as a rule, avoided during the winter. Many of the cuttings put in the sand two weeks ago are now in the best condition for potting. It is unwise to allow them to remain in the bench too long, as they are easier to pot and respond better if handled when the roots are about one-half inch in length. It is not, of course, important that the roots be just so far advanced; in fact some kinds will be longer than others, but allowing them to remain until they are three to four inches long is wrong. When the cuttings are ready to handle they may be either potted, pricked out in flats or planted upon the bench for later propagation. Those potted can be repotted as soon as the roots appear through the soil and thus grown on for specimen plants or for benching. Those put into flats make excellent plants for benching, or may be used for stock from which to take cuttings.

The soil for flats and benches where the cuttings are to be taken, is best if rather light and rich as the plants respond more quickly than where heavy soil is used. Whichever method is adopted for establishing the cuttings, see to it the first watering is thorough so that all parts of the soil are wet. Dry feet may be good for we mortals, but it certainly is not for this class of plants. Cutting bench fungus must be guarded against by ample ventilation. This fungus appears like mold on the surface of the sand and increases rapidly under favorable conditions, causing the cutting to decay or slough off. It will attack them after they are rooted and literally mow the cuttings down above the sand. There is another disease but I am not certain it is a fungus. It is first apparent in four to eight days after the cuttings have been inserted, when it will be noticed some have toppled over. Upon examination it will be found the stem has decayed and turned black and so soft the top falls upon the sand. Taking out other cuttings it will be noticed this process of decay begins at the bottom and works upward. It is our belief this is due to foul sand which contains some poisonous matter which is absorbed by the cutting. The best remedy is fresh sand. It may be possible to destroy this poison and thus sweeten the sand by applying a solution of sulphate of copper. This could be most effectively applied when the bench was free of cuttings, and if the solution is hot and administered copiously, so much the better.

ELMER D. SMITH.

OBITUARY.

Eugene Germain.

Eugene Germain, president of the Germain Seed & Plant Co., Los Angeles, Calif., and a pioneer citizen, passed away unexpectedly February 18 after a very short illness, death being ascribed to heart failure. The sudden death of Mr. Germain came as a shock to his many social and business friends. He has been prominently connected for many years in Los Angeles, and was allied with many interests in southern California.

Mr. Germain came to California in 1870, and reached Los Angeles with a blanket on his back and entirely penniless. Two years previously he had arrived in New York from Switzerland, his birthplace, at the age of 21, but his success in life began from the moment he came west. His first business venture was operating supply stores along the line of the Southern Pacific, which was then just building across Arizona and New Mexico. His brother-in-law, Henry H. Baer, was associated with him at this time. He continued in the supply business for about five years but the real foundation to his fortune was laid in 1882, when he centered his attention on southern California, and started the Germain Fruit Co. This venture met with such success that it was reorganized in 1884, and since that time, he had remained at its head. Mr. Germain was instrumental in lowering the fruit rates to the east, and was always interested

*The rule governing sports of existing varieties is that they must be submitted to three of the five committees, the average of the three scores to regulate title to a certificate. The varieties Improved Chadwick and Yellow sport J. A. Miller having been submitted to only one committee each are therefore not entitled to a certificate.

CHAS. W. JOHNSON, Sec'y.

in anything that pertained to the fruit business.

He was twice president of the Los Angeles board of trade, and helped place that organization on the firm basis upon which it now stands. He also served as president of the Stock and Produce exchange of Los Angeles, now the Produce exchange. In 1889 he was appointed by the governor as California commissioner to the Paris centennial exposition. He was also appointed as consul to Zurich, Switzerland, under the administration of President Cleveland.

During the past few years, he had devoted most of his time and attention to his growing interests in southern California. Besides the mammoth seed store, he was owner of the Germain building and of the Hotel Germain. Mr. Germain was born on November 30, 1847, and was 61 years old at the time of his death. He was a thirty-second degree mason, and also a Shriner and an Odd Fellow. He was at his office the week before his death, and went to the beach on a little pleasure trip on the previous Sunday. The following day he was feeling ill, and from that time on was attended by a nurse. He died very suddenly, and without the knowledge of the other occupants of the room. He leaves an estate valued at nearly $2,000,000, mostly in real estate, and his entire property lies in the west, where his fortune was built up. The funeral will be held as soon as his wife arrives from Zurich, and also his sons from the east. At present, the members of his immediate family are all east or in Europe. The business will continue along the same lines as before under the management of Fred H. Hunter who has acted in that capacity the past six years.

PACIFIC.

Charles Bramley, Sr.

Charles Bramley, Sr., one of the oldest business men of Cleveland, O., died at his home there February 17. His wife, who had been at his side through the 50 years of active business life, survives, with her nine children. Their golden wedding was to have been celebrated on Monday, February 22, 1909. Invitations had been sent to their many relatives and friends, about 500 in all, Mr. Bramley taking a great interest in all the preparations.

Mr. Bramley was an early settler in Cleveland, having lived on East Seventy-first street, his present address, since

The Late Charles Bramley.

1855. He engaged in market gardening until 1894, when he and his son, William A., started in the florist business, under the name of Chas. Bramley & Son. They started in with two small 50-foot houses and through the careful and good business qualities of deceased and his honest dealings, they gradually increased the amount of glass until at the time of his retirement they had one of the largest retail greenhouses in the city.

In May, 1908, he had a stroke of apoplexy, and has not been in as good health since, although he was always able to be about, being confined to bed only two days before he died. Mr. Bramley retired from the firm in August, 1908, his interest being purchased by the son, William, who has conducted the business since under the name of Bramley & Son. The funeral was held February 20, services at his residence. The remains were placed in a vault at Lake View cemetery. He is mourned by a host of relatives and friends. The flowers were beautiful, and many and were much appreciated by the family.

FORESTER.

George A. Dickson.

We greatly regret to learn, through the English trade papers, of the death of George A. Dickson, head of the firm of Dicksons, Chester. Death occurred at Springfield, Newton, Chester, February 6. Mr. Dickson, who was 74 years of age, occupied such a high position in the world of horticulture that he was selected as one of the first 60 to receive the Victoria medal of honor in horticulture. For a very large number of years, indeed ever since the amalgamation of the two Dickson firms into Dicksons', Ltd., he was at the head of the business. He took a great interest in civic matters, was mayor of Chester in 1886, and received the honorary freedom of the city on the occasion of the diamond jubilee celebration.

FORT THOMAS, KY.—Chris Stump, employed by Julius Ernsterhof, suffered a stroke of apoplexy at the home of the latter on Alexandria pike, February 15. He was removed to Speers hospital and died next day. The deceased was 58 years of age and leaves a widow and two adult sons.

CHICAGO.—There was every prospect of the promised blizzard materializing February 24, the wind being high all day with occasional snow flurries.

IONOPSIDIUM ACAULE is a pretty dwarf flowering plant, nearly related to the wallflower. The leaves are very small, and from the axil of each springs a flower, resulting in a tuft of pale lilac. The plant is easily raised from seed, and flowers are produced in a very short time, making it a fine subject for filling up the front of borders after bulbous flowers are past. It may also be grown in pots, and flowers freely inside.

RICHMOND (Wayne County), Ind., has refused to "go dry" on a recent vote. Is it possible that Richmond plans to invite the S. A. F. soon?

"WHY cannot our florists combine like milliners and force a fashion?" asks a British trade paper referring to the lack of interest in St. Valentine's day in England.

MANURE may often be had cheaply or for nothing between seasons, and if a cemented bottom to the pile to catch the drainings is constructed it may be stored without any waste.

RIVIERA carnation growers, it is said, graft many of their plants on Gypsophila paniculata as a means of enabling the stems to resist strong sun heat as well as accidental overwatering.

N. E. HANSON, who for eight months has been traveling through Russia, Central Asia and northern Africa for the government, has returned with, it is said, a valuable collection of seeds and plants as the result of his journey.

"GOOD ROADS" is a live, economic topic and its importance is freely acknowledged. Why do not growers and nurserymen note the importance of keeping the roads and walks about their places in such order that visitors are attracted rather than repelled?

STEAM turned into a propagating box or bench, or into the beds where crops are to be planted before the soil is put in, forms a very simple yet effective method of sterilization that can be used by all who have a steam heating plant or power with practically no expense.

MILD spells during winter, such as we are now passing through in the middle west with no sun, and a heavy, moist atmosphere, cause a soft, unsatisfactory growth in indoor stock. Full air on and a little heat in the pipes to keep the atmosphere moving is the best treatment. Close houses make matters worse.

Yield From Roses and Carnations.

ED. AMERICAN FLORIST:—

I see you quote me as having said that the yield from roses is $1 per square foot ground area, and for carnations 50 cents per square foot. You must have misunderstood my statement. What I said was that the yield from roses was $1 per plant, not square foot, and from carnations, 50 cents per plant. This figures out practically 50 cents per square foot of area, giving about the same return for roses as for carnations, as two carnations to one rose are benched in the same space; for instance, a house that will hold 8,000 roses will contain 16,000 carnations, making the returns from same about $8,000 for approximately 16,000 square feet, making it 50 cents per plant for carnations and $1 per plant for roses. As your note may mislead, I correct it.

F. R. PIERSON.

The American Rose Society.

The atmosphere having been cleared of the carnation by the precipitation which took place at Cincinnati, the queen of flowers now occupies the center of the stage, and we look forward to a record breaking display at Buffalo on St. Patrick's day. The broadening out of the exhibition, as indicated by the premium list, should insure a most varied and attractive display and one worth a long journey to see. Are our nurserymen awake to the many advantages offered by such gatherings? Here is an excellent opportunity for the display that will be given careful examination by men who are large buyers of stock, and who are ready and anxious to take hold of a good thing. It is to be hoped that growers of pot grown plants of the older as well as of the newer varieties of roses will come to the front. The many new candidates for public favor in the way of forcing roses should be well represented, and a suitable display of well grown flowers should prove a liberal education to many of us.

And then think of the names! It has long been the fashion to felicitate botanists on the jaw-breaking names employed by them, but they evidently have no monopoly, as witness: "Tausendschon" "Sneewitchen" or even "Magna-frano" and others which are beyond the capacity of my typewriter. Bring them on—names and all, and let us have a big show. The meeting rooms are most attractive and the local members of the society will do all in their power to make everything agreeable.

JOHN F. COWELL.

Seedling Roses.

ED. AMERICAN FLORIST:—

In regard to "J. R. G.'s" query in the issue of January 30, page 15, asking if seedling roses have ever been grown in New Orleans, would say that many have been grown here. I have grown quite a few worthy ones but for some reason or other have never disseminated them. Teas, hybrid teas, Bourbon and noisette, they would all, as far as I can remember, bloom the first season, in fact, when quite small; three or four inches in many individuals. "J. R. G." does not state to what class his seedlings belong. If in any of the above classes I would do as E. G. Hill says—bud them using any of the Lady Banks stocks as an experience of many years has proven this to be the only one for this immediate section.

RICHARD ORY.

Plants for Mississippi.

ED. AMERICAN FLORIST:—

Please state what flowers, other than roses and carnations, can be grown outdoors along the Mississippi coast to afford commercial cut flowers. Please give such a selection as will cover the entire season.

X. Y. Z.

Pansies, violets, jonquils, daffodils, narcissus, hyacinths, tulips, Cape jasmine, gladioli, tuberoses, dahlias and chrysanthemums.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—In a greenhouse where I can learn the florist trade; young man, 19; Iowa or Illinois preferred. Address
Key 792, care American Florist.

Situation Wanted—By a single man, 32 years old, 15 years' experience, to take charge of small place; can grow roses, carnations and pot plants; state wages. Address
Key 778, care American Florist.

Situation Wanted—As assistant on first-class commercial or private place; single aged 23; eight years' experience; best of references; near Chicago preferred. Address
Key 791 care American Florist.

Situation Wanted—As gardener; have had 13 years' experience in the large gardens of Germany Russia, Belgium, Asia, Holland and Turkey and can give references. Address
Key 782, care American Florist.

Situation Wanted—A young all-'round general greenhouse man, with 8 years' experience wishes a position near Chigago; ready for engagement on the 5th of March; state wages in first letter.
Key 785, care American Florist.

Situation Wanted—By an experienced florist and gardener on or before April first; private or commercial; private preferred; best of references; please state salary in first letter.
Key 800, care American Florist.

Situation Wanted—By a young man of 19 with experience in greenhouse a helper; near Philadelphia or New York preferred. Address
CHAS. DUMKE, JR.,
Manahawkin, Ocean Co., N. J.

Situation Wanted—A young all around general greenhouse man wishes a position near Chicago; eight years' experience; ready for engagement the 5th of March; state wages first letter.
J. HANLON, Highland Park P. O., Mich.
in care of T. Gowanlock, R. F. D.

Situation Wanted—As working foreman or grower; thoroughly understands growing roses, carnations, 'mums, bulbs and a general line of pot plants; life experience in all branches of the business; middle age, single; good references given. Address Key 794 care American Florist.

Situation Wanted—By first-class man for private place near Chicago; understands the growing of carnations roses, chrysanthemums, violets etc; no objection to commercial place; 13 years' experience in first-class places (English). Please state full particulars. Address
Key 761, care American Florist.

Situation Wanted—By thoroughly experienced gardener, to take charge of gentleman's place; 20 years' experience in all branches, including landscaping, vegetables, fruits and the growing of cut flowers and a general line of pot plants, outdoors and under glass; best references; age 36; married. Key 793, care American Florist.

Situation Wanted—Working foreman and manager German single hustler and steady; 22 years practical experience both eastern and western in roses, carnations, 'mums, fancy pot and bedding plants, palms, ferns, designing landscape and all odds and ends for a first-class retail store; first-class references; please state wages and full particulars. Key 798, care American Florist.

Help Wanted—Gardener, one familiar with orchids preferred. Address
Key 797, care American Florist.

Help Wanted—A gardener for out door work, single, sober and a good worker. Address
Key 786, care American Florist.

Help Wanted—An experienced first-class gardener, to take charge of a country estate, give name and address of last employer.
Key 802, care American Florist.

Help Wanted—A married man (preferred) sober honest and industrious with some knowledge of greenhouse work; state age, experience and wages wanted. GOSHEN FLORAL CO., Goshen, Ind.

Help Wanted—A thoroughly competent, reliable and experienced man, to fill position in retail store in Los Angeles. Apply to
WRIGHT'S FLOWER SHOP,
224 W 4th St., Los Angeles, Calif.

Help Wanted—First-class market gardener; one accustomed to growing vegetables in greenhouses and hotbeds. None but first-class man need apply. Address, with references.
Key 747, care American Florist.

Help Wanted—A good designer and decorator; must be experienced and able to give references from past employers and be sober and industrious. None other need apply. Address
Key 795, care American Florist.

Help Wanted—Energetic man as working foreman for landscape work; must be experienced in hardy plants, grading, pruning, etc., and capable of handling men to best advantage; state references and salary required. Address
Key 788, care American Florist.

Wanted to Lease—With privelege of buying, small range of greenhouses in good repair; Indiana or Ohio. Address
Key 787, care American Florist.

For Sale—Greenhouse property, 12,000 feet of glass one large 9 room house, one 6 room house, large barn, 6 acres of good land; established 36 years; good business; situated in Mass.; $4,000 cash. Key 801, care American Florist.

For Sale—In central northern state an old established florist business over 15,000 ft. glass well stocked, about ten acres land, $2,500.00 down ballance on time to suit purchaser.
Key 799, care American Florist.

For Sale—Greenhouses in good condition 3 houses 17x70 a good 10 room house good sized barn 1 acre of the best carnation soil, population 4,000 no competition, steam heat city water in city limits a fine chance for some one. Address,
A. RICHTER, Sturgis, Mich.

For Sale—Three houses, 100 ft., Moninger; three houses 75 ft., Deitsch, open; three houses, 34 ft., Deitsch, open; 1 house, 36 ft., closed. Eight-room residence adjoining plant; boiler and coal bins in basement. House and plant all piped and heated by steam. Store, 18x20; ice boxes, cash register, counters and other fixtures. Barn, 18x24. This plant is situated on corner lots, 150x150. Planting ground, 75x100. Located in an excellent city on the east coast of Lake Michigan, and plant is centrally located near churches and business district and in residence section. The store combines the plant, adjoining the same. For particu'ars address
Key 790, care American Florist.

TO LEASE.

Established florists' business in a thriving southern city; 60,000 ft. of glass sale for everything you can grow, house well stocked with roses, carnations, lilaes, orchids, ferns, palms, etc., which will be sold at a reasonable figure; large plot now under cultivation suitable for truck gardening, also six-room dwelling adjoining same; best of reasons for wishing to lease at a low price. Address
Key 773, care American Florist.

WANTED

Position as head gardener or superintendent, by thoroughly practical, active, energetic man; up to date in growing plants, flowers and vegetables under glass; ornamental planting care of trees, shrubs and hardy plants, and the developement and improvement of public and private grounds; Scotchman, 48 years of age, married, no children; please state salary and other particulars in first letter. Superior Machine & Boiler Works,
125-133 W. Superior St. CHICAGO, ILL.

Advertisements should be mailed so as to reach us not later than **Tuesday** of the week in which they are intended to appear.

San Francisco.

BUSINESS BETTER.

Since last writing, trade has been improving some, as there have been quite a few social events. Some of these affairs called for very elaborate decorations. As flowers are quite plentiful, prices are low for most kinds of stock. The show windows of the stores are all bright with yellow narcissi, which are being brought in, in enormous quantities and can be bought at very low prices. Tulips, Dutch hyacinths and other bulbous flowers also help to make the windows look gay. The continuous rainy weather is keeping back wild flowers and the early fruit blossoms, but as soon as we have a few warm days, these will be coming in and make the hearts of our numerous lady decorators glad, as they will then have plenty of choice flowers for their artistic work. The condition of the weather has been anything but favorable to business, for since January 1 it has been raining almost every day. A great deal of valley land is under water and it will be impossible for the farmers to put in a crop this season. Of course the greater part of the state is being benefitted by the bountiful rain as a wet winter always insures a large crop.

NOTES.

John McLaren, superintendent of the Golden Gate park, presented the society with a handsome volume entitled, "Gardening in California," of which he is the author. This book is filling a long felt want in California, as it is dealing entirely with conditions popular to our climate, etc., and nothing like it has ever been published before. Its simplicity and brevity make it easily understood by amateur as well as profesional gardeners. It has been well received and is finding a large sale, although it has been out only a few weeks.

The Pacific Coast Horticultural Society held its monthly meeting last Saturday. Although it had been raining all day, quite a number of the members were present. Quite a warm discussion resulted in regard to holding a spring or fall flower show. It was decided to hold a fall show and a committee was appointed to take immediate steps towards getting out premium lists and do other preliminary work. Dan McRorie, formerly of South Orange, N. J., was initiated a new member.

The Los Gatos board of trade will hold a great floral carnival at Los Gatos on May 1 which is to surpass anything ever held in this state. There will also be a flower show in connection with this, at which attractive prizes will be offered, to induce the growers, and private gardeners to do their best.

Julius Eppstein has one of the finest hotel flower stands in the country. It is in the St. Francis hotel annex and no money has been spared in making it harmonize with the rest of this beautiful hotel. P. G. Murray, formerly of Los Angeles, is in charge of this stand.

The Eureka Floral Co., 4092 Eighteenth street, has closed its doors. The former manager, F. H. Forrest, together with G. D. Munroe have established themselves as floral decorators at 271 Eureka street.

Henry Maier, superintendent of the Stockdale Nursery and Wm. E. Tevis' estate at Burlingame, is very busy with landscape work in San Mateo and vicinity.

A retail store has been opened at 508 Valencia street by Messrs. Firenzi, Parodi and Lombardi, under the name of the Valencia Floral Co.

J. Beatty, who has had charge of D. O. Mills' estate at Millbrae for the last 10 years has left—Maclane of San Mateo is in charge now.

The Art Floral Co., 792 Van Ness avenue, will move down-town March 1 and will be located in a new building, 239 Post street.

The Sutter Street Floral Co., Joe Goldstone, manager, has gone out of business. P.

Davenport, Ia.

The monthly meeting of the Tri-City Florists' Club was held at the home of Henry Gaethje, Sr., South Rock Island, Ill., on the evening of February 11, a goodly number of members being in attendance. President Wm. Kness presided The subject for the evening's discussion was, "Does it Pay the Average Florist to Invest in the New Varieties of Carnations and Roses the Year they are Introduced." All members were of the opinion that it does not pay. The banquet committee reported that the date set for the annual banquet was March 25, the place, Outing club this city, and that the wives and sweethearts be invited to attend. A dance and entertainment is to follow the banquet. The report was accepted and committee given power to proceed with arrangements. The nominating committee announced the following nominations of officers, the election to take place at the next regular meeting to be held March 18: Emil O. Boehm of Davenport, for president; John Staack, Moline, vice-president; Henry Meyer, Rock Island, vice-president; Henry Pauli, Davenport, vice-president; Wm. Knees, Moline, treasurer; John Temple, Davenport, secretary; Theo. Ewoldt, Davenport, financial secretary; executive committee, A. Anderson, Moline, Ludwig Stapp, Rock Island.

After adjournment, the club was invited into the dining room where a fine luncheon was in waiting, after which a social hour was enjoyed. Mr. Gaethje favored the club with a vocal solo, and Henry Meyer entertained with selections on the piano.

A communication from Adolph Arp, formerly superintendent of the parks, and subsequently with the Davenport Nursery Co., was received at the meeting. Mr. Arp is now superintendent of parks at Meridian, Miss. He has been there for about four months, and his family will follow in the near future. Mr. Arp sent in his resignation to the Tri-City Florists' Club which was not accepted, he being elected an honorary member of the club.

On account of the military ball to be given by the military rank of Odd Fellows in Moline, March 11, the next meeting of the club will be held on March 18. A large number of the florists are members of the I. O. O. F. T. E.

PASADENA, CALIF.—The Gardener's Association has selected April 1, 2 and 3 as the dates for the annual spring flower show. Judging from the abundance of rain and the luxurious growth of all plants and flowers, the show will equal the fall exhibition, which was the best held in the city. It is probable the site on Green street, between Fair Oaks and Raymond avenue, will be the scene of the exhibition.

St. Louis.

DEMAND GOOD.

The past week has been a profitable one to the growers. There has been a good demand which has at times caused a shortage. Carnations are quoted at 3-4 cents and are cleaned out daily. Roses are quoted at 4-10 cents and there are but few left over. Sweet peas are arriving more freely and are improving in quality. American Beauty roses are scarce and many of the short stemmed flowers arrive but are old and of very poor color. Violets are cheaper. There has been a good demand for Asparagus plumosus. A. Sprengeri and smilax Wild smilax has been extensively used in decorations. In the windows are shown jonquils, tulips and other bulbous flowers in pots and boxes.

NOTES.

Miss Alice Scott, for 17 years with Young & Sons, ribbon buyer and one of the chief clerks had to resign her position on account of nervous prostration and has gone to Pass Christian, Miss., for a rest of a few months. She will spend the summer at Atlantic City, N. J.

Ostertag Bros. had the decorations at the Coliseum during the automobile show week. Henry Ostertag held a cheque of $43.50 from M. D. Fortner, real estate agent, who is wanted here in connection with the forgery of a cheque for $12,500 on which he raised $11,600 in cash.

Professor Wm. Trelease addressed the chamber of commerce of Springfield, Ill., at a banquet given by that body to the State Academy of Science on the world's traffic in plants and their products.

Hugo Gross, one of our more successful violet growers, is now bringing in some very fine fancy sweet peas. Mr. Gross seems to have solved the soil problem.

It is expected that the Louisiana Purchase Co. will erect a monster statue of Jefferson on the site of the government building at the world's fair grounds.

Chicago.

MARDI GRAS HELPED TRADE.

Last week was Mardi Gras week, and as usual New Orleans was the principal center toward which the wholesale cut flower dealers turned their eyes, but there was also a very strong demand from all other southern points, notably Birmingham and Montgomery in Alabama, and Dallas, Austin, etc., in Texas. In addition to this there was in many northern states an aftermath of the Lincoln centennial celebration as well as the usual demand for Washington's birthday which coming on Monday of this week created a better Friday and Saturday shipping trade than usual. At the same time there was a larger supply of stock on hand than had been the case for some weeks previous and no very notable shortages developed. American Beauty roses are coming in more freely and these roses are now in good supply. Bride and Bridesmaid are of excellent quality. Beginning with Tuesday of the present week, prices dropped considerably, varying from 10 to 15 per cent from those of Mardi Gras week. Good carnations also are plentiful and prices easier. Bulbous flowers are coming in great quantities with a falling market to be reckoned with. Violets last week were considered good property, but the supply was large enough to keep prices from going up much. Sweet peas also sold well the quality being unusually excellent this season with flowers and stems surpassing anything previously seen on this market.

ERNEST OECHSLIN SHOT.

On Sunday morning at 10 o'clock, Ernest Oechslin, of Oak Park, was shot through the right lung by the accidental discharge of a gun in the hands of his nephew with whom he was talking at the time. A hasty examination showed the serious character of the wound and the stricken man was hurried to the Oak Park hospital where a more thorough examination was made and the bullet located by means of the X-rays. Mr. Oechslin is very low, but it is hoped that he will rally sufficiently to allow the bullet to be extracted. An improvement in his condition was noted on Wednesday.

NOTES.

C. S. Griffith, 160 North avenue, had a very effective red, white and blue window for Washington's birthday. A large wreath of red carnations formed the background, with a vase of red carnations in the foreground bearing two American flags, contrasting well with hyacinths, lily of the valley, tulip, etc., for white and purple lilac, purple hyacinths and violets suggesting the blue. The window proved a great attraction for a great number of north siders.

Adolph E. Benesh, of Winterson's Seed Store was married on Monday last at 9 a. m. In the evening at his home, 486 West Eighteenth street, a reception was given attended by several of the local trade.

Ernst Wienhoeber and H. N. Bruns leave this week, Thursday, for the east, intending to visit Cincinnati, Pittsburg, New York and other floricultural centers. They intend to be gone about 10 days.

The Kennicott Bros. Co. were showing some of the finest White Lawson carnations we have seen on this market.

21 Wabash Avenue, CHICAGO.

E. E. Pieser says business has kept up unusually well so far this season.

Sinner Bros. are now cutting fine Bride and Bridesmaid roses, also an excellent line of carnations including Enchantress, White Enchantress, Victory and Lawson.

Elsewhere in this issue we show an illustration of Enchantress carnations showing the thrifty condition of carnation plants growing in Wittbold cement benches.

F. R. Hills, who moved to California about a year ago on account of his wife's poor health, is making a determined effort to sell his Maywood home and greenhouses.

The E. F. Winterson Co. is showing Fritz Bahr's new carnation, Lucille, one of the finest novelties of this season's introduction.

Bassett & Washburn are still cutting heavily of Formosa lilies. C. L. Washburn will celebrate his fifty-first birthday February 27.

The J. B. Deamud Co. will celebrate on March 1 the third anniversary of that firm's incorporation.

Some of the finest sweet peas seen on this market were shown at E. C. Amling's this week.

Weiland & Risch are showing a strong line of Bride, Bridesmaid, Richmond and Killarney roses.

Fine American Beauty roses are a strong feature with Geo. Reinberg.

Visitors: W. H. Siebrecht and —— Struck, New York; Harry Fisher, Kalamazoo, Mich.; Thos. F. Brown, Greenfield, Mich.; —— Poague, of Courtland & Poague, Cincinnati, O.; W. S. Hizer, Rockford; J. M. Cole, Peoria.

TRADE FAIR.

The business of the past week was very fair. There was an increasing supply of all stocks, but as a rule everything cleaned up fairly well. American Beauty roses are more plentiful and specials were down to 60 cents, the last of the week. Tea roses are also in greater supply with lowering prices. The same may be said of carnations. However, as previously stated, there is no glut and conditions are more encouraging than they have been for some time. It is probable that the nearest approach to a surplus is in yellow narcissi, which are now very plentiful, with no extraordinary demand. In fact, the demand, so far as the flower-buying public is concerned, is not at all heavy; the saving clause has been a very moderate supply of stock, which prevented the demoralization of prices.

February 22.—The fact of this being a holiday seems to have a depressing effect on the market. There is a plentiful supply of stock but it moves slowly. Many persons left the city on Saturday to remain away until tonight, this being shown by a falling off in Saturday's trade. The weather is clear and mild and the feeling is that good prices have gone glimmering until Easter.

NOTES.

Henry Pritchard and wife of Bartow street, Astoria, L. I., celebrated the forty-fourth anniversary of their marriage on February 14, St. Valentine's day. There was a very large gathering of relatives and friends at their Astoria home, noteworthy being 23 grandchildren. Everything was abundantly provided to make the celebration an enjoyable event. Both Mr. and Mrs. Pritchard are 64 years old but healthy and rugged and we hope they may enjoy many more years of connubial bliss. Mr. Pritchard is one of the oldest growers of the Long Island section of this city, coming here from England in 1875. He is well known to all who frequent the New York Cut Flower Exchange. A son, Arthur, is manager for the retail firm of Christatos & Koster, 706 Madison avenue.

The dinner committee of the Florists' Club is predicting that the annual dinner at Shanley's February 27, will be a record-breaking event in club dinners. An attendance of over 200 persons is expected. It is said that the Boston flower show will claim a few enthusiasts while others will attend the dinner and take the midnight train for Boston. President Hallock's reception will be a most interesting feature of the programme. Several business concerns have made very liberal purchases of tickets and the menu is one of Shanley's finest productions and altogether, it is bound to be a rousing time.

Reed & Keller's latest introductions are a bouquet holder and a Florentine pot-cover. The bouquet holder is of white satin, on a wire frame, made to conform to the shape of the bouquet, the satin having a border of white lace. It is a convenient and handsome arrangement. The pot-cover, a neat and ornamental affair, is a combination of wood and paper, being both light and strong. It is a decided innovation and will doubtless become popular.

Carl Jurgens of Newport, R. I., sailed on February 19 for a tour of Europe. He is expected to be absent several months and will visit all the principal points of interest. While in this city he called on his old friends John Young and John I. Raynor.

J. G. Leikens has been very busy this month with wedding decorations, having had five during the first half of the month. He has also had a large number of dinner decorations, of which he makes a specialty.

A new retail concern, named the Waldorf Floral Co., has opened a store at 15 East Thirty-fourth street. Chas. Willon, formerly with M. A. Bowe, is manager.

The sympathy of the trade is extended to Patrick Devie, buyer for W. P. Sears, 729 Sixth avenue, whose wife died suddenly a short time ago.

Chas. A. Small, who spent the greater part of last week in Washington, D. C., called there by the death of his father, has returned home.

Patrick Welch of Boston, Mass., came over on February 23 to look into various horticultural matters in which he is interested.

Visitors: L. E. Wood of Wood Bros., Fishkill; Carl Jurgens, Newport, R. I.

Buffalo.

TRADE VARIABLE.

Trade conditions are variable and stock plentiful, especially in bulbous flowers. Weddings and receptions have not been plentiful, possibly owing to the close proximity of Lent when society has to quiet down. S. A. Anderson had a decoration for a quiet home wedding last week which was about as good as could be had and all work done by the family. Palms, lilies, lilac, Bon Silene and Killarney roses and lily of the valley by the hundred were finely arranged as well as many good plants.

J. Benson and Fred. H. Stafford, both formerly with W. J. Palmer and the former for the past two years with Stumpp of New York, have leased a store on upper Main street and we trust they will have every success in their new venture; both are popular and should succeed.

Don't forget that the Rose Society meets in this city next month.

Visitors: R. J. Irwin of Skidelsky & Irwin, Philadelphia, Pa.; Henry Bunyard of New York. BISON.

Baltimore.

TRADE GOOD.

A great variety of weather has been the portion of this territory lately, conditions not propitious for first class flowers. Trade continues fairly active, carnations being more plentiful, except white, which are still somewhat shy of supply. Roses are not abundant and not extra as to quality. Violets are a glut, and sweet peas were almost as abundant. The first southern jonquils are coming in, and as soon as shipments make their usual proportions home-grown stock will be unfavorably affected. The beginning of the Lenten season will diminish the requirements for social uses of flowers and decorations, but the usual succession of small affairs, receptions, teas, etc., will probably keep business about on a level. On the night of February 22, there was a ball of the Fifth regiment of the Maryland national guard at its armory, the decorations being by E. A. Seidewitz, and the final Tuesday german took place, Black Bros. furnishing the decorations therefor.

GARDENERS' CLUB.

At the carnation show on Monday night of the Gardeners' Club there was some very fine stock exhibited. M. Thau had a red seedling, C. Akehurst & Son had several varieties of their own origination, whites, pinks and yellow. H. Weber & Sons Co. sent some fine examples of Toreador, Isaac H. Moss showed White Enchantress and Beacon; Fred C. Bauer showed Splendor in good shape; John M. Rider staged White Enchantress and Rose Pink Enchantress, also Genevieve Lord, all in splendid condition. B. G. Merritt several well-grown standard sorts. Lehr Bros. exhibited Rose Pink Enchantress and Enchantress. Altogether the display was an excellent one and was much praised.

NOTES.

During a recent wind storm the place of the Richard Vincent, Jr. & Sons Co. at Chase, was struck by a heavy gust and much damage done to the office building and some of the greenhouses. The former structure was turned on the foundation wall, so great was the force of the tornado, and much glass was broken in the plant houses.

Walter S. Holloway & Son have taken over the premises formerly carried on by W. O. Stran, on the Old York road, and will carry on a general florist business, making a specialty of Easter plants, etc.

Mrs. Schuler Thomas, who was very ill for several weeks, is reported now to be improving, with every hope of her complete recovery.

A new concern has begun business at Towson—L. H. A. Klein, with several houses planted to carnations, Henry Bauer being in charge.

John Cook is confined to his bed at his home on Edmonston avenue owing to a severe attack of rheumatism.

S. B.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

At New York.

BOWLING FEBRUARY 22.

Scott	133	116	135
J. Mander	132	131	186
Zangen		148	158
Donaldson	143	143	142
Schroiner	186	143	144
Shaw	122	114	168
Fenrich		155	142
Henshaw		133	118
W. C. Rickards		151	114

Though the date for the initial meet of the reorganized team was set on a holiday, there was a good attendance and much interest manifested.

At Louisville.

The Florists' bowling club rolled three very interesting games Monday night, Capt. Doerr's team defeating Capt. Walker's three straights. Following are the scores:

	1st.	2nd.	3rd.
James Doerr	142	165	157
Fred L. Schulz	143	109	102
Jos. Wettle	114	128	128
Louis Kirch	180	152	171
Karl Rabe	153	114	115
Total	732	668	673
Wm. G. Walker	146	143	146
Geo. E. Schulz	165	137	133
Andy Brand	113	145	143
Jacob Schulz	104	95	148
Robt. Miller	93	117	70
Total	621	637	640

Louis Kirch was high with 180 and Robt. Miller was low with 70.

F. L. S.

Tri-City Bowling Match.

AT WASHINGTON.

The following scores were made, at the tri-city games between Philadelphia, Baltimore and Washington; the first series was played at the capital city:

GRAND TOTAL THREE GAMES.

Washington	2472
Philadelphia	2257
Baltimore	2390

High scores were rolled by Seybold of Baltimore, 584, three games; Fields of Washington, 577, three games; Robertson of Philadelphia, 482, three games.

AT BALTIMORE.

Washington	2703
Philadelphia	2561
Baltimore	2547

High scores made by Seybold, Baltimore, 651, three games; Hamner, Washington, 574, three games; Dodd, Philadelphia, 570, three games.

LADIES GRAND TOTAL FOUR GAMES.

Mrs. Boone, 378 (high score, Baltimore); Mrs. Baiter, 377; Mrs. Perry, 274; Mrs. Seybold, 174; Mrs. Klutch, 161; Mrs. Van Every, 235; Miss Elsie, 317; Mrs. Cooke, 375; Mrs. Supper, 207; Mrs Medomanksie, 372; Mrs. Shaffer, 495 (high score Washington).

Prizes were awarded to the ladies bowling the high score. G. S.

A BUSY WEEK.

The past week has been a busy one the windup of the season seeing many social events crowded together. Fortunately the supply of flowers, particularly roses and carnations, increased a trifle; not much, but enough, with a judicious substitution of bulbous stock, sweet peas and the like to get orders filled fairly satisfactorily. The American Beauty rose is, we fear, a passing favorite. The scarcity of this rose during the six weeks of the social season preceding Lent, makes it unsatisfactory both for grower and retailer. So few of this variety has been carried in stock by the commission houses during this period and such high prices are demanded for inferior stock, that the retail stores discourage the sale and push long stemmed Killarney, Mrs. Jardine and Richmond, which are placed on the market in such fine condition, that Beauties are not called for in exclusion to all others as formerly when the best was desired. Several large growers have dropped this variety and others, it is said, will follow next season. Carnations are a trifle more plentiful but are still held at good figures, $4 to $5 being asked for stock. Bulbous flowers are plentiful and help out. Daffodils took a tumble and have sold as low as $2 for good stock. Sweet peas are plentiful and popular and there is great improvement in these as a winter cut flower; they are quite a factor being very much used, particularly for luncheons and other light decorations. It is a pity that many of the growers do not know the condition in which the flowers should be cut. So many lots are sent to the market long before they are fit. The sweet pea does not improve after being cut; it should be fully open and at its best when gathered for market and sold the day it arrives. Get the blossoms fully open then the bunches look larger and are full of fragrance and help to swell very materially the figures of the returns. Violets are now at their best and very fine flowers are coming in. Singles range from 50 to 75 cents per 100; coming in and is a welcome addition to doubles, 75 cents to $1. Snap dragon is the list.

The Habermehls have been very busy the past week having large decorations for the Lincoln anniversary dinner at the union league and the second assembly at the Bellevue-Stratford. The decorations for both functions were very elaborate, the central feature of the ball being an electric fountain as well as well flowered acacias, of which this firm has some very fine plants. There were also some fine dinners preceding the ball at which sunken garden effects in the center of the table filled in with pink azaleas was worked out with good effect.

The Leo Niessen Co. says the demand for all high class flowers appears to be increasing. Gardenias and orchids have sold better this season than ever and they are certainly after their grower to keep up the supply of acacia, which, although 50 cents per bunch higher this season than last, is nearly always sold ahead.

The McKissick Bros. are handling a lot of fine southern Asparagus Sprengeri which reaches this market in fine condition. They say their business for the past two weeks has been limited to the supply of stock as they seldom shut the store at night with anything left over for the next day.

The visit of President-Elect Taft on Washington's birthday afforded an opportunity for a fine decoration at the University of Pennsylvania, and this with a number of dinners and the Philopatrian ball on the same day gave them one of the busiest weeks they have ever experienced.

H. C. Heileman who has been a fixture at the Leo Niessen Co. has gone into the retail business purchasing the store of the Wm. Graham Co. of Germantown, where he will continue the retail business lately carried on by that firm.

K.

Washington.

EVERYONE BUSY.

Considering the amount of flowers that were disposed of during St. Valentine's day one would naturally expect that the following week's business would decrease to a great extent; however, such was not the case for everyone was busy with either funeral work, luncheons or dinners. There are quite a few weddings and dinners booked for the next few days, but it is plain that trade will deteriorate somewhat after the Shrove Tuesday parties. The hospitalities, either for the incoming notables or the outgoing contingent, will keep things active, until March 4, when its absorbing incidents will no doubt claim first attention. Washington's birthday created a great demand for violets and other seasonable stock, and almost every store had some appropriate window decoration, in memory of our first president.

Last Wednesday was the day set for the tri-city bowling match between Philadelphia, Baltimore and Washington. There was a number of Baltimore ladies present who are enthusiastic bowlers. Their Washington sisters met them at the train, and escorted them to the White House, where able guides explained all the historic facts regarding the executive mansion. After this they went to lunch, then the bureau of engraving and printing, was explored, and a birdseye view of the city was taken by the ladies from the top of the Washington monument. After taking a good look, they joined the men at the bowling alleys and rolled a series of games; the scores will be found under "Our Pastimes." The men devoted the greater part of the afternoon to the bowling, which was finished about 6 p. m. At 6:30 the bowlers left for Baltimore accompanied by the Washington team, in order to roll the second series of games on the Baltimore alleys.

NOTES.

The Pennock, Meehan Co. will open a wholesale commission house, about March 1. They expect to locate at 1220 New York avenue. Albert Schnell, now with Marche and Co., will be manager, and the firm is to be congratulated on having secured such a capable and popular man.

Geo. Shaffer had the decorations and center piece for the Wood luncheon at the New Willard. The table was 35 feet long, 13 feet wide, and one center piece of Killarney 10 feet long was the main feature of the decorations.

The court of honor which extends from Pennsylvania avenue and Fifteenth street to Pennsylvania avenue and Seventeenth street, will be decorated by the Gude Bros. Co.

Geo. H. Cooke furnished the flowers for the bachelors' cotillion at the New Willard hotel. Killarney roses, white lilac and carnations being extensively used.

F. H. Kramer has taken a liking to the Japanese air plant, and has his windows, and a portion of his store decorated with it.

Z. D. Blackistone executed the decorations at the Japanese embassy; the center piece was made up of Richmond and Perle roses.

J. R. Freeman has an excellent lot of flowering plants which he is displaying in his Thirteenth street store window.

J. H. Small & Sons report good business.

G. S.

Boston.

BUSINESS CONTINUES GOOD.

We are glad to report a continuance of the splendid improvement in the trade of this section. In the efforts put forth to supply the unusual demands everything has been cut short and a general revision of prices has taken place. Unfortunately the Lenten season comes in this week and this is always dull. Funeral work, however, is coming in regularly and from now on will be the chief dependency of the traders. A few sunny days are all that are now needed to force out an abundance of blooms. Orchids, gardenias and lily of the valley form a trio that is next to impossible to overcome and have never enjoyed so wide a sale as reported the past week. The local market, while fairly well supplied, is in no position to control the trade, and foreign markets have been resorted to with the most satisfactory results. Violets too have had a tremendous week, and an excellent stock was available, sufficient in quantity to meet the market without occasioning upward movements in prices. American Beauty rose is off crop and no difficulty is found by the growers in securing their own prices which have soared along a $9 per dozen scale. Killarney is next in importance. Richmond varies constantly, the supply is extremely small and prices run along similar lines, from $2 to $4 per dozen Carnations have been flying high, the market being limited both in variety and quantity. Scarlets are scarce and the local favorite, Beacon, has again proven itself a wonderful variety. Bulb stock of all descriptions is plentiful. Washington's birthday was an ideal spring day, too pleasant for good business, and a light market was noted.

NOTES.

All plans are now completed for the exhibition next Saturday and Sunday, February 27-28, at Horticultural Hall, conducted under the direction of the Park St. Market Corporation. It is promised to be a rare opportunity to witness the highest art of commercial growers and the display is bound to include some remarkable products. Not alone to the local growers is this exhibition confined, for a large number of exhibitors from various parts of the country have promised to co-operate in making this an unusual exhibition. The list of prizes is unparalleled both in number and value and in competition for them many close rivals are to be staged. The latest addition is the Gardeners' and Florists' Club prize of $25 for the most meritorious display in the hall.

Al Hutson, the genial salesagent representing W. H. Elliott, who rarely misses a day at his post, devoted a day to a business and pleasure trip combined in visiting the magnificent establishment of

this firm at Madbury, N. H. Enjoying the few hours allowable owing to the crop intermissions in this way is a particular hobby of this hustler, who returned more enthusiastic than ever.

W. J. Morris of Wellesley, one of the prominent rose growers of the state, has been confined to his home with erysipelas for the past two weeks. He is now on the road to recovery and is allowed out a few hours each day, which time is spent in inspecting his plant, never closing his business eye.

Mann Bros. are distributing a collection of lilac plants of the highest order, a particular and necessary attraction for the early spring market.

B.

Massachusetts Agricultural College.

On February 3, George Sinclair of Holyoke, gave a very interesting talk before the floricultural classes on "Chrysanthemum Culture." Mr. Sinclair spoke largely on methods of culture and gave many details of interest to growers. The following week E. J. Canning gave an excellent address on "The Work of the Private Gardener." On February 17, Edward MacMulkin of Boston spoke on "The Retail Trade." Mr. MacMulkin not only gave a talk full of excellent suggestions for success along this important line of floriculture, but he brought with him a large number of handsomely decorated baskets with different varieties of flowers for the same, and demonstrated to the students in a very pleasing way, methods of disposing of the short-stemmed flowers in a manner satisfactory to the dealer and the customer. He showed how various color schemes could be worked out. These talks by various practical men are proving very popular with the students. They realize that in no other way can they get better details of management and culture of plants and flowers, than from the experience of these successful men. This week M. A. Patten and Peter Fisher are to talk on carnations.

On February 18, a party of short course men left on a three days' observation trip among commercial florists' establishments in eastern Massachusetts. On February 13, the class visited Adams' Nurseries, Aitker's, Beal's, Schlatter's and Ried's greenhouses in Springfield. The dedication of the new instruction building for floriculture and market gardening, and of the new range of greenhouses, promises to be an interesting affair. Many of the florists have signified their intention of sending flowers for the exhibition to be held by the senior class at that time. Several horticultural societies will send delegates to attend these dedicatory exercises. The principal speaker will be John K. Farquhar of Boston, who will discuss in a general way the subject of intensive culture of plants under glass.

American Beauties
The finest in this Market.
Pittsburg Florists' Exchange
15 Diamond Sq., PITTSBURG, PA.

GENEVA, N. Y.—Smith & Gannett have closed a long lease on a store at 53 Seneca street which they are fitting up as a first-class, up-to-date establishment and will shortly move into.

SALEM, O.—This city is to have a new greenhouse, the contract for the building material having already been let to a local firm. The name of the new concern will be the Grandview Greenhouse Co., and it consists of Russell R. Case and Norman W. Weirick, both of this city. The location of the new concern will be on Franklin avenue, immediately opposite the entrance to Grandview cemetery. It is proposed to erect suitable buildings for the purpose of raising plants and cut flowers of all kinds as well as mushrooms and other vegetables. The company expects to be ready for business by Decoration day.

WHITE MARSH, MD.—The greenhouse establishment of Richard Vincent, Jr., & Sons Co., was damaged considerably by a violent whirlwind which accompanied the rain and windstorm of February 16. The office building was twisted nearly a foot on its foundation, the glass partition which separates it from the warehouse and packing room was blown down, hundreds of panes of glass were broken in the greenhouses, tree tops were twisted off and general havoc created. The whirlwind was traveling in a northeasterly direction and seemed to spend its fury on Messrs. Vincent's farm.

The Seed Trade.

American Seed Trade Association.
Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

LEONARD'S pea, Potlatch, is in demand; it is nearest to an improved Stratagem.

THE Nebraska pure seed bill lately introduced is not likely to be considered this session.

CATALOGUE mail trade while good for January, has been set back some by the severe storms the first half of February.

THE death of Eugene Germain, president of the Germain Seed and Plant Co., Los Angeles, Calif., is chronicled in our obituary column.

THE French government, it is said, has bestowed the cross of the "Merite Agricole" upon M. Samson of Samson & Fillon, Angers.

CALLA, O.—The Templin Company here and with a branch at Youngstown, which failed last year, is paying through the trustee an eight per cent dividend. A small additional payment is promised.

EXPORTS of flax seed from the United States during the calendar year 1908 amounted to 1,395,508 bushels, as compared with 4,867,156 bushels in 1907 and 9,810,388 bushels in 1906; imports in 1908 were 44,721 bushels, 81,522 bushels in 1907, and 82,907 bushels in 1906.

CHICAGO.—The onion set market is somewhat easier with prices from 10 to 20 cents under those of last week.—Contract prices on the board of trade February 23 for grass seed were noted as follows: Prime timothy, $3.80, white clover, $15.—Visitors: Frank H. Henry and Robt. Fulton, of Henry & Lee, New York; A. J. Pieters, Hollister, Calif.

Seed Law Making in Nebraska.

Miller's pure agricultural seed bill caused a hubbub in the house, Chairman Kelly's attempt to put a motion for the passage of the bill causing a momentary riot. The bill had been read section by section once before but had been laid over. Miller, the author of the bill, not being present. But the members had forgotten all about this. They had forgotten what the bill was about and yelled loudly that Kelly was proceeding irregularly. But the Hibernian member from Furnas knew where he was "at"; the members did not. In courtesy to their poor memories the chairman finally ordered the bill read again. The bill provides against frauds in concentrated food stuffs and prescribes the percentage of germinal seeds that must be present in seeds offered for sale.

The reading of the bill was a marked instance of where the clerk earned his daily pittance. The bill contains 17 long sections. At first the clerk stood erect and sent forth a sonorous fire of words. Then he looked appealingly at the chairman. But the chairman was obdurate; now that the reading had begun it had to be finished. The house, so anxious for the reading of the long measure, had engaged in conversation for the most part following the practice of impolite society which begins to talk only when the singer begins to sing. After section five had been elocuted by the clerk, Thomas moved to cut out the entire section. He made a long speech and then found that section five was not the section he wanted to cut out. So Cone proceeded to labor. There is a large collection of fine old Roman words in the bill, words like Brassica synapistrum and Cuscuta epithymum—these words Cone dodged with great agility, escaping the tentacles of grasping parentheses and hiking straight down the field of good, old Anglo-Saxon. When the clerk reached section 13 Thomas went back on the firing line, having found this time the section that he really wanted to slay. This section provided that the restrictions of the act should not apply to the sale of seed by a farmer to a purchaser unless the farmer gave the purchaser a certificate. Thomas wanted to see the farmer put under the same restrictions as any other vender of seed. Thomas said his motion arose from a suggestion of an Omaha seed merchant.

Clark said that he was interested in the remarks of the gentleman from Custer but that he was not informed on the bill and that as many merchants had told him that the bill favored the eastern seed houses that he thought all the members should give it further consideration. Consequently, the bill was passed over for a time and will come up when the members are better informed.—Lincoln, Neb., Star. [The bill was later indefinitely postponed by a large majority. —ED.]

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

HUNTINGDON, IND.—The Little River Gardens Co. has just finished a large greenhouse for vegetable plant growing.

IRONDEQUOIT, N. Y.—Several thousand dollars damage was done by the weight of the snow on a large greenhouse owned by the George W. Titus Garden Co., February 16. The snow caved in the glass and ruined about $2,000 worth of lettuce and other crops.

THE mushroom industry in Chester County, Pa., is booming these days and if the market holds there will be much rejoicing in this rural section. One man in Kennet Square shipped 600 pounds one day last week and 5,000 pounds were started for the various markets from Toughkenamon growers a day or two later.—K.

GRAND RAPIDS, MICH.—Dr. Thomas Gunson of the Agricultural College visited the plant of the Grand Rapids Greenhouse Co. February 18. Among other things Dr. Gunson witnessed was two acres of growing lettuce under glass. After the inspection he remarked that he had seen many greenhouse plants in his time, but never any such establishment as this company could show.

DES MOINES, IA.—Francis Lestier is one of the most successful truck farmers west of the Mississippi. Among the permanent improvements built since 1901 are an $8,000 house, under which is a modern cold storage plant, a steam pumping plant that draws water from the river half a mile away and lifts it 145 feet into a monster reservoir, and eight greenhouses. Tomatoes and lettuce are two of Mr. Lestier's favorite crops with which he is very successful.

Cucumber Culture Inside.

By the tone of certain writers, one would imagine that there was only their way of training cucumbers to be successful. But when one writer is so strong for the single stem system and another is equally as sure that the let alone or extension system is the one thing needful to success, then one begins to think that there is something beyond the mere training that has to do with success or the opposite. We may as well admit that we are in favor of allowing all the extension possible without overcrowding, and our reason is that the roots are thereby kept in a more vigorous condition and therefore the more able to take up feed. Plants constantly pinched in are constantly checked, and the roots are not as vigorous as they are on extension plants.

On the face it appears that more fruit is produced by a number of single stemmed plants than by fewer plants taking up the same room in the extension principle, but the advantage is more imaginary than real, for in the extension plants the same space is made use of time after time by tying the vines regularly and insuring always a regular spread of new growth. A good foundation is laid at first by training the laterals so that the principal leaves have room to develop, and these form a kind of permanent protection from the sun and an aid to the roots. It may be said that the same thing occurs with the single stem plants, but if the single stem theory was carried out closely there can be no such thing as new growths without cutting out the old stem entirely.

Still these are matters of detail. What all must do to produce good cucumbers over a lengthy season is to start right with clean, healthy plants and keep them this way by constant attention and plenty of heat and moisture, and maintain a constant growth; this constant growth reacts upon the roots, keeping them all the while active and searching for the manurial sustenance that must be freely given to replace the constant drain on the plants that the cutting of the fruits causes. Seed should be sown thinly in flats or pots over a bottom heat of 70° at least, and, in order that the young plants are not stunted, the soil should be in the benches and warmed up ready for planting in not more than four weeks after sowing the seed. It is best to be ready, for the plants may be set out as soon as the rough leaf is well formed, and they will at once take to the soil.

If grown in flats great care is needed in transplanting. Every little piece of root is needed by the young plant, and if these are broken the plants are checked. Treated properly and watered in at once the little plants hardly feel the removal. For the horizontal wire system of training we let the plants reach the second wire before topping, and then pinch the point out. The resulting laterals are allowed to make about three or four good leaves, and these are again pinched, any fruits that show being rubbed out. Then the fruiting begins, each shoot being pinched at one eye beyond the fruit, and no thinning being done beyond the removal of crooked fruits.

All the time the atmosphere is kept moist and the temperature high; we do not bother with thermometers or give much air. It is easy to tell on entering the house whether the atmosphere is right or not, and whenever there is the least suspicion of dryness throw more water around. Spray the plants regularly several times daily when bright, and all through the early part of the season allow the sun to shine full on the plants. These delight in sun at all times, and the brisk, buoyant atmosphere so well known and caused by the sun shining on a moisture-laden house is just the one thing needed to keep cucumbers healthy and growing freely. The two things are really synonymous. Cucumbers cannot be healthy or clean unless they are growing rapidly.

Feeding should be constant and applied by means of very thin top dressings of rich soil and manure rather than one heavy mulch. Then the little feeding roots are always near the surface, absorbing the plentiful moisture and the food in solution; the plants are working full time in fact, and producing just as much fruit as possible. Where a plant shows signs of failing rip it out and put another in its place, and as for insecticides, well, when cucumber plants cannot be kept clean without them then it is best to grow something else. Grow young, clean plants; keep them always going at full pace; use every bit of sun heat possible and plenty of moisture and feed, and there will be plenty of cucumbers, no matter what system of training is followed. COMMERCIAL.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y., President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

PENNSYLVANIA fruit growers are alarmed at the forward condition of the trees at this date.

IT is stated that the British government intends planting trees on 9,000,000 acres of land, as relief work for the unemployed.

LOS GATOS, CALIF.—John Cilker, a well-known orchardist and president of the Aurora Farm Co., died at his home on San Jose road February 11 after a long and painful illness.

NEW SHARON, IA.—Abner Branson of the New Sharon Nursery and fruit farm gives it as his opinion that the recent freeze, when the trees were laden with moisture, has about spoilt the prospects for a peach crop.

DULUTH, MINN.—At a meeting of the State Agricultural Association, February 19, it was stated that J. M. Underwood, manager of the Jewel Nurseries at Lake City, was interested in this part of the state and may entertain the idea of starting a nursery here.

CINCINNATI, O.—Another step in park extension was taken February 10, when final arrangements were made to purchase the Herrick Nursery, Price Hill. By acquiring this nursery the city will have a stock of young trees sufficient to provide foliage for streets, avenues and boulevards in years to come. The nursery was started 75 years ago by Sidney Jackson.

ANN ARBOR, MICH.—By an agreement with the park commission, a tract of land containing about 30 acres, joining the university tract on the west, has been added so that the garden and arboretum contain about 90 acres. The university has secured O. C. Simonds, a graduate of the literary department in the class of 1878, to assist in the development of this park. He will give a course in the principles of landscape gardening the coming year.

STATISTICS compiled by F. A. Huntley, commissioner of horticulture, shows the following shipments of fruit trees into Washington during 1908: Apples, 1,049,117; pears, 186,915; peaches, 301,523; cherries, 165,721; plums and prunes, 63,240; miscellaneous, 37,156. Total, 1,803,672. The varieties of fruit for this state have to be more or less carefully selected, the principal requirements being that they mature their fruits before the very dry part of summer comes on and that they be drought resistant.

Magnolia Speciosa.

Although known generally as Magnolia speciosa, the fine tree herewith illustrated is really a variety of M. Soulangeana and, like all the varieties of this species, an exceedingly free flowering and showy tree. These showy magnolias are not nearly enough planted in our gardens and parks for they flower early in the season, and are showy over a fairly long time, after which the trees are very distinct and good. The varieties of M. Soulangeana are among the hardiest in the genus and thrive farther north than the majority.

Evergreen Cuttings.

I notice that someone is advising the propagation of the coniferous evergreens from cuttings taken at this time. It is doubtful if this is a safe proposition for this latitude. Here we try to take the cuttings before they have been severely frozen, and we think that October and November are the safest months to operate in. With us we find that the leaves of many of the evergreens are more or less affected by the cold, and they become softened and less rigid after the severe freezes. This condition is largely due, I presume, to loss of water, and an experienced man can tell by feeling the cuttings whether they are fit for propagation.

The evergreens seem to suffer much worse than the deciduous trees in respect to loss of moisture during our winter months. Our deciduous shrubs, where the wood is well ripened, do not seem to be much affected by the cold, and so far as their condition for propagation is concerned they may be propagated at any time during the winter. The limit is difficult to fix, but with those cuttings which root from the callus and which are slow in forming a callus, it is seldom desirable to take cuttings after February 1. The trouble is that the buds will feel the advancing season, and will start into growth before it is possible to form roots, so of course they soon perish.

Wood of free-rooting shrubs and trees like the willows, elders, currants, etc., can, of course, be taken until they are almost in leaf. Indeed there seem to be few hard and fast general rules for the guidance of the propagator, and there are but few months in the year that the propagation of nursery stock from cuttings is not in progress either from greenwood, half-ripened or ripe-wood.

JOHN F. COWELL.

American Landscape Architecture.

Professor F. A. Waugh, of Amherst, gave an interesting lecture on "American Landscape Architecture" before the Massachusetts Horticultural Society February 20. The lecturer said, in part: The art of landscape gardening is now well established in America. A considerable number of professional landscape gardeners serve a constantly widening circle of clients, and a new and higher standard of public taste is being raised. It is worth while to ask the question whether in landscape architecture we have achieved anything worthy of our time, anything responding to the spirit of the twentieth century, anything distinctive, representative, national, American.

MAGNOLIA SPECIOSA.

Continuing, the lecturer said, in the field of landscape architecture, criticism is almost unknown; and this fact presents unquestionably the greatest handicap under which the art labors. He considered the refinement which criticism has brought to literature, and said: "A progressive literature without constant criticism is an impossibility. Most productive writers recognize this. They welcome intelligent criticism, even when it rests heavily on their own works. Some writers and all publishers industriously cultivate criticism."

Professor Waugh gave interesting facts concerning his own correspondence with landscape architects in America. Some data and some valuable expressions of opinion have been secured, he said, but the big result of the whole investigation is to show the very general and hearty suspicion in which all such inquiries are held. Some landscape gardeners politely but firmly refused to give any information regarding their own works or anybody's else. With rare exceptions, information, if given at all, is

given grudgingly, as though a favor had been presumptuously and unwarrantably asked. This being the attitude toward the giving of information, what is to be expected when these men are asked for an expression of opinion?

He told of Andrew Jackson Dowling, "by all odds the first American landscape gardener," who was a nurseryman before he became a gardener. Frederick Law Olmsted, the leading designer of the period after the civil war, was spoken of at length and some of the public places he beautified were described in words of praise. "Of these," said the speaker, "the best known are the world's fair at Chicago (especially the wooded island and lagoon), Mount Royal park, Montreal; Biltmore, N. C., and the railway station grounds of the Boston & Albany Railroad. If we add to this list Franklin park, Boston, and the Muddy Brook parkway we have a reasonably representative selection of his best and most characteristic work.

Olmsted introduced a new appreciation of natural scenery. He first taught us to admire Nature in her own dress. Downing was, of course, a lover of natural landscape, but this element of his character was not brought strongly forward in his landscape gardening. Adaptation to site and surroundings was the keynote of Olmsted's work, and this also amounted to a new discovery in landscape art. He discovered the native flora. Gardeners everywhere were planting Japanese magnolias, purple beeches and Camperdown elms. Olmsted turned boldly, and not without violent opposition, to the commonest roadside shrubs. He adopted the outcast weeds. With the richest indigenous flora of any country in the world, we were still planting the species and varieties of European nurseries. We may remark further that this use of the native flora was the one Olmstedian principle most quickly acclaimed and adopted by others.

The native plants were used in large quantities. Common dogwood and viburnums were put in by carloads. For the first time in the history of landscape art, plants were adequately massed. This principle was not carried to extreme, however; and in fact it has not yet received the development which it merits. Indigenous plants were given their natural environment. Much attention was given to the development of this principle, especially by some of the followers of Olmsted.

The old controversies over styles have been hushed and instead of them we now enjoy a remarkably catholic taste and electicism of treatment. We have all grades of the natural style, every shade of adaptation of the Italian style, examples of the Japanese style, and hundreds of excellent works which meet the requirements put upon them frankly and adequately without reference to any set "style." This breaking away from set and conventional styles indicates that American landscape gardening has now taken root in its own soil. The services of the profession have passed largely from private into public fields. The leading problems now are not private estates of gentlemen, but municipal parks, playgrounds, and city planning. So broad a field of benevolent humanitarianism was never before opened to any part.

"My own judgment," said the speaker, "is that American landscape architecture, as it comes more and more to its proper estate, will be influenced more and more by the native landscape. It will conform itself in a larger and more fundamental way to the topography and the scenery of the continent. American landscape architecture will some day utilize the boundless resources of natural scenery. Niagara Falls must some day be the centre of a public park. The Yellowstone geyser region is already reserved and should some day be developed by the skilled hand of a competent landscape architect. The big trees fall into the same order. And some day the Rocky mountains, the great plains, the Florida Everglades, the great lakes, the Mississippi and the Hudson, Lake Champlain and the Adirondacks must all be opened up to public use as a past generation opened up the coal mines of Pennsylvania, the forests of Wisconsin, and the gold veins of California. Here is the most magnificent opportunity that landscape architecture ever had, and this is the field in which this greatest of all arts will become finally, magnificently and characteristically American."

GOOD DEMAND.

The demand for flowers the past week was exceptionally good. Two or three good sized carnation orders for openings kept this flower pretty well cleaned up, but there was no noticeable increase in the price, $3 per 100 buying the best grades, from this down to $1 per 100. Roses were good property all week and sold out clean every day at prices ranging from $8 per 100 down. The market was shy on lily of the valley and sweet peas, with just about enough bulbous stock to go around. Single violets had a good call while the double, at times, were sold to fakirs, and we all know the result. Bunches of Asparagus plumosus and Sprengeri were good property, in fact, green goods of all kinds were in good demand. At the present writing there is a scarcity of red carnations and red roses, otherwise we have a good supply of flowers.

NOTES.

J. Hansen, who has greenhouses on Brookline avenue, in the beautiful suburb of Clifton, had the misfortune of having one of his houses, containing Asparagus Sprengeri and ferns, frozen up during the past week. The ice and sleet on a large tree near this house caused one of the limbs to break and crash through the glass. The damage done was considerable, and Mr. Hansen can ill afford to lose the stock, as he has had some pretty tough breaks lately, there being sickness in his family. Notwithstanding all this, he looks at everything in a philosophical way.

Geo. Corbett, of College Hill, is loud in his praises of the new Boston violet, of which he has quite a number benched. He sent The J. M. McCullough's Sons Co. 4,000 of these for St. Valentine's day, and they sold for $1.25 per 100 right through. Pretty fair picking from 1,500 plants in one day, and without exaggerating they were the finest violets about the city.

The Hyde Park Rose Co received a letter from J. Gravereaux, of Paris, France, the past week, asking this firm to display its Taft rose at the international exhibition of rose novelties, about June 15, 1909. This firm is going to take advantage of same and forward a few of the plants, and we hope they will be as successful as the disseminators of Rhea Reid. S.

It takes good, healthy plants, free from rust and other diseases, to produce a crop like this. Our plants have retained their health and vigor since the date of this photograph, which was taken three years ago. It takes healthy plants to produce healthy cuttings, so, if you want cuttings of this kind, send us your order.

SCHEIDEN & SCHOOS, 60 Wabash Ave., Chicago

Indianapolis.

Business is reported as good in general, and stock is plentiful just now.

F. W. Gust of A. Weigand & Sons, has resigned and is going to take a trip through the east before he locates permanently. H. Kipke of the same firm has just returned from Chicago.

Bertermann Bros. Co. reports great success with its new machine in making deliveries promptly.

H. L. Weigand contemplates buying an automobile for his private use.

H. W. Rieman has just bought a new delivery wagon. C. R. G.

NEW ORLEANS, LA.—James Newsham is going largely into the orchid collecting and dealing business and has received a number of large orders of late, including one for 1,500 plants from a Chicago firm.

Order now and plants will be shipped when instructed.
JACKSON & PERKINS COMPANY, Newark, New York

SUCCESS WITH CHRYSANTHEMUMS
Depends upon four important factors: **Varieties grown,** quality of stock, cultural methods and market price. If the first two are carefully considered, the others are easier controlled. Our hobby is the **BEST COMMERCIAL KINDS.** These we grow in quantity, and the quality of our stock is unsurpassed.
We also grow those suitable for any other purpose.
Let us have a list of your wants before placing your order.
ELMER D. SMITH & CO., Adrian, Mich.

Dreer's Tuberous Rooted Begonias

The Begonias and Gloxinias which we offer are grown for us by an expert who has made a specialty of this class of stock for many years, and there is no better or finer strain on the market.

PREPARE FOR EASTER

An Immense Stock of Choice Easter Plants Now Ready.
Blooming Easter Week or Before if Desired.

"From whom shall we purchase our Easter supply this sseaon?" That seems to be the cry all over the country. "We have tried so many already. I know what I am going to do" some sensible man says. "I shall go back to Godfrey Aschmann. He is the best and most reliable man in the business. What he advertises he has and there is no bluff about it, I tell you his usual stock of **Azaleas** can't be beat, and the **Lilies** he has this spring are the finest I have ever seen. No wonder. He imports them direct from Japan. He has a friend in Japan who looks after his interests and sends him the cream of Japan's plants. He has enough to supply all, and I tell you no lie when I say that his other plants, such as **Hydrangeas, Cinerarias, Spireas, Ficus, Araucarias, Palms, Hyacinths, Tulips, Daffodils, Etc.,** are of such excellent quality that they will make a man's mouth water, and they are so remarkably cheap that we often wonder how he can do it."

Araucaria Excelsa, 5½ to 6 in. pots. 3, 4 and 5 years old, 4 5, 6 and 7 tiers, from 18to 25 to 30 in. in height. 60c. 75c. $1.00 to $1.25.

Araucaria Robusta Compacta and **Excelsa Glauca,** specimen plants, small stock, the same in width as in height. 6-in. pots. 4 to 5 years old, 6 7 and 8 in. pots. 3. 4, 5 and 6 tiers 20 to 25 to 30 in. high. $1.50 $1 75 to $2.00 each.

Azalea Indica. We are headquarters for this well known Easter novelty. Three houses full of our direct importations: grown under contract for us in Belgium. Only the best well known American varieties are raised. Mme. Van der Cruyssen, chuck full of buds. Deutsche Perle, Simon Mardner, Niobe, Empress of India, Vervæneana, Helena Thielman. De Schryveriana Dr. Moore. Illustre, Apollo etc., double varieties. Price: 50c, 60c, 75c. $1.00, $1.25, $1.50, $2.00 to $2.50 each.

Begonia new improved Erfordi, 5-in., $2.00 per doz ; **Begonia Flambeau** 5-in $2.00 per doz

Spirea Gladstone 6-in. pots, 40c 50c. 75c; Japonica Floribunda Grandiflora, 6-in., 25c to 35c.

Primula Obconica, 5-in pots, $2.00 per doz.

Easter Lilies, Lilium Multiflorum, raised from fine 10-in. bulbs: in fine condition: can meet all wants: medium height 6-in. pots, 10c per bud; 5 buds and upwards to a plant: under 5 buds, 12c.

☞ Secure your order early.

Double Daffodils, Von Sion, best yellow, 3 bulbs in a 5-6 in. pot $2.50 per doz. pots.

Hyacinths, 4 best colors. King of the Blues, Grand Maitre (light blue). La Grandesse (best white), Gertrude (best pink), 4-in. pots, $12 00 per 100. Now outside in cold frames. Two weeks will force them into bloom.

Asparagus Plumosus Nanus, 3-in., $5.00 per 100: 4-in.. 10c.

Hydrangea Otaksa, in bud, 6-7 in. pots, 35c, 50c, 75c to $1.00 each.

Cineraria Hybrida, best strain. 4-in. pots, $10.00 per 100: 5½ to 6 in. pots, just right for Easter. 25c, 35c, 50c.

Areca Lutescens, 4-in, pots, three plants in a pot, 25c.

Ficus Elastica (Rubber), 5½ to 6 in pots 25c; 30c, 40c to 50c.

Boston Ferns, 6-in pots 50c: 7-in. pots. 75c: $1.00 to $1.25: 8-in. pots, $1.50.

Scottii Ferns, 5½-in. pots. 40c: 6-in. pots, 50c: 7-in. pots, 75c to $1.00: 8-in. pots. $1 50.

Whitmani Ferns, 7-in., as big as a bushel basket, 75c. $1 00 to $1.25: 9-in pans, as big as a washtub $1.25 to $1.50.

Neph. Amerpohli, 5¼. 5½ to 6 in. pots, 30c, 40c and 50c.

Kentia Belmoreana, 5 good leaves. 5¼ to 5½ in. pots, 25 to 30 in high, 50c to 60c: 4-in., 35c.

Kentia Forsteriana, 6 to 7-in pots, 25, 30, 40 to 45 in. high, 75c, $1.00 $1.25, $1.50 to $2 00 each.

Kentia Forsteriana, 5¼ to 5½ in. pots, 20 to 25 in. high 50c to 60c.

Jerusalem Cherries for Washington's birth day, large plants, full of buds, 6 to 6½in. pots, 35c-50c, 75c.

Moonvines (Ipomœa Multiflora), best white Moonvine for which we have a world-wide reputation, now ready, 2½-in. pots, $5.00 per 100.

Have an Immense Stock of Easter Plants.

Please state if in or out of pots.

☞ All goods must travel at purchaser's risk only. Cash with order, please.

Cleveland.

EVERYTHING SELLING.

The pre-lenten season was probably the best the trade has experienced for several years. With the exception of two weeks all stock has cleaned up at satisfactory prices since the first of the year; it is true that a number of the growers have been off crop, still the demand has been far greater than heretofore, and we are sure that if the crops had been on we could have disposed of the stock to good advantage. Owing to the continued shortage of roses, bulbous stock is still moving nicely. We do not think there will be nearly as much bulb stock on the market this season on account of the caution the growers used in placing their orders, owing to last season's over-stocked market and the low prices these goods brought. Roman hyacinths and Paper White narcissi are about done for. The demand for lily of the valley, sweet peas, and violets, has been equal to the supply. Greens of all kinds are scarce.

It is evident that the plantsmen anticipate a record-breaking demand for stock this Easter; all are hustling around getting things in order for the busiest time of the year.

Frank Smith, from the firm of Smith & Fetters, is expected home some time during the coming week from his trip through the southwest.

A. Schmitt, Bratenahl, has a splendid assortment of flowering plants including azaleas, genistas, cyclamens, lilacs and primulas.

The Cleveland Florists' Exchange is receiving some extra fine Formosa lilies from the Lamborn Floral Co.

After a siege of sickness lasting several weeks Fred Griffin, Euclid avenue, is now convalescent. FORESTER.

Standard Flower Pots!
Packed in small crates, easy to handle.

	Price per crate		Price per crate
1500 2-in., in crate,	$4.88	144 6-in., in crate,	$3.16

RANDOLPH & McCLEMENTS, Successors to Chas. T. Siebert, Baum & Beatty Sts., Pittsburg.

STENZEL GLASS CO.
2 Hudson St., NEW YORK.
— Specialists in —
GREENHOUSE GLASS
in carload lots or less direct from factory.
NO HANDLING. NO BREAKAGE

Lock the door before the horse is stolen, and insure your glass before it is broken.
For particulars concerning Hail Insurance, address
JOHN G. ESLER, Secretary
SADDLE RIVER, N. J.

THE BEST WAY
to collect an account is to place it with the
National Florists' Board of Trade
56 Pine Street, NEW YORK,
WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

Albany N. Y.

The Florists' Club held its fourth annual banquet February 18 at the New Kenmore, about 40 members being present. The floral decorations were in excellent taste and were contributed by the members who took great pride in the selections they made. President Fred Goldring assumed the duties of toastmaster until he was compelled to leave to catch a train, after which F. A. Danker officiated. Responses to toasts were made by John A. Howe, Jr., James H. Snyder, Rhinebeck, John McAllister, and others. The traveling representative of Van Zonnevelt & Phillipo, gave an interesting account of an exhibition that the growers of Holland are to hold this summer. The arrangements for the banquet were in charge of a committee composed of Patrick Hyde, Edward F. Meaney, W. C. King and Fred Henkes.

As a result of a conference held lately between official representatives of the Eastern Nurserymen's Association, the New York Florists' Club, New York State Fruit Growers' Association, the Western New York Horticultural Society, and the Orleans County Fruit Growers' Association with R. A. Pearson, state commissioner of agriculture, it was decided to take action against bringing the much-dreaded gypsy and brown tail moths into the state. A delegation headed by Commissioner Pearson called upon Governor Hughes in regard to the matter. The outcome is expected to be legislation authorizing a scientific contest for the eradication of both insects in the state.

Springfield, Ill.

A. C. Brown has about 75,000 square feet of glass given over to the culture of cut flowers as well as geraniums, azaleas, palms, araucarias, etc. There are three 317-foot houses devoted to carnations. His new red carnation Sangamo is looking fine, of which there are about 1,000 plants. There is also a bench of carnation, Superba, and another of Governor Deneen (royal purple). In the rose section, Killarney, Richmond, Mrs. Ames, Uncle John and American Beauty are grown.

Miss Bell Miller has her carnations in excellent shape, growing principally Lawson. White Perfection, Bountiful, Beacon and Dorothy Whitney (yellow). Some fancy snapdragons are also grown here, and two plants of bougainvillea, which furnish an abundance of flowers which are used to advantage, especially for pulpit decoration.

A. C. Canfield, who grows almost exclusively for the wholesale trade, has an excellent stock of carnations, all of the leading varieties. Also Bride, Bridesmaid and American Beauty roses. Mr. Canfield ships his cut flowers to C. A. Kuehn of St. Louis.

Geo. M. Brinkerhoff arranged the flowers on the speakers' table for the recent Lincoln banquet given at the Armory when 800 persons were in attendance. The grouping of palms, ferns, etc., was by Geo. Van Horn and A. C. Brown.

Geo. Van Horn, proprietor of the Capitol Greenhouses, grows principally miscellaneous stock, including geraniums, begonias, palms and ferns. Some space is also devoted to carnations and roses.

R. T. Donnell grows the leading varieties of carnations, and his place is in excellent cultural shape. He ships on commission to the St. Louis market.

Carl Rauth supplies his retail trade with fine stock of his own growing, his house being devoted mostly to carnations, roses and some miscellaneous stock.

Geo. M. Brinkerhoff is a commercial grower, devoting his attention to carnations and pot plants. Azaleas are a great specialty of his.

Wirth & Gaupp have a fine range of carnations and an excellent stock of geraniums, begonias and ferns.

Colorado Springs, Colo.

The El Paso country club of this city demands something new or original at its annual ball and banquet, and the decorations put up by Hayden, of the Colorado Springs Floral Co., at the recent event, certainly may be considered along this line. The decoration in question signified a moonlight night in Dixie; the spacious and lofty hall was profusely covered with smilax and palms, the ceiling being completely hidden with southern smilax interlaced with several hundred small electric lights representing so many stars. A larger and more radiant globe of spherical form represented the moon and the reflection of all partially embedded in a sky of green, was very significant of the occasion and the directors of the club unanimously agreed that it was Hayden's best effort in many years. The mantels and portieres in the ladies' rooms were gracefully trimmed with southern smilax and wistaria with large artificial poppies grouped and scattered according to area of green foundation. Roses, carnations, violets, and other standard cut flowers were liberally distributed throughout the building.

Wm. Clark, the pioneer florist of this locality, is now a sojourner in south California taking a well-earned rest. Thirty-five years residence in an altitude of over 6,000 feet has a tendency to shatter the constitution of the strongest.

Carl Hagermeyer has purchased the retail department of the Knob Hill Greenhouses from Henry Monaghan and intends giving it his personal attention in the future. His headquarters are 118 North Lejon street.

John Smith has been very successful in violet culture this year; he is now growing a fine batch of calceolarias for Easter, which is a difficult proposition in this dry climate.

Henry Monaghan has had his annual visitation of grip and is now convalescent from a severe attack.

Business since the holidays has been satisfactory.

Madison, N. J.

Calanthe culture was the subject discussed at the monthly meeting, February 10, of the Morris County Gardeners' and Florists' Society; Percy Herbert was essayist. He treated only on the deciduous species, as these are they mostly grown here for the trade around Christmas. Mr. Herbert grows quite a lot of these beautiful orchids and grows them well. He told us how he did it from start to finish, and certainly made the thing look easy. A rising vote of thanks was tendered him. The March meeting, as has been our custom, will be devoted to carnations. Carnation night is only second to one of the nights of our annual chrysanthemum shows, and we are going to try to make March 10 a second smasher. The growers of novelties have always done us and themselves credit, and we sincerely hope they will come up strongly this year. There are lots of fine candidates for public favor, and nothing advertises like putting them under the eye of the people. We will take care of the standard varieties ourselves with the help that Orange will give us. The Orange brethren had some rattling carnations shown at their smoker, and they had other things there, too. The delegation from here was royally entertained on that occasion. We are to have an essayist of national reputation.

STOCK SELLING WELL.

Business conditions the past week were very satisfactory, stock in nearly all lines selling well. Roses still remain somewhat scarce. They are of fair quality and sell well. Carnations of good quality have been very scarce. They sell unusually well. Violets, lily of the valley, sweet peas, etc., have a fair demand, and the supply is adequate. There is now plenty of bulbous stock, which sells satisfactorily. Green goods, with the exception of smilax, are very scarce. Other stock can be had in satisfactory quantities, and finds a satisfactory demand.

The regular monthly meeting of the Kentucky Society of Florists will be held Tuesday night, March 2, at Fred L. Schulz's store. A good attendance is again looked for. The growers who could not ship their novelties for the last meeting will probably be able to do so at this time. Their efforts will be appreciated. Robt. Miller will have a paper on growing cyclamens, which should prove very interesting.

The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

NORTH TONAWANDA, N. Y.—The King Construction Co. has found it necessary to establish a distinct department for the handling of all matters pertaining to sales. H. E. Bates who is well known among growers in the east, has taken charge of this new sales department. Mr. Bates has recently been with John A. Payne of Jersey City, N. J. Previous to this, he was with Hitchings & Co. and with the Pierson-Sefton Co. The King Construction Co. aims to keep its organization up-to-date and the organization of this department is in line with this policy, and will enable the company to quote promptly in reply to any inquiries for their construction or other goods.

Cement Gutters.

ED. AMERICAN FLORIST:—

We quote the following from one of your contemporaries. "Cement gutters and benches versus those of other material, furnish a topic that is often heard about lately. Winter weather has caused much havoc with the cement work at different establishments." Since we have recommended cement gutters to those who saw the same at our place during the carnation meeting, as well as to a number of friends who wrote in regard to it, we wish to say, that our cement gutter came through the severe winter weather in perfect shape. We are so well pleased with our experiment with a real concrete gutter (cement and gravel, wet) that we are now casting 1,200 lineal feet of the same kind of a gutter.

Anyone familiar with cement work can make these gutters, and the outlay for forms, cast iron attachments and reinforcements are small. While we are always glad to answer inquiries regarding this gutter, we wish to say, that drawing and instructions for making the same will be published, if further tests on a larger scale affirm our expectations. We also wish to say that notwithstanding careful inquiries we failed to locate any cement greenhouse walls in this county, with which the winter weather had "caused much havoc," nor, we are glad to state, was anybody in this vicinity unfortunate enough to have his cement benches exposed to the winter weather.

SMITH & YOUNG CO.

Defective Heating Apparatus.

ED. AMERICAN FLORIST:—

We have a house on the southwest corner of our plant that is piped to heat to 58°. It fails to reach the desired point by 10° when all other houses are at a correct temperature. We think the fault lies in the fact that four 4-inch feeds are taken off the 7-inch main flow practically all together, one of these 4-inch being the feed for the above mentioned house. This 4-inch feed has to travel 70 feet west and then 50 feet south before dropping into coils. It also feeds three radiators in workroom. Do you think that by taking this 4-inch direct to the boiler we could get desired results? M.

From the diagram and the description it is evident that the 4-inch flow to the southwest house not only has much the longer run but that it is carrying a much larger radiation than either of the other flow pipes. Although nothing can be told from the date furnished it would also seem likely that the southwest house is not as heavily piped as the others, which would increase the difficulty of obtaining the temperature desired.

Provided the large main by which the smaller flow pipes are supplied, is sufficiently large, as seems to be the case, it will not help matters very much to connect the flow and return leading to the southwest house directly with the boiler, as this would still further increase their length and it would seem better to try one or all of the following changes: (1) If it is possible to elevate the coils in the southwest house this should increase the circulation and consequently afford more heat. (2) Try choking off the circulation in the other mains, which are now supplying only about two-thirds the radiation in the southwest house and the workroom. (3) If this does not afford the desired temperature run a separate flow and return (2 ½-inch) either from the large mains or directly from the boiler, to supply the radiators in the workroom. This will tend to equalize the radiation upon the 4-inch flows although the one to the southwest house will still be at a disadvantage on account of its being of greater length than the others. It is possible that the circulation can be controlled by partially closing the valves on the other flows and if so this will be a simple way out of the difficulty.

Sometimes You Forget

That we make every part of a greenhouse but the glass—that we sell any part.

You remember us on the bigger things, but often it never enters your head to think of sending to us for a tub of putty or a few fittings.

But you ought to— and here's why:

Our sole business is manufacturing every part of a greenhouse. We give it our undivided attention.

Everything we make is made with an exact knowledge of just what conditions it must meet, and that is why an ever increasing number from all over the country are continually sending us their orders for just the smaller things.

You know how well we do the big things, and if you will only stop to think, it is just because of well done little things, that it is possible for us to do so thoroughly and enduringly the big things.

So whether white lead, glazing nails, bench fittings, it matters not what, first write to

Louisiana Red Cypress

As described by Bassett & Washburn, Chicago.

"Replying to your favor requesting our experience with Pecky Cypress we will say we have been using this grade of Cypress in our greenhouses and plant benches for the last ten or twelve years and so far have not found any of this wood that has all rotted out. We formerly used Hemlock and Pine, but found that two-inch stock only lasted about four years, while so far we have had no Pecky Cypress rot out in ten or twelve years. We use clear Cypress for all our roof work, ventilators, etc., and it is very satisfactory. We think it is the only kind of lumber for the purpose."

IT IS THE MOST DURABLE WOOD KNOWN. Ask about it at your local lumber yard or write

Nashville.

STOCK PLENTIFUL.

Business has been rather quiet for a week or so past, with an abundant supply of flowers of every kind on hand. Some of the finest azaleas of the season are to be seen in the retailers' windows. The spring flowers, still from under glass, however, are coming in. Emperor, Empress and Von Sion narcissi and violets are abundant.

NOTES.

Geny Bros.' violets are coming in abundantly. They are enthusiastic over their new plant, some four miles from the city, which they are constantly adding to, an already fine range of houses. It is not their intention to abandon their city gardens, located right in the heart of the city and very convenient to their business, but to use as a supplemental supply, and for the growing of roses.

The Joy Floral Co. completed, a short time before January 1, two more splendid new houses, 32x400 feet long. It was too late, when finished, to put in roses, so they put in a stock of sweet peas, which are now on the market.

Buds.

Early buds, early buds,
Waken not so soon;
Winter frosts, winter floods,
Hide behind the moon.
Brave not the bleak air,
Tempt not the frost;
Wait for the meek air,
Wait—or be lost!

Tender shoots, tender shoots,
Cover up your eyes;
Winter rime round your roots
Ambushed softly lies.
Dare not the white mist,
Breathe not his breath;
Silent the night mist
Steals—to your death!

Dainty green, dainty green,
Back and dream again,
Winter's wrath, winter's spleen
Ye will brave in vain.
Once in the cold blast
Hope gaily hied.
Fate blew a bold blast,
Hope shrank and died!

—Gardening World.

Greenhouse Construction.

III.—BY W. W. COLES.

Water Supply.

For water supply, if connections can be made to a water company that gives a fair pressure, it is often the cheapest and surest. But where this cannot be done a water plant must be put in. Sometimes the supply can be obtained from a stream or lake with the advantage of a short lift, but a good well has the advantage of furnishing water that can be used for drinking and all other purposes. Gasoline engines are now doing good service pumping water. They do not necessitate the keeping up of a fire and the heating up of the place in summer which steam pumps do, and they have now become very reliable and are fairly well understood. There are now water systems with pneumatic tanks that can be placed underground or anywhere else that it is desired.

The tank furnishes a reserve supply under air pressure, and does away with the elevated tank with its dangers of freezing, etc. Whether or not the same service would be more expensive under this system I do not know, but I would give it careful consideration. The water pipes to the houses should be large and with as few turns as possible. Spigots for ¾-inch hose spaced for 50-foot lengths of hose seems to be the accepted practice. There should be spigots in every walk so that each side of every bench can receive proper attention. The water pipes should be laid before the benches are built, and should be of galvanized pipe; they may be buried just under the level of the ground. A handy arrangement for spigots is to have the upright pipe come above the bench about a foot and far enough back in the bench so that the spigot clears the walk an inch or two. This brings them up where they are easy to handle and still out of the way of anything in the walk. One of the patent hose connections that snap and unsnap in a second should be used. It takes too long to screw up and unscrew every hose connection.

Manure Water System.

If the place is to be large enough, a manure water system should be installed. This may be connected into the other water pipes or a separate system of piping may be put in. Of course, it is cheaper to use the same pipes, but there is always danger of typhoid fever in case some one should drink out of the spigots, and when the fresh water is turned in there is danger of syringing with the manure water left in the pipes, which will at least give a mussy appearance if it does not ruin blooms. For making the manure water a concrete tank is built, divided in the center by a screen. On one side the manure is dumped and the water run in, and on the other side the manure water is pumped out. A pump can be installed and operated by the same power as the fresh water pump.

Heating.

If the place is to be of fair size or if the prospects are that it will be, steam heating will probably be decided upon. If the gravity system is to be used the boilers should be set low enough so that the lowest point in the returns will be two feet above the water line. Steam traps are used a great deal now. They permit the boilers to be located higher—on a level with the houses, in fact—and insure a good circulation. They have the disadvantage of being a mechanical device, while old Mother Nature never fails to pull through gravity. But the mechanical perfection of traps nowadays makes them fairly reliable. Where the boilers cannot be lowered there is no question about using a trap or some other similar device. Where they can be lowered it is a question; even in this case, though, it is claimed that a trap improves circulation and saves fuel. The conditions peculiar to the job and personal taste must again decide.

The flow pipe from the boilers to the houses should be as large as will ever be necessary for all that may be taken from it, and provision in the way of Ts and plugs should be made at every place where it is possible that a connection may be wanted. For piping the houses

there are several systems. There is the one pipe system which has no returns. The pipes are large and steadily rise all the way from the boiler, with an air valve on the end. The steam comes up and the drip runs back through the same pipe. On a place where this is installed it gives excellent satisfaction, but when this firm built a new range a different system was put in. There is the system of hanging all the pipes to the roof, but this is not much in favor. The most approved practice is to hang the pipes on the walls and under the benches. Sometimes a large flow is run overhead and the returns brought back underneath. This has the disadvantage of having the flow valves at one end and the return valves at the other, or, if no flow valves are used, the pipes fill up with water when the return valves are shut off, which keeps the pipes warm longer than is intended, and makes it hard to maintain a water level in the boilers. Another plan is to have the flows start at the center of the houses and run to a common return at the ends, with a check valve in the end of each return. This permits all the operating being done at one place for the flow valves at the center of the house are all that have to be handled. This is all right if a trap is used, so that no air valves are required.

Pipe Arrangement.

Under most conditions, perhaps the handiest arrangement is to have the coils start and return to the same place, the center of the house for long houses, and the end for short houses. This is where the 400-foot house works out so nicely. This makes coils 200 feet long on each side, and if hung so they swing easily and four inches allowed for expansion they will give no trouble. If longer coils are used more care must be used in allowing for expansion. Of course, for short houses such as are advisable for a plant business, the pipes will start from the ends of the houses next the shed and not from the center. Under the benches the flow starts up next the bottom of the bench, gradually drops to half way to the ground at the end, where swing joints are made for expansion, and gradually drops again on the way back, so that it ends just above the ground. The pipes on the wall are handled the same way.

Boiler and Work Rooms.

The boiler house or pit should be built so that more boilers can be readily added at any time. Provision for plenty of coal storage should be made; this also should be made so that it can be enlarged at any time. Then there is a work room to be provided, a potting bench, pipe-fitting bench, office, flower cellar, places for the storage of pots, lime, tobacco stems, etc. Of course, all these vary with the character of the place, but they must all be considered together to get their proper relation and proportion. And they must all be arranged so they can be enlarged when necessary.

Now, the object of these notes is not to tell how to build or what style or what system to use. Even where the writer has expressed a choice it is not urged on anyone else unless he can figure it out to be the best under his conditions. The idea has been simply this: to enumerate the many considerations that enter into building, and to urge a careful consideration of all of them before any part is attempted. When the whole job is planned each part can be done at the most advantageous time, eliminating the undoing of one job to get something else done that should have been done first, or the doing of something at an added expense, because something else that has been done is in the way.

To sum up: Build on a well-drained location where good soil and plenty of water are available and where as many other advantages can be secured as possible. Plan the entire job allowing for expansion in every feature. Order all material early. Push the work of construction and be ready to plant in good season.

New Dwarf Dahlia Mignon.

We present herewith an illustration of the new dwarf dahlia, Mignon, being disseminated this year by Warnaar & Co., Sassenheim, Holland. The illustration was prepared from a photograph of an oil painting and may be taken as a correct likeness of the plant as it appears. It is offered in about six shades and these are not yet all named, but they will be before delivery. It is an entirely new strain of dahlia and will doubtless prove a very valuable bedding variety owing to its very dwarf habit and its early flowering. The plant grows only 14 inches high, commences to flower in June, and goes on until cut down by frost in autumn. The flower committee at Amsterdam last year awarded this valuable novelty five first class certificates and five awards of merit. It should become very popular both for bedding and cut flowers.

THE NEW DWARF DAHLIA MIGNON.

THE RETAIL TRADE

Easter Trade Suggestions.

One smile is worth a dozen frowns.

Preparation ahead saves many hours of rush and overtime work.

A good thing to remember is that individuality is always a winner.

Make an effort to be different from your fellow craftsman this Easter and you'll be surprised with the results.

You are going to see many strange faces in your shop this year. Meet them face to face and give them the glad hand and you will find that you have made some new customers.

An idea for the decoration of your windows for Easter week: Monday, azaleas; Tuesday, genistas; Wednesday, rambler roses; Thursday, lavender rhododendrons; Friday, lilies; Saturday, a mixed window. This will surely bring results.

Make all of your plant deliveries Friday and Saturday, giving them special care. This will leave the way open for the early delivery of cut flowers. Start all violet orders by 6 a. m., then they will be sure to be in time for church.

The regret over lost chances is one we always feel keenly. Every man recalls some business opportunity that he failed to embrace. Let this not be said of you after the Easter trade is over. Now that the Lenten season has started get the "idea bug" busy.

Fine Church Wedding Decorations.

The accompanying illustration shows the decorations at the Clark-Hun wedding in the cathedral of All Saints, Albany, N. Y., February 21, 1908. The decorations were by Eyres, the rood screen being covered with southern smilax, beech sprays, and Lilium Harrisii, the steps, with white lilac, white tulips, azaleas, and lilies. The choir stalls were decorated with lilies; azaleas were on each side of the communion table; and the altar was decorated with lilies. The home of the bride's parents where the wedding reception was held was decorated in the various rooms; one, with Killarney roses and Adiantum Farleyense, another with American Beauty roses and the breakfast room with White Killarney. R. D.

Wreath on Easel.

SEE SUPPLEMENT WITH THIS ISSUE.

There is something very attractive about a wreath on an easel and it is a subject that should be more frequently used at funerals. One reason is that such a wreath can always be placed in such a position that it shows to good advantage, while other designs are lost in the general mixup so common on these occasions. The wreath illustrated was composed of bronze galax, lily of the valley, carnations and mignonette mounted on cycas leaves and, as will be seen, makes a very beautiful design. But without laying ourselves open to the charge of being hypercritical we think the wreath could have been improved by being set higher on the easel and by working the ribbon knot in on the bottom, where the carnations and the cycas leaves join.

But probably a floral artist is never really satisfied with even his best work. After having put his whole soul into the finest piece of work imaginable there is a twist to a flower he would have liked to alter at the last minute when it was being dispatched or he thinks that his ribbon is a little too heavy or too light, or the color not quite what he wanted. But he learns a lesson—or should—from his failures or partial successes that is useful to him in future. There are so many lovely combinations and artistic blendings possible in flowers that there is no such thing as finality. And this is well, for were there such, all interest in the work and all aspiration to higher levels would cease. The fact remains, however, that this kind of wreath is very telling and effectual, giving satisfaction in nearly all cases without being unduly expensive to make. S.

LOWELL, MASS.—The hearing on the bill allowing retailers to sell flowers on Sunday, scheduled for February 24, was held over.

ATTICA, IND.—J. B. Klaws, formerly of Crawfordsville, has accepted a position with the Attica Floral Co. Mr. Klaws is a skilful designer and the company is fortunate in securing his services.

CHURCH DECORATION BY H. G. EYRES, ALBANY, N. Y.

Reminiscences of C. F. Klunder.

When C. F. Klunder first entered the flower business on Broadway, New York, during 1872, floral arrangements were in what may be termed a rather primitive state. The stiff and severe style predominated, a fashion imported from Europe's leading floral establishments. In fact, there was very little that appealed to the artistic temperament, a temperament we naturally associate with flowers.

Bouquets and baskets were made by means of broom corn and sometimes even the clumsy conventional stick was used to assist in placing the flowers in this form. Mr. Klunder at once set about creating something that would take the place of this conventional way of arranging flowers. He then conceived the idea of the loose arrangement of flowers. His first attempt to introduce this started with bouquets to be carried at a large reception given by one of New York's fashionable set.

It was an unusual departure and created the highest comment from all present and brought him in the floral limelight. The style met with pronounced success, and through the loyal interest displayed by one of New York's 400 in Mr. Klunder's ability it became universally popular. This was the first step of success reached after a few months of American business experience, Mr. Klunder being a native of Germany and scarcely able to speak the English language when his successful career on Broadway started. The introduction of this loose arrangement brought about an evolution in the floral trade and became quite the rage. The loose effect was also much used for ceiling coverings, floral wall pockets, floral curtains, mantel designs, etc., down to the tiniest detail. It looked rather easy to imitate, but it was some time before Mr. Klunder's competitors had become inspired with the idea, and for a long time he stood paramount in his field. By this means his business grew to such proportions that he found it necessary to greatly enlarge his facilities for handling the enormous increase.

American Beauty roses at this time were very few—the leading rose being General Jacqueminot. Mr. Klunder contracted for and secured the monopoly on this rose: he made enormous profits on this deal, and often wrote his check in four figures. The particular grower with whom this contract for "Jack" roses was made during the busiest month received a check for $5,000 for flowers delivered. This at the time was the talk of the trade, and has been commented on many times since. It stands as a record breaker, and up to today has not been equalled by any one individual in the trade. It may not be amiss at this time to mention some of Mr. Klunder's achievements:

A brilliant masquerade ball was given by the Vanderbilts upon their entry into the social world, and the fulfillment of the floral decorations were entrusted to Mr. Klunder's good judgment. He was given carte blanche, which gave him every opportunity to display his artistic ability. The ballroom to be decorated was one of the largest and finest in the city at the time, and to secure the choicest and rarest blossoms it was necessary to corner the flower market for that day; every available bloom was bought up. Festoons of orchids in various original de-

signs were the dominating feature; in fact, only the very costliest flowers were used, and these in great profusion. Mr. Klunder received $10,000 for this decoration, and this is the largest sum ever paid for a single decoration by a private individual.

When the Cuttings were in their glory, the senior branch of the house gave a dance at Delmonico's, where the decorations again showed Mr. Klunder's ability to constantly create new ideas with the aid of his loose arrangement. Louis XIV styles were the features here and the decorations were in harmony with this period. French handle baskets were cut in two and arranged as wall pockets; these were connected with heavy garlands of loosely arranged roses and their foliage, the center of the garlands being considerably heavier with long sprays of roses extending to the floor. Violets and damask roses were the main flowers used, and the tout ensemble was a fitting tribute to the sumptuous days of Louis XIV.

Another meritorious decoration and worthy of comment was the New Year's ball given by the then popular society leader, Ward McAllister. Perhaps the hanging gardens of Babylon might have been wonderful for those days, but this was how a suspended ceiling of 17,000 square feet, which hung over the heads of the dancers at the ball and shut from view the dress circle and balcony of the Metropolitan opera house, was made: Cables of woven wire crossed in squares were covered with masses of green leaves and clusters of bright flowers and hung even with the dress circle railing just above the first tier boxes. The great chandelier which was lit above this arbor of greenery shone down upon the dancers beneath like sunlight through the forest of Arden. The two rows of boxes and those on the parterre were almost covered in curtains of smilax and roses, and those on the second row by tall palms and ferns, oranges and rubber plants, reaching to the ceiling of green. From the clusters of electric lights enormous balls of the rarest roses were suspended. The stage was set with great palms and ferns.

One of Mr. Klunder's greatest achievements outside of his several exhibitions was the bewildering success of the great centennial ball held at the Metropolitan opera house in May, 1889. The opera house was transformed into a bower of flowers. Special attention was given to the vestibules, which were converted into a spring-time garden of the colonial period. Not merely the flowers, but the plants and shrubs upon which they grew were here displayed in all the old time buds and blossoms; daffodils, hyacinths, tulips, violets and yellow primroses appeared in endless profusion, massed without any formal or geometrical design and strictly adhering to the loose arrangement. It had that charming lack of prim order which characterized some old-fashioned gardens.

Around the walls and vestibules and reaching up to the balustrades flowering shrubs, such as forsythias, lilacs, quinces and prunes, and here and there fruit trees, such as the forefathers seldom forgot to plant among their flowers, apples, pears, and, of course, some fine specimens of the immortal cherry tree. A smart hedge of garden box, which was nearly a century old, was used as a finishing touch. At the other entrances many different designs were employed. A plateau of green was laid, and on this rich green surface the geometrical design system was used; flowers in diamonds, circles, oblongs and other figures simple and complex, extended over the plateau. No two designs were alike. One was of all tulips, another of hyacinths, a third narcissus, and a fourth daisies. This was a more modern garden, and the narrow border was of daisies and dwarf shrubs.

The ballroom was a dazzling spectacle; the stage just before the curtain was a massive structure of Romanesque character, made entirely of flowers. From the floor it rose high in air, terrace above terrace; one terrace of red azaleas, the next of white azaleas, the third of blue hydrangeas, and then a repetition of this order up to the top. Each side of this gorgeous edifice of flowers was flanked by a gigantic palm from which

Livistonia Altissima.

arose a flagstaff bearing aloft the national colors. For a background to this blaze of color there was a cool green forest of natural pines, hemlocks and other large trees. A flock of 100 white pigeons were poised in air as if issuing from the fastnesses of the forest,—and the leader of the flock held in its bill a laurel wreath over the head of the president. The rest of the decorations were mainly plants in flower which were placed artistically in every available nook and corner.

The dinner table decorations consisted of hundreds of living plants in baskets, but no basket contained other than a single kind of flower. All the different hued pansies greeted the eyes of the guests, each hue separated from the others. Scarlet, pink and white geraniums, mignonette, heliotrope and callas formed blooming islets. The sides of the dining hall were deeply shaded with evergreens, shrubs and vines brightened here and there with huge hydrangeas, azaleas, daisies, roses and other brilliant plants; about 5,000 were artistically interspersed. The presidential table had a wealth of scarlet and white tulips and azaleas and blue hyacinths arranged upon a plateau of trailing arbutus, the whole floral decoration resting upon a great oval mirror six feet wide and ten feet long, and occupying the center of the long oval table.

Mr. Klunder's aim in his business was to interpret nature as closely as possible. In depicting nature and the flowers he so dearly loved, his best taste was displayed in a large dinner given by one of New York's society leaders to President Cleveland, where the decorations were all the choicest orchids arranged in the manner in which they grew in their native clime. It was pronounced by all present as one of the finest and most wonderfully artistic table decorations ever made.

Mr. Klunder gave various exhibitions from time to time during his career; the proceeds from nearly all of them were devoted to charity. His art and wonderful knowledge of the flower business have made a lasting impression in the field, and there are many of his staunch followers still living. The writer firmly believes there is not a man in the trade but who has not in some way or other heard of the many and noteworthy decorations and exhibitions given by C. F. Klunder. They stand as a kindly tribute to his memory. He was an ardent lover of the artistic in floriculture, and did much to elevate its standard.

ALMA E. KLUNDER.

FLORISTS' PALMS.

Commercial Palm Growing in Ghent.

The city of Ghent, Belgium, is noted for its enormous trade, especially its export trade, in palms, its sales of palms in America alone, in 1905, having been over $200,000. Thanks to the cheapness of fuel and labor, and to the specialization and perfection of methods, Ghent has attained and will long hold the supremacy in this line, says Revue de'l Horticulture Belge. A few words in regard to methods of propagation in use will be of interest to all growers.

Palms are generally raised from seed, which is sent to the market as soon as mature, and is planted at once, as palm seed retains its vitality but a short time. The germinating power varies with the species, some sorts germinating but 20 per cent or less, and others 80 or 90 per cent. Growers are generally satisfied with an average germination of 50 per cent. The seeds are unpacked very carefully, as they often sprout enroute, and the slightest blow will break the little rootlet, especially that of Cocos Weddelliana. A temperature of from 60° to 90° suffices for the germination of most palm seeds.

The sowings need constant and daily care; waterings must be made judiciously, keeping the seeds just moist, and avoiding equally too much moisture and over-dryness. Sowings are made in three ways: By single seeds in small pots; in pots, pans or flats, or in the open bench in the propagating house. The first method, were it not so expensive, would undoubtedly be preferable, but is only used in case of rare or delicate varieties. The pots are as small as possible and are imbedded in ashes on the bench; the seeds are lightly covered with soil, and, as soon as the first leaf is developed, air is given gradually, until at the end of a few weeks, the plants are placed on a shelf near the glass, in a warm or temperate house.

For the varieties with seeds of small and medium size (thrinax, geonoma, kentia, areca, etc.), 5-inch to 7-inch pots are generally used; they are first about half filled with broken pots, on which is placed the soil on which the seed is scattered, but scarcely covered, then sunk in coal ashes or fresh tan bark and placed under glass in the propagating house. The sprouted seeds are potted separately

when the radicle is one to two inches long, or later, when the first leaf is developed; the former proceeding is, of course, better.

Sowing in flats is most in favor for kentias; wooden boxes 25 to 30 inches long, 16 inches wide and four inches deep are pierced with many holes and covered with a bed of broken pots, then with soil, on which the seeds are placed and sprinkled with soil. These boxes are placed in a hot or a temperate house, usually under the benches, standing upon pots, near the pipes, at a temperature of 65° to 75°, at which temperature they sprout with great regularity and are potted as the shoot shows above the earth.

Sowing in beds in the propagating house is most preferable for wholesale growing; a layer 4-6 inches deep of finely sifted coal ashes or sand or other light porous matter is used. Sphagnum has been tried, but with poor results. The seeds are spread thickly, scarcely covered and pricked off into pots as fast as they sprout. Kentia, cocos and others are sown in this manner. In houses where sowings of 400,000 to 500,000 kentia, areca and cocos are made, the seeds are mixed with a little more than half their volume of heath soil (terre de bruyére) and sown in the propagating house to a depth of four to six inches; this necessitates very great care in watering and careful handling, and the potting of the seeds as they begin to germinate.

The potting of palms is a delicate task, requiring great care, and should take place when the radicle is less than an inch long (kentia, cocos, etc.). Latanias, thrinax and others with fibrous roots may wait longer. The pots should be as small as possible, well drained, and so filled that the sprouted seed at the top of the pot shall be at least half buried in the soil. The young seeds are then placed on a bench in the propagating house and covered until they develop the first leaf, after which air is gradually given, till in three or four weeks the young plants are placed on a shelf near the glass in a warm or temperate house.

Proximity to the glass is an essential to success with young palms, and it is best to leave them there as long as possible; one or even two years. The care is limited to frequent washing of the foliage and sprinkling with water and doses of liquid fertilizer. No haste need be used in repotting, for young palms do better in small pots; a little fresh soil with a little guano on the surface, is good. Repotting generally takes place about the end of the first year, and once each following spring, with a surface dressing or two during the summer.

A WELL GROWN KENTIA FORSTERIANA.

At the end of a year the young palms are sorted, the cocos, kentia, geonoma, etc., forming one group,—the latania, corypha, livistona, etc., another. The first group are left upon their benches, standing in ashes, and repotted as necessary. It is inadvisable to place them in tan bark, as they become too slender and less vigorous than those grown cooler. Two-year plants should have a minimum temperature of 60°. The plants of the second class (latania, corypha, Areca sapida, A. Baueri, A. lutescens, etc.) should be buried after the second year in a bed of tan bark 25 to 30 inches deep, and as near the glass as possible. Also, they may be given more frequent waterings with liquid manure and be more frequently repotted.

BENCH OF SEEDLING KENTIAS.

Notes in Season.

After the holiday rush is over the demand for palms lessens to some extent, though some good fresh stock is required from time to time in all first-class retail stores, for plants even more than some other lines of goods, are liable to become shop-worn. It is during this period, and up to Easter, that the autumn potted stock is likely to become especially useful, six and eight-inch kentias, some good latanias, Phoenix Roebelinii and good stock of Livistona rotundifolia being among those that are usually in demand.

And since the Christmas stock was disposed of, there is generally space to spare in the plant houses to clean up, set over, and generally rearranged the plants, giving the young palms space enough to spread out and assume their proper form. There is also time at this season to wage war on the insects, for in a crowded stock of plants there are invariably some colonies of insects to be found. Scale, thrips, and red spider are the particular kinds that are most troublesome and injurious, the brown and black scale on kentias being among the worst to contend with, owing to the fact that they multiply so rapidly, and also leave their mark upon the foliage if allowed to become established.

Whale oil soap, tobacco soap, nicotine solution, and some of the soluble oil preparations, have value in fighting these pests, the nicotine and soluble oil preparations being the most expensive, but doing the work when carefully used. Thrips is best controlled by frequent fumigations with nicotine paper, and in using this insecticide a somewhat larger amount may be given than is recommended by the makers. For example, 12 to 15 pieces of nicofume paper may be used in a house 25x100 feet, without any injury to palms, and this should be repeated on two or three evenings if there are many thrips in the house. These insects are most troublesome on arecas and kentias, but are by no means confined to those species. Red spider will attack almost any plant when given an opportunity, and the best way to avoid this pest is by giving vigorous syringing on every favorable opportunity, a good force of water directed under the foliage being the best remedy to apply.

Spraying with, or dipping in ivory soap solution has some value in fighting red spider, but if one syringes vigorously, keeps a moist atmosphere, and watches for the dry corners in the house, there is seldom much trouble from spider. An even temperature helps much in keeping this class of plants in good condition, a regular night temperature of 60° to 62° being much better for commercial palms in general at this season than to attempt to force them along at a higher mark. Livistona rotundifolia is especially susceptible to the attacks of red spider, and owing to the compact habit of growth of the young plants, it is not easy to get under the foliage when syringing. It is well, therefore, to examine these frequently, and also to set over and turn around the plants from time to time, in order to expose all the leaves to the water in turn.

Notwithstanding the fact that but little active growth is going on among the palms at this season, it will be found that they still take up much water from the soil, and that frequent and thorough waterings are required to keep them in condition, there being no season of the year in which a well-rooted palm needs to be kept dry at the root. Shading will soon be needed for few greenhouses are glazed with perfect glass, and one blistered pane of glass may do much harm to a number of plants when the sun gets high enough. About February 15, if the weather is bright it becomes necessary to put a light shade on the south side of the palm houses, but the north side may do without shade for two or three weeks longer.

W. H. TAPLIN.

THE CARNATION.

Notes in Season.

A very important detail is taking the rooted cuttings from the propagating beds, potting and caring for them. The cuttings for home use should be potted as soon as roots are well formed, it being much better for the future welfare of the stock that the cuttings receive atention as soon after rooting as possible. Cuttings intended for shipping will have to be left in the sand for a longer period to get more and hardier roots to stand the packing and travel. The first and most important need for this work is proper soil. At this period of their growth young carnation plants should not be treated to soil with very much manure in it or a soft growth will result. Growers who are situated so that they have to use a heavy stiff soil will, as a necessity to lighten it up, have to use a certain proportion of manure but it should be thoroughly well rotted and cured. Another important point is that of getting the soil in the best condition as regards moisture. It is a very great mistake to bring in frozen soil and use it directly after it has thawed out and still in a wet condition. It should at least be allowed to lay spread out long enough to get warmed through and dried out enough to be friable when handled.

When taking the cuttings from the sand we find it a considerable benefit to dip the roots in clear water which cleans them entirely of sand. This seems to stiffen the roots and put vigor into them so that very little wilting results from transferring them to the pots. The size of the pots that carnation cuttings should be potted in when taken from the sand depends greatly upon the temperature they will be subjected to and the treatment which they will receive after potting and, here is where experience and careful study is working out many of the problems that appeared so difficult a few years ago. Alluding first of all to the rust, which was then so prevalent on nearly all establishments now a batch of rust infested plants is an exception among up-to-date carnation growers. Not half the moisture is applied to the young stock or the flowering plants either by syringing or watering at the roots as was the case even three or four years ago, and this has much to do with the freedom from rust. By close watching of the temperature and the regulating of the ventilation it is wonderful what a small amount of water the young carnation plants while growing in small pots will require and still build up sturdy, healthy plants fit for any method of after culture.

The ideal treatment, after they have taken fresh root in the soil, is to give them plenty of light, ample ventilation without chilly draughts, a night temperature around 45° with a rise of but a few degrees by artifical heat during the day, a dry atmosphere about the house and water at the roots only as they require it to prevent wilting. It is a mistaken idea to drive the young plants directly from the potting with the object of getting a large plant and being able to top two or three times for planting out in field. There is bound to be a short period just before the time for transferring to the field when a considerable check takes place unless a shift to a larger pot is given them. Pot now into 2¼-inch pots; grow naturally in a cool temperature without forcing, paying particular attention to keeping them free from insects and the young stock will be a pleasure to all concerned. Directly after potting give a good watering to settle the soil about the roots. After this water sparingly, or only as the plants demand it. While thinking of potting carnation cuttings the question presents itself of the incoming stock of new varieties that are being shipped in. First of all, it is the purchaser's right that he receive 100 strong, healthy, well-rooted cuttings for every 100 ordered. If they are not so, return them whence they came. It is poor policy to accept a shipment of a novelty or any variety when it is necessary to put five or six, sometimes more out of every bunch of 25 back into the sand to get roots on them. When the shipment comes to hand they should be taken out of the box at once, the roots dipped in water that has had the chill taken out of it and then potted. It will be necessary to shade these plants longer than home grown stock after potting for them to recover from the effects of travel. C. W. JOHNSON.

WASHINGTON, D. C.—W. R. Smith, superintendent of the National Botanic Gardens, who has been under treatment at Providence hospital for five weeks, has completely recovered and has assumed his duties again.

ALBUQUERQUE, N. M.—The Albuquerque Floral Co. has filed incorporation papers, the capitalization being $25,000. The incorporators and directors are: Arno E. Huming, Frank H. Strong, Roy S. Elwood, C. W. Taylor Goodman, Creighton M. Foraker, Peter K. Scheck, and John F. Pierce. The company will engage in the business of raising and selling flowers and plants.

THE ROSE.

IN England they still call Marechal Niel "the queen of roses."

BRIDE and Bridesmaid roses will not be grown by many of the rose specialists this year, as it is claimed they do not pay.

Rose Cardinal.

Cardinal, the fine red variety figured herewith, is a grand summer rose. It is good all the year round in fact, the roses from which our illustration was prepared having been photographed February 4 of this year. But during the dark days of winter when it is impossible to give air as freely as in summer the color is not so good. Richmond is, of course, a grand color, but in summer the flowers have to be cut so tight that they are useless for some kinds of decoration. Cardinal, on the other hand, may be cut fairly open in summer and the flowers come large and of a beautiful deep red. It is a disputed point as to whether roses, for summer use only, pay for the room they take up, but when a variety produces such excellent flowers as Cardinal does all winter in addition to the choice stock in summer, there should be room for it, and one wonders why it is not more grown. The flowers illustrated were grown at the Poehlmann Bros. Co.'s plant at Morton Grove, Ill.

Notes in Season.

Now that we have longer days and more sunshine, it may be noticed that the plants have responded to the improved weather conditions. Usually at this time, one will notice new wood forming or springing into growth, from wood that seems dormant and the plants show a tendency towards renewing their growth, so to speak. This indicates a renewal of the root action and if one carefully examines the soil small white fibrous feeding roots will be discovered. Now, unless these tender roots are protected, and we might add encouraged, their feeding power will be destroyed as they are usually near or quite at the surface of the soil which dries very rapidly and for this reason a topdressing or mulch should be applied. We prefer well rotted cow manure for this and one can put on a layer about an inch deep without doing any harm through over feeding, being careful not to pack the manure; at the same time it should be well broken up before applying.

To be able to apply the mulch easily, it will be essential to first tie the plants and clean them thoroughly; remove any loose manure that may be left from a previous mulch and there will then be nothing in the way to retard the work. We have often seen ground bone or bone flour used before putting on the manure, and have used this method and watched the results carefully, but have failed to note any improvement over the results obtained from using the manure alone. In fact, on several occasions the bone meal has had a detremental effect on the roots, owing perhaps, to some acid used in the manufacture of the bone, that is, something not contained in the analysis of the bone. If one can obtain bone shavings or ground bone, this makes an excellent fertilizer to spread over the soil before applying the mulch and it can be used with perfect safety.

Now, very often one may not have just the proper manure for mulching, it may be green manure in fact, and in this instance, the grower will have to exercise a little more care in using it. A good plan would be to place a ridge of the green manure across the beds between the rows. Try and arrange to be able to give the soil a good watering the day after the mulching; in this way some of the strength will be taken out of the manure and it will go where it will do the most good. Follow up the watering with a thin layer of fresh soil spread over the manure, otherwise the foliage, also the flowers, will be badly spotted though the action of the fermenting manure. This is one of the drawbacks when using green or fresh manure and only by the use of a top dressing of soil can the injurious effect of spotting be eliminated. Within a week or so, the mulch should be gone over by hand and the surface broken up, otherwise the evaporation of the soil will be extremely slow as the manure becomes a regular blanket excluding the air in a marked degree. Of course, the work of watering after mulching will require more care and one must look out for the dry corners and bottom soil where the benches have bottom heat. Again, one must have a care that the plants do not get an overdose of water.

Give the rose houses all the air possible from now on, avoiding draughts, of course, and this will increase the evaporation. The above suggestions for mulching are intended to encourage the growth of healthy, vigorous plants, able to take the extra feeding. If one has a lot of plants in a feeble or over-forced condition, to mulch them or to feed them in any manner would have a tendency to put them out of commission entirely. Plants in this condition should have at least a short rest; run them on the dry side, but syringe frequently, and when they begin to make new, healthy growth, it would be advisable to use a weak solution of manure water until they are able to take the extra feeding contained in a good mulching. This must be left to the intelligence of the grower, and for successful results water carefully, ventilate with care and maintain an even temperature in the houses. A crack of air on the houses at night for the first three or four nights after mulching will be beneficial.

E.

Feeding Roses.

ED. AMERICAN FLORIST:—

I have been growing flowers for the local trade for a few years, but there are two points that I have not been able to get definite information in regarding the growing of roses, viz., feeding and the removing of blind wood. I read the trade papers carefully. Will some correspond tell me, not what to do, but just what he has done this present season to his own roses in these two regards?

Connecticut. B.

Replying to "B" will say that we grow the standard commercial varieties of roses and we usually apply a light mulch of well-rotted cow manure about October 1 to keep the top of the soil in good condition. About November 1, we begin with the manure water and for the first two or three weeks we do not use it full strength. After that we make it full strength, using nothing but grain-fed cow manure and a good grade of sheep manure alternately about every 10 days, as we try to give them a good watering with fresh water between times. About February 15 we apply a good mulch of half-rotted cow manure, and in about two weeks continue with the liquid manure. Another mulch about the second week in April is about all the feeding we give until the plants are thrown out, about the beginning or the middle of June. As for pruning, we do very little. Now and then we remove a little twiggy growth or cut back some blind growth, but never very much pruning is done at one time. We like to have our plants carry all the good foliage they make. If "B" had regularly read the suggestions pertaining to rose culture in the AMERICAN FLORIST, he would have found them a great help, I am sure.

Rose Cardinal.

ROSE CARDINAL.

ORCHID NOTES.

REPOT Lælia anceps as the plants go out of flower.

WATER Cypripedium insigne freely and top-dress or repot any plants needing this attention.

GIVE new compost to Zygopetalum Mackayi: this is one of the strongest feeding of the pseudobulbous orchids.

AVOID too much atmospheric moisture when deciduous dendrobiums are advancing for flower or many of the buds will produce new growths instead of flowers.

THE sawed end of a block of poplar or basswood is excellent for sowing seeds of orchids on. Never use oak as it contains an acid that is fatal to the young plants.

PLANTS that had the rhizomes partly cut through in fall as advised and are now rooting on each side of the notches may be severed and potted separately if this is intended or top-dressed before the new roots make much headway.

Notes on Commercial Orchids.

CATTLEYA PERCIVALIANA.

Cattleya Percivaliana comes into flower as labiata is on the decline; it is a pretty little cattleya, but owing to its odor it is never in great demand. Coming into flower, as it does, when orchids are scarce the flowers can generally be disposed of at a fair profit, so it is a necessity for the growers of commercial orchids. From two to five flowers in a sheath are produced very freely from small plants, which well repay for the space occupied if grown right, and to do this a winter temperature of not less than 55° on cold nights must be maintained. A rise of

10° or more from fire heat during the day is necessary for good results; if grown cooler this causes many flowers to rot in the sheath, besides retarding the flowering season. Similar culture to that described for C. labiata suits it well, only C. Percivaliana requires a greater time to produce its flowers after maturing the present season's bulbs, which, if left on them for a time before being cut, increase both in size and substance, making them sell better. With careful management this cattleya may be brought into bloom in November and December, or just in advance of C. Trianæ; if the grower does not succeed in getting it in flower before the latter there is little chance of disposing of the flowers at any price, for C. Trianæ, being next in line, holds sway for quite three months (from December to the beginning of March).

C. TRIANÆ.

C. Trianæ is a very popular cattleya and perhaps the most profitable to grow, though, to many growers, it proves the most disappointing of all cattleyas, as fine sturdy looking bulbs often fail to produce a bloom or have one or two flowers only in a sheath, while other bulbs, not so strong to look at, will have three, four, or five flowers in a sheath. This only shows that the cultural methods of many orchid growers are not quite perfect, while those who are masters of this cattleya do not tell all they know about it. Still the explanation is simple enough. It may not have occurred to all orchid growers that if C. Trianæ flowers in its native habitat, which is near the equator, at the same time of the year that it does under cultivation, it must certainly enjoy what we know as midsummer weather in its natural haunts. So it looks as if C. Trianæ, under cultivation, is grown too cool at the flowering season, and it is quite reasonable to expect that more heat and a little drier atmosphere, just before, and during the flowering season would overcome the trouble mentioned above, and bring better results for the general run of orchid growers. This has been our experience in practice and it may well be illustrated with the methods followed by some orchid growers just before the holidays when prices for cut flowers are expected to reach the top notch; they will put on more heat day and night to bring out all the flowers possible, and, if the weather should be cold and bright, it is wonderful how quickly they will respond to the change by pushing up fine long stems with flowers of good substance; after the holidays there comes a slump and the demand for orchids usually drops, then the grower suddenly shuts off the extra heat with the very erroneous idea of keeping them back till the demand for flowers is better, much to the detriment of both plants and flowers. The result of this treatment is generally seen by the thin, starved, short-stemmed flowers that appear for a time till nature brings relief with the warm sunny days of February.

CATTLEYA TRIANÆ.

C. SCHROEDERÆ AND OTHERS.

A little observation and attention to slight details such as the above will often overcome serious difficulties for the orchid grower. It is poor policy to try to retard any cattleya by keeping it cool before the flowers burst out of the sheath; it is much better to give every encouragement till the flowers are developed then place them in a comparatively cool and dry house, where it is surprising how long they last in good condition. The same general treatment indicated for C. labiata during the growing season answers admirably for C. Trianæ and the same may be said of C. Schroederæ, which follows C. Trianæ keeping up a succession of flowers till the end of March. This is much paler in color than most cattleyas but makes up for this by the pleasing odor; it is a good grower when first imported, and, by attention to potting at the right season, there is not the slightest reason why it cannot, with the majority of other cattleyas, be grown indefinitely if common sense is used.

If a grower has only one large house for cattleyas and does not feel justified in giving up two for this purpose, it will certainly be to his benefit to put a partition in the middle of it, to divide what may be called winter flowering species from those that flower in summer. The localities from whence they are collected are said to be hundreds of miles apart, and to bring them all together and grow them in one house requires far more attention than if they are kept separate. True, they can be, and are, grown with considerable success by some growers all together, but it entails more unnecessary labor than can be well described. In the first section C. labiata, C. Percivaliana, C. Trianæ and C. Schroederæ will do, at the warmest end of the house; these on the stages, with C. speciosissima hung on the roof will give a continuous supply from August to March. C. speciosissima, is known as a shy bloomer; it is a beautiful large type of cattleya, often flowering twice a year under certain conditions. Do not water it with the hose when suspended from the roof, as in the growing season it will never get enough water. It will pay to soak the plants well in a tub when dry, but always let them get dry before doing so. Under this treatment it will flower as satisfactorily as any cattleya.

W. DICHROS.

Two Useful Orchids.

The accompanying illustration shows two very useful and beautiful orchids—both too well known to need detailed description—Cœlogyne cristata and Dendrobium Wardianum. They were grown by Thos. F. Eastwood, gardener to Mrs. D. M. Osborne of Auburn, N. Y., who says: "The dendrobium is growing in a 5-inch pan and the best growths are 4 feet 7 inches in length, showing that suitable atmospheric conditions are chiefly important in the culture of these beautiful epiphytes." With this we quite agree and we have frequently pointed out the futility of using large receptacles for the deciduous dendrobes.

Boston Co-operative Flower Show.

The annual exhibition conducted by the Boston Co-operative Flower Growers' Association, otherwise and better known as the Park Street Market, was held at Horticultural Hall, Boston, Mass., February 27-28. The exhibition

CATTLEYA PERCIVALIANA.

was a huge success in every way and far exceeded the best anticipations of the committee in charge, which had carefully arranged the details leaving no stone unturned to suit the convenience of both the exhibitors and the public. This being the first time the exhibition has been held outside of the association's premises, the immediate approval it met with from the public in general has determined without a question the feasibility of annually holding the exhibition in this spacious building. At the opening at 2 p. m. on Saturday a multitude of enthusiasts instantly took possession until the closing hour at night. Again on Sunday on opening the doors the hall was quickly thronged with people who delight in these exhibitions and during the afternoon and evening many thousands took advantage of viewing the splendid display of mid-season flowers in their prime. No admission fee was charged, the show being open to all. The publicity bureau in charge was amply satisfied with its advertising efforts.

The object of this exhibition was primarily for the commercial growers' interest, their exhibits far exceeding those of the private growers who so willingly co-operated. Everything in a commercial grower's line was staged from the leading plant specialties down to the smaller novelties. Boston, "the home of carnations," was never more proud of its display, the equal of which in this line has never been staged in this city. It occupied the center of the main hall and was admirably staged to the advantage of both flowers and observers. Next in importance, although not nearly so extensive, was the rose section, where were seen the finest varieties in superb form. Competition for honors was decidedly keen, the judges selecting the winners only after the closest inspection and comparison. No less attractive and interesting were the violet and sweet pea exhibits which for varieties and superior cultivation have never been equalled.

A rare exhibit of cyclamens, including fancy varieties of the highest type, created no end of admiration, and bulb stock, embracing every variety known, was accorded particular favor. From the store-keepers come a fine display of fancy baskets of all varieties of flowers. The prizes offered in these classes were carefully awarded. Bouquets of various sorts and several dinner-table decorations completed the unique display. The prizes subscribed were somewhat different from the usual awards and were principally cut glass, serving as far more useful and artistic prizes than the time worn silver ornaments. This step was readily appreciated and it is hoped has come to stay. The morris chair subscribed for by the market salesmen was a thoughtful prize and will long be cherished by the winner.

Albert Roper's Bay State, was the leading attraction among the carnations, which included numberless varieties, prominent exhibits being made of Afterglow, Dorothy Gordon, Beacon, Winsor, Ruby, White Perfection, Enchantress, Alma Ward, Lawson and many others. This was the first opportunity for the local growers to see Bay State in its prime and it was returned the best vase in the show, beating out Alma Ward and Dorothy Gordon. Beacon outshone all other red varieties, many growers competing for the honors. This display was one of the largest of any single variety and safeguards the position already attained by this wonderful carnation. Afterglow and Winsor were foremost in the pink carnation exhibits, and were staged in unusual condition. Among the out-of-town exhibits were those of the F. R. Pierson Co., of several new seedlings which were not for competition. Baur & Smith of Indianapolis showed a vase of Shasta White of especial interest.

American Beauty, Richmond, White Killarney, Killarney, and My Maryland were the prime favorites among the roses, W. H. Elliott and the Waban Rose Conservatories being the principal exhibitors. Bride and Bridesmaid were shown in remarkable condition by the Montrose Greenhouses. Perle, Isabella Sprunt, Bon Silene, Safrano and Rhea Reid all received recognition from the judges for their extraordinary form. A. N. Pierson of Cromwell, Conn., was awarded first for mixed roses, entering a superb assortment of varieties. S. J. Rueter of Westerley, R. I., received first honors for My Maryland.

William Sim staged a collection of winter sweet peas that has never been equalled, including the pick of the Zvolanek varieties, shown in their true form. This grower scored again with his new violet, Kaiser Wilhelm, shown for the first time and admired by all. Estey Bros. led a field of 11 competitors for first honors and showed a rare quality of Princess of Wales. H. M. Calder, with his Lady Campbell, led the growers of double varieties; following closely was H. M. Sanderson's Farquhar. Thomas Roland presented an enviable attraction in his display of wonderful cyclamens, superior to anything ever before exhibited in this hall. This display was awarded the prize for the most meritorious display in the hall and everywhere the award was instantly approved. Sydney Hoffman won first honors for table decoration of violets. Henry Penn being second. The basket and centerpiece competition brought out

TWO USEFUL ORCHIDS.

Cœlogyne Cristata, (On Left); Dendrobium Wardianum, (On Right).

a large display, F. E. Palmer of Brookline winning first in both classes. The following is the list of awards:

CARNATIONS.

Fifty white.—F. R. Pierson Co., Tarrytown-on-Hudson, N. Y.; W. Nicholson, Framingham, second.

Fifty flesh pink.—P. Fisher, Ellis, first; S. J. Goddard, Framingham, second.

Fifty light pink.—F. R. Pierson Co., first; M. A. Patten, Tewksbury, second.

Fifty dark pink.—F. R. Pierson Co., first; S. J. Goddard, second.

Fifty red.—Cottage Gardens Co., Queens, N. Y., first; M. A. Patten, second.

Fifty crimson.—W. Nicholson, first; W. Wheeler, second.

Fifty variegated.—W. Nicholson, first; M. A. Patten, second.

Twenty-five white.—Le Moine Bros., first; F. R. Pierson Co., second.

Twenty-five flesh pink.—Le Moine Bros., first; M. A. Patten, second.

Twenty-five light pink.—Le Moine Bros., first; F. R. Pierson Co., second.

Twenty-five dark pink.—M. A. Patten, first; C. S. Strout, Biddeford, Me., second.

Twenty-five red.—Le Moine Bros., first; A. Bateley, second.

Twenty-five crimson.—E. Winkler, Wakefield, first; Le Moine Bros., second.

Twenty-five variegated.—M. A. Patten, first.

One hundred blooms in vase, not less than six varieties.—Pierce Bros., Waltham, first; F. R. Pierson Co., second.

One hundred blooms, one variety.—A. Roper, Tewksbury, first; Cottage Gardens Co., second.

Peter Fisher's prize for best 50 Beacons.—W. Nicholson, first.

Peter Fisher's prize for best 25 Beacons.—C. S. Strout, first.

Cottage Gardens Co.'s prize for 50 Beacons.—S. J. Goddard, first.

R. Witterstaetter's prize for 50 Afterglow.—F. R. Pierson Co., first; W. Nicholson, second.

F. R. Pierson Co.'s prize for 50 Winsor.—Pierce Bros., first; C. S. Strout, second.

Twelve blooms unnamed seedlings.—Peter Fisher, first; F. R. Pierson Co., second and third.

One bloom, white.—Pierce Bros., first.

One flesh pink.—Pierce Bros., first.

One light pink.—Pierce Bros., first.

One dark pink.—F. R. Pierson Co., first.

One red.—Pierce Bros., first.

One crimson.—S. J. Reuter, first.

One variegated.—A. Roper, first.

ROSES.

Twenty-five American Beauty.—Waban Rose Conservatories, Natick, first.

Twenty-five pink.—Montrose Greenhouses, first with Bridesmaid.

Twenty-five red.—W. H. Elliott, first with Richmond.

Twenty-five white.—Montrose Greenhouses, first with Bride.

Twenty-five any other.—W. H. Elliott, first with Perle.

Fifty mixed.—A. N. Pierson, Cromwell, Conn., first; Montrose Greenhouses, second.

Park St. Market prize for not less than 10 nor more than 30 blooms of best new rose undisseminated before 1909.—Waban Rose Conservatories, first with White Killarney.

SWEET PEAS.

Wm. Sim, Cliftondale, won all the sweet pea prizes, including those for 100 pink, light lavender, deep lavender, any other color, best new variety and the Zvolanek prizes.

VIOLETS.

Best Campbell.—H. M. Calder, first.

Any other double.—H. M. Sanderson, first with Farquhar.

Best Princess.—Estey Bros., first.

Any other single.—W. Sim, first with Boston.

Best display Boston. Wm. Sim prize.—S. Hoffman (table decoration).

Best new single violet.—Wm. Sim, first with Kaiser Wilhelm.

MISCELLANEOUS.

Fifty tulips.—T. J. Butterworth, first.

Fifty narcissus.—Mrs. A. S. Fraleigh, first.

Twelve varieties bulbs.—Mann Bros., first.

Fifty lily of the valley.—H. M. Robinson & Co., first.

H. F. Michell's prize for 12 pots of Easter lily.—Pierce Bros., first.

Page Pottery cup for 12 cyclamens.—Thos. Roland, Nahant.

Fifty marguerites.—W. Nicholson, first.

Twenty-five mignonette.—W. Nicholson, first.

Two hundred pansies.—C. W. Ward, first.

Twenty-five antirrhinum.—W. W. Edgar Co., first.

Basket of 100 carnations.—F. E. Palmer, first.

Bride or bridesmaid's bouquet.—Henry Penn, first.

Mound for table.—F. E. Palmer, first.

SPECIALS.

W. W. Edgar for plants, $15.

A. Leuthy for plants, $15.

Thomas Roland for plants, $10.

F. R. Pierson, $10.

Martin Sullivan, $5.

T. T. Watt for orchids, $5.

Ed. MacMulkin for plants, $10.

Mann Bros. for Easter lilies, cut, $3.

The judges were S. J. Reuter, Thos. Roland, A. H. Fewkes, E. A. Wood and A. H. Lange. The following were among the visitors present: F. R. Pierson, W. J. Manda, R. M. Fotheringham, S. S. Skidelsky, A. Zvolanek, A. N. Pierson, Martin Reukauf. B.

THE BOSTON CO-OPERATIVE FLOWER MARKET.

The Flower Divine.

BY THE LATE L. E. MARQUISEE.

Read by H. M. Altick at the close of the banquet to the visitors attending the Indianapolis, Ind., convention of the American Carnation Society, January 28, 1909.

Let others rehearse
In prose or in verse
The praise of their favorite flower.
Its beauty of form,
Its color, its charm,
Its fragrance, its richness of dower.

Let others disclose
The charms of the Rose
And call it the queen—e'er to reign.
Let them fondly declare
There is nothing so fair
In Flora's enchanted domain.

God made the wild roses—
Their beauty discloses
A glimpse of that Beauty Eternal
Whence the beauty of earth
Had its origin—birth.
As well as the beauty supernal.

God co-worked with man
(This is nature's true plan)
And that marvel of beauty is ours
Which dull, sober prose
Calls simply a rose.
But is God's benediction in flowers.

The Violet's hue,
Forget-me-not's blue
Many others entrance and inspire;
The Orchid's rare form
Its tints soft and warm
The Salvia's marvelous fire.

Let others declare
The Lily so rare
Of purity emblem and sign;
The Snow-drop as white
As the stars of the night,
The Daffodil's burst of sunshine.

Let others, too, raise
The Goldenrod's praise,
Which showers its wealth of rare gold
On mountain, in glen,
O'er moorland and fen,
O'er meadow and prairie and wold.

It margins each lake.
Stream, forest and brake;
It vies with the sun in its glory;
The artist's fond theme.
The lover's sweet dream.
It is famous in song and in story.

It marshalls its forces
From mystical sources
And distributes them over the plain;
In ambush, in valleys,
By the river it rallies,
Its pickets watch over the main.

A ravishing vision
Of fair fields elysian,
Of dear Mother Earth e'er she closes
Her eyes for the sleep
Of winter, long, deep,
When she dreams of the lilies and roses.

'Tis the sun's good-night smile
On his earth child, the while
He tucks her up snugly in bed,
To sleep till the spring
Her Blue Bells shall ring
And wake her as one from the dead.

Let others, then sing
And make the air ring
With praise of their favorite flower;
Anemone, Rose,
Or Orchid which shows
The beauty of God and His power.

But in her dear soul
Rolled up like a scroll
The beauty of God was concealed;
It needed from man
The touch of his hand
And Beauty Divine was revealed.

'Tis the story oft told
Of the maiden of old
Asleep through the ages 'tis said,
Till the prince's fond kiss
Awoke unto bliss,
To life, love and beauty the maid.

The story means this—
Man's touch is the kiss
That woke from its dream of ages
Our Flower Divine,
Whose beauty benign
Is the theme of the poet and sages.

Though lowly his birth
From clods of the earth,
Man is a co-worker with God,
And by gracious selection
He has brought to perfection
Our Flower Divine from the sod.

I sing the Carnation.
Exalted its station
It rivals the orchid and rose,
Its beauty delights us,
Its fragrance invites us,
'Tis the peer of each flower that grows.

I sing the Carnation,
Exalted its station.
The prince of all flowers of the field;
No flower is more fair,
No flower is more rare,
And to none will the palm ever yield.

I sing the Carnation
The fairest creation
Which Nature Divine hath e'er made
On prairie or mountain,
By streamlet or fountain,
In valley or forest or glade.

I sing the Carnation
The pride of our nation,
Tho' ours by adoption alone.
This daughter of Flora
As fair as Aurora
Hath entered our hearts—is our own.

I sing the Carnation
Now regal its station
And royal the homage we bring;
The Rose may be queen,
The Carnation I ween
We'll crown with due honor the King.

O, beauteous flower! surpassing fair!
What art thou, what thine essence rare?
Art thou in this enchanting guise
Some spirit from supernal skies,
Strayed from elysian land of bliss!
A doomed exile now is this?
Hast thou a soul that thinks, feels, hears?
And hast thou pleasures, hopes and fears?
Hast thou a throbbing heart and warm?
What mould exquisite cast thy form!
What rare alembic all divine
Distilled such odors sweet as thine?
Or hath some spirit from above
Bent o'er thee whisperings of love,
And are these hues that light thy cheek
Thy answering blushes? Fair thing, speak!
And hath this angel bolder grown
Ere back to heaven it hath flown,
In love's sweet ecstacy of bliss
Implanted on thy lips a kiss
That thus thy breath's ambrosial sweet?
Ah! roguish elf, Ah! pretty cheat,
Thou'rt caught at last, thy secret's bare
Of breath so sweet and blushes rare.

OBITUARY.

Edward V. Hallock.

"Green grows the grass above thee
Thou friend of my better days,
None knew thee but to love thee
None named thee but to praise."

E. V. Hallock died March 2 in New York of apoplexy.

Elsewhere are expressions from representative men in American horticulture indicating the honor and affection in which he was held by all who knew him.

Mr. Hallock was undoubtedly the best informed man in the world in the specialties of gladiolus, lilies, and forage crops, and this information extended to the minutest cultural details, the preparation of the soil, cultivating the crop, and those successive steps through to its winter storage. His essay read before the seed division of the Columbian horticultural congress at Chicago in 1893 on the varieties of vegetable seeds required in the various metropolitan markets of America showed intimate knowledge of, and a broad view of the seedsmen's work. His general knowledge of the varieties of flower seeds, shrubs, trees, grasses and forage plants for the southern states included the widest possible range of general information regarding propagation and culture of all these items.

Mr. Hallock, in this article, does not take the credit to which he is justly entitled, for breeding, cultivating and selecting from a small beginning, the strain of gladioli now known as Childsii. After giving 17 of the best years of his life to this work he found it necessary to dispose of the thousands of seedlings before the strain was named, thus losing for himself an international honor in horticulture to which he was rightly entitled,—the giving of his name to this very valuable section of gladioli. This disposition of them just before they were ready for world wide introduction, cannot have been other than one of the bitterest possible disappointments to him, and yet his best friends never even heard him mention this side of the matter, much less complain. His firm, consisting of his father, V. H. Hallock, and himself, in about 1890 carried on a most extensive wholesale American and export business in gladiolus, tuberose bulbs, lilies, and in all other bulbs for the horticultural trade.

He was appointed director of the S. A. F. by President Vaughan, January 1, 1905, and was re-appointed by President Traendly, January 1, 1908, to fill the vacancy on the executive board, occasioned by the latter's election as president.

He was elected president of the New York Florists' Club, December 14, 1908, which office he held at the time of his death.

AN AUTOBIOGRAPHY.

The following account of Mr. Hallock's life and his drift into horticulture was dictated by him to the editor of this paper just four years ago, January, 1905. Since that time his activities and public work in florticulture and horticulture have been well known. Mr. Hallock as chairman of the S. A. F. committee on school gardens, and in many ways as a director of the society has set a high mark.

In giving this Mr. Hallock modestly and characteristically wrote as follows:

"I was afraid that somebody would put in something foolish so I have given you a little outline of the part of the earth I have covered during the little sojourn here. It will give you a little data to go by if it is necessary to put anything in.

"Born 54 years ago in Dutchess County, New York. Spent the first 19 years of my life with my parents. For five years attended the Friends' seminary at New York and the Adelphi academy, now Pratt institute, of Brooklyn, N. Y. Went to California in the fall, 1869, to look into a proposition a prominent Californian was anxious for my father to become associated with him in; which was to dyke and reclaim the salt meadows and marshlands adjoining San Francisco bay; from San Mateo to San Jose. Nothing ever came of this scheme, but today it is as sound as gold. For three years I was connected with the Southern Pacific railroad. Returning east, we succeeded to the business of C. L. Allen, who had bought the farm at Queens some years before.

"For the pleasant recollections and associations of my early life I owe to the love of horticulture and agriculture, and pleasure of the cultivation incidental thereto. I owe all to my father, as he was a cultivator of rare ability, and he often entertained the most prominent men in horticulture, agriculture and stock raising then in the country, and he followed all these lines with considerable success. In the fifties, we grew the Antwerp raspberry, Lawton blackberry, asparagus, and Isabella grape, for the New York market. As I look back, I can see what a wonderful opportunity we missed. Except notices in the horticultural press of that day as items of news and information, we never advertised a line, and there was a fortune in either the Antwerp raspberry or the Lawton blackberry.

"These plants were new at this time, and the stock was almost entirely in the hands of our family. The plants of both were very high. We received one order of $600 for Lawton blackberry plants, and shipped them in one bale in a light one-horse wagon. Antwerp raspberry plants were equally high, and much sought after, as the fruit at that time was bringing very high prices in New York.

"I remember about this time, we received a large order for blooded stock from Mobile, Ala., and they had to be all crated and sent in a sailing vessel. In 1851 my grandfather was awarded first prize for Cotswold sheep by the American Institute fair, held in Castle garden. My father for many years took a great many first prizes at the New York state fair for this breed of sheep. For many years he owned one of the finest farms of 500 acres in Dutchess county, and sold it during the civil war, in which he was much interested, to George Allerton, then owner of Bull's Head, N. Y. In 1864, we bought the original bulb farm, which we still own at Queens, L. I. For five years it was used for market-gardening; sold to C. L. Allen in 1869, and came again into our possession in 1875. In 1867 or '68, we grew the Early Rose potato, when it was first sold in the New York market for edible purposes, having bought some 10 or 20 barrels from B. K. Bliss & Sons, for, I think, $40 per barrel.

"From 1875 to 1892, I labored diligently to build up the trade and stock of bulbs and plants I sold to John L. Childs in 1892; the most complete and valuable stock of bulbs ever got together. When we first took hold of the business, there was no complete stock of gladiolus in this country, Geo. Such, at that time, having the best collection. We soon bought out Mr. Such, imported quite largely every variety of gladiolus then grown and, when we sold, we were growing some 1,500 varieties, in connection with the most complete and best stock of lilies ever got together. We bought the entire stock of what is known as Gladiolus Childsii, something over 50,000 bulbs, also all bulblets and seed. I purchased this stock by cable upon the recommendation and truthful representation of the originator of this strain, Max Leitchlin, of Baden Baden, and I consider it today the best of all breaks ever made in the gladiolus. Many of the best and most valuable varieties, now used and catalogued, were raised by us, but strange to say, few of the sorts we considered good enough to put on the market as high-priced novelties, although they out-classed most of the French varieties of that day. Augusta and Octoroon we never considered of great value, but today are called among the best. In fact, our American varieties seem to have great staying qualities. Snow White we bought near Boston, grew it nine years, and sold over 50,000 bulbs the first year it was put on the market. It always grew well with us. U. S. Grant I consider the best gladiolus I ever raised; Lilium Opal, was raised on our place from one bulb, and when sold to John Lewis Childs, he had several thousand of the different sizes. This is the finest of all the Speciosums. For the past few years, have not been actively engaged in horticulture, being interested considerably in Long Island real estate, which I believe has a great future."

To Be Done Now.

IN THE GREENHOUSES.

Keep tomato plants hard and vigorous from the start by keeping up a good circulation of air about them and a good light.

Nothing is gained by taking off chrysanthemum cuttings before they are large enough to make good stock.

Never allow old bulb flats to lie around with the soil and bulbs in them. Throw out the rubbish and stack up the flats in a shed until needed.

Be careful not to overpot palms. It is safer and better to feed than to give too much soil.

A good top dressing of manure is in order now for the benches of American Beauty roses where plenty of buds are setting.

For rose grafting avoid very soft or pithy wood on the one hand and hard dry wood on the other.

Avoid overfeeding carnations directly after the plants have been cut hard for the supply of cuttings.

Keep the plants of stevia up in a good light until the required number of cuttings has been secured.

Dry poinsettias off gradually, as the plants will produce more and better cuttings this way than if suddenly deprived of water.

OUTDOORS.

Save any rough mortar or lime rubbish that may be at hand from building operations for mixing with cucumber, tomato or lettuce soil.

No concrete work should go on when the day temperature is below freezing point. Frost will not injure dry cement or concrete after it is set, but as long as there is moisture in it the mass must be protected.

Watch frames in which evergreen cuttings are rooting. The sun is getting more power and soon heats up the small amount of air space between the glass and soil to the detriment of the stock.

In warm localities radishes may be sown on the early borders where they may be protected later.

Look over all young trees and remove any ties or other supports that may be "growing in" to the bark.

Clean off and burn all protective material around fruit tree stems, replacing with new; this will destroy many injurious insects and their eggs.

ERIE, PA.—Harry A. Neuner, who formerly had charge of the rose houses of the Erie Floral Co., has accepted a position as foreman of the rose department with G. Van Bochove & Bro. of Kalamazoo, Mich.

TAKE advantage of bright days to ventilate judiciously and harden up the stock.

GOLDEN ROD, embroidered in silver on Mrs. President Taft's inaugural gown is said by the daily press to be indicative of her preference for that flower as a typical American one.

THE legislative and tariff committee of the Society of American Florists held a full meeting February 24. A resolution was passed, voting specific rather than ad valorem duties. It was the sense of the committee that on any article where the florists, seedsmen and nurserymen meet in common interests, there should be a conference, and a unity of action by the three organizations in placing the views of the trade before the ways and means committee.

The Late E. V. Hallock.

Kindly, thoughtful and considerate of others, genial, modest and unassuming, an altogether lovable personality; that was Edward V. Hallock as we, his many friends, knew him. A close, keen observer, widely read, a master of his profession, a careful, logical thinker, his public utterances all too few, whether written or spoken, always deserving and receiving careful consideration, he has stood high in our councils. The printed pages of our proceedings speak for the work he has done but they do not, cannot, convey an idea of the charm of his manner, the winning tones of his voice, his friendly smile. We have lost a friend; the profession has lost one of its leaders; the community in which he lived has lost a good citizen. A MAN is dead.

WILLIS N. RUDD.

PRESIDENT VALENTINE wires: "Mr. Hallock's influence has been so refining and uplifting, his interest in educational matters so keen, that his death is nothing short of a calamity to the Society of American Florists, and to everyone who was privileged to know him."

EX-PRESIDENT TRAENDLY wires: The death of our dearly beloved president, E. V. Hallock, coming as it did like a flash of lightning from a clear sky, leaves a vacancy in our profession which it will be hard to fill. Mr. Hallock's work as trustee of the New York Florists' Club, and also his short term as president, had endeared him to all members of the club. To the florists of the country his work as a member of the executive board of the S. A. F. was well known. This was shown more in his work for the cause of school gardening, and in his death this work will lose its foremost champion. Personally Mr. Hallock was of a very lovable disposition and one of the pleasantest weeks of my life was the week I spent with him at his farm in the Catskills.

TREASURER H. B. BEATTY wires: "I was inexpressibly shocked on receipt of your telegram advising death of E. V. Hallock. The horticultural interests of the country have lost a very able and capable man, one who will be more missed than perhaps at this moment even we his friends realize. The benefit of the work he has done in relation to school gardens can hardly be calculated. His family has lost a true and loving father. We have lost a close, sincere and loyal friend."

PRESIDENT AUGUST POEHLMANN of the American Rose Society writes: "In the death of E. V. Hallock the florists have lost a true, loving companion, a man of men, one who was always ready to respond with kind word or deed when called on, a man of genial, loving and lovable disposition; the members of the American Rose Society will sadly miss him. To his daughters we can but express our most heartfelt sympathy."

EX-PRESIDENT C. B. WEATHERED, of the New York Florists' Club, wires: "The New York Florists' Club and horticultural world have met with an irreparable loss. The blow is too sudden, too great for any individual to express even a thought. Our hearts are stunned and tongues tied."

SECRETARY JOHN YOUNG, of the New York Florists' Club, wires: "It is hard to realize that E. V. Hallock is no more. We have all sustained the loss of a good friend. Working together as we had been I had learned to love him. His life should be an example for us all."

WALTER F. SHERIDAN wires: "I was deeply moved at the announcement of Mr. Hallock's sudden death. His friends will remember him as a courteous gentleman, warm and earnest in his friendships. An able president is lost to the New York Florists' Club, which under his administration had just entered on what seemed to be the most successful period in its history."

F. R. PIERSON wires: "Am inexpressibly shocked to learn of Mr. Hallock's sudden death; it doesn't seem possible; nothing I can say would express my personal feeling of love; no one knew him but to love him."

American Rose Society.

BUFFALO EXHIBITION MARCH 17-19.

The schedule committee and the executive committee of the American Rose Society held a joint session last Friday in New York. President Poehlmann has appointed a committee to consider the examination and requirements of new roses. Robt. Simpson of Clifton, N. J., is chairman. Applications for recognition by the society of three different roses was brought up. The schedule committee reported upon their work in revising the schedule, a preliminary copy of which has been published. A report was also given on the awarding of special prizes. The value of the prizes as computed by Mr. Pierson, is equal to $1,000 at the present time, and several persons have advised that they would like to put up special prizes for the Buffalo exhibition; these prizes have not yet been received. The Iroquois hotel will be the headquarters. Papers are being prepared by five different persons upon matters of pertinent interest. Leonard Barron has offered to give an illustrated lecture on this occasion. All entries from a distance may be sent in care of Vice-President Wm. F. Kasting, 385 Ellicott street, Buffalo, N. Y. The exhibition will open Wednesday afternoon, March 17, at 5 o'clock in the Iroquois hotel and continue over March 19.

BENJAMIN HAMMOND, Sec'y.

Society of American Florists.

REGISTRATION OF CARNATION.

W. H. Shumway, of Berlin Conn., offers for registration Carnation Edward, described below. This application having been submitted to the American Carnation Society and having received its approval is accepted and the carnation as described is registered. "This new seedling carnation is a product of five years' development; Enchantress is one of its parents, the other not known. The habit of growth is good, branching well, with foliage of good color and substance, easy to propagate, a rapid grower with stems 24 to 30 inches; flowers from three to four inches across, well built up, very full, color a deep pink with good calyx."

W. N. RUDD, Sec'y.

Plant Notes.

Cissus discolor is an old and well known plant that should be more used. It is excellent for basket arrangements either by itself or in conjunction with Boston and other ferns but should not be used with other foliage plants. To bring out the bright color in the leaves and stems, which is its chief attraction the vines should be well exposed to light and grown in a moist, warm house. They will then color up splendidly. A moderately rich soil only is needed. Cuttings of the leafless wood strike freely in winter or the young shoots in spring.

Dipladenia Boliviensis is a beautiful plant, not nearly so liable, with its smooth leaves, to be attacked by insects as D. amabilis and others of the rough leaved section, and more easily cleaned if the insects do appear. The flowers are pure white with a dense yellow eye and produced with the greatest freedom. It also thrives with less heat than the other dipladenias.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—By experienced florist, to take charge of store and conservatory.

St. Louis.

ROSES MORE PLENTIFUL.

Of late the first few days of Lent have showed quite a falling off in society events and this year it is thought will be the same as others, and that the market will not suffer materially from its observance. However, carnations have become decidedly plentiful, and good, clean stock has sold for $1 per 100. Roses, which have been very scarce, have at last started to accumulate, and if the bright weather continues, will become a glut. Violets have felt the slump and fell to $1 per 1,000, but the growers have curtailed their supply and in consequence the price rose to $2.50. Bulbous stock of all kinds is now very plentiful and the troubles of the commission man have begun again.

NOTES.

City Forester Meyer has succeeded in having the ordinance passed prohibiting the ice men and ice cream dealers from depositing salt water in the gutters, thus injuring the roots of the trees. An ordinance has also been passed compelling the use of electric engines through the railroad tracks at Forest park. This affects the Wabash system.

Rudolph Kaag, a native of this city, who has been employed in Chicago, is visiting his folks prior to going east to a new position.

William Smith Wholesale Floral Co. handled one day last week over 75,000 California violets and sweet peas from local growers.

Riessen Floral Co. had the decorations at the Planters hotel at a banquet given to Joe Folk, late democratic governor of the state.

Adolph Brix, J. F. Windt and Charlie Schoenle are busy endeavoring to bring the crepe pullers to justice.

John Burke is with us again and will be manager at Julius Schaeffer's store on Sixth street.

Young & Sons expect a fine supply of lilac, lilies and other bulbous stock for Easter.

Visitor: F. Lautenschlager, of Kroeschell Bros. Co., Chicago.

W. F.

PHILADELPHIA, PA.—C. M. Keegan put up a splendid decoration in Horticultural Hall on the occasion of a recent dance. The hall was hung with smilax and the stage was banked with pink and white azaleas, marguerites and Easter lilies.

STOCK PILING UP.

The Lenten season, coupled with bright weather, caused stock of all kinds to pile up in the wholesale houses and for the first time in quite a while buyers are able to buy at their own figures. Carnations, probably, are the slowest sellers, although no fancy price can be obtained for roses any more. Bulb stock is more plentiful with the usual result of affecting the two first named flowers. Lilies and American Beauty roses are still in good demand. Violets, both single and double, also sweet peas, are here in quantities at low prices.

NOTES.

E. C. Ludwig had the decoration at the memorial services of the F. O. E. at the Grand theatre, February 28. The decoration was very artistic and won the admiration of all present.

The United States Floral Co., of DeHaven, was incorporated at a capital of $325,000. The incorporators are A. T. Lorch, I. H. Hoffmeister and L. Bourche.

The McCallum Co. states that the violet trade is very good. This firm is also selling a good many gardenias.

P. J. Demas is the proud possessor of a 14-pound boy, which was presented to him February 27.

Julius Ludwig left March 3 with the tariff club for the inaugural at Washington.

J. B. Murdoch & Co. are receiving a nice cut of Longiflorum lilies.

Visitors: H. N. Bruns and E. Wienhoeber, Chicago; J. H. Milner, Ada, O. J.

ALBION, N. Y.—J. T. Duquette's loss in the recent fire was much heavier than reported. He lost 100 boxes of glass on one house, his hot water apparatus cost $800 and the potting house, new propagating house and other structures and their contents were destroyed bringing his loss up into the thousands. Mr. Duquette will rebuild using cement extensively.

Waterproof Crepe Paper.

IMPORTER'S CONTENTION OVERRULED.

The protest of A. Hermann, of New York, before the United States board of general appraisers was overruled by Appraiser Fischer. The merchandise in question was a heavy crepe paper, said to be waterproof, such as is used by florists in wrapping around flower pots. It was classified by the collector as crepe paper and assessed with duty at the rate of five cents per pound and 15 per cent ad valorem under the specific provision therefor in paragraph 397, tariff act of 1897. The importer claimed it to be dutiable property at 25 per cent ad valorem under paragraph 402 of said act, as paper not specifically provided for. The appraiser decided that the term crepe paper in the tariff act is not confined to crepe tissue paper, but applies as well to similar and heavier papers which have been subjected to the creping process.

Chicago.

LENTEN DULLNESS.

The market has been very weak with large supplies of stock and not sufficient demand to move off the surplus even on forced sales. The poorer stock in all lines as well as the carnations with weak calyces were found to be almost impossible to move. The only exception to the above was in the item of American Beauty roses, which were somewhat scarce. Prices, however, did not rule any stronger in this line, because of the abundance of other stock, and the fact that the most of this stock was not really high grade. Other roses were very plentiful with Bride and Bridesmaid showing fine quality as well as quantity. Plenty of other roses could be had at easy prices, and quality, for the most part was good. Carnations came in very freely but the soft and changeable weather was reflected in their quality, the stems not seeming to hold up as well as usual. Bulbous stock is very plentiful, with unusually fine flowers the rule. Some outdoor tulips have already made their appearance. Violets have been a glut on the market with some sales made at sacrifice prices for large quantities. The heavy increase in the supply of local single violets has affected the whole line, and both doubles and singles were very weak.

NOTES.

Chas. A. Schnell has accepted a position as manager of the floral department of the L. S. Donaldson Co.'s Glass Block at Minneapolis, Minn. This is an important position, as, besides the large amount of cut flowers and plants grown the outskirts of the city, the trade calls for large shipments of cut flowers from this market. Mr. Schnell's work as a designer has been frequently illustrated and commented upon in our columns, and here he will have a much wider scope for his undoubted abilities, and we wish him every success.

Marshall Field & Co. have adopted a unique advertising feature in connection with their spring opening by displaying a number of hats trimmed with the so-called Japanese air plants and natural flowers. This was hailed by the daily papers as the latest fad in millinery, and certainly could this walking flower garden become a habit it would prove a great boon to the trade, especially in the spring when flowers are both cheap and plentiful.

The E. F. Winterson Co. report the receipt of a carload of hardy Belgium stock. Many new shapes in baskets are shown in the Easter novelties just received by this firm's supply department.

Chas. Frueh, Sr. and Jr., were in town last week making arrangements for the erection of four new greenhouses. The John C. Moninger Co. of this city will furnish the material.

John Degnan, of the E. F. Winterson Co., has the sympathy of the trade in the death of his father early Monday morning after a lingering illness.

Ernest Oechslin, who suffered from a serious gunshot wound is now out of danger, but is still too weak to see anyone.

BANQUET OF THE NEW YORK FLORISTS' CLUB, FEBRUARY 27.

New York.

BAD WEATHER AND LENTEN SEASON.

Lent was ushered in with torrents of rain, which continued practically for 24 hours and as a consequence business was for several days almost at a standstill. A sudden change to cold weather the latter part of the week probably contributed somewhat to reducing the supply of stock received in the wholesale district; but prices kept dropping. Special American Beauty roses went down to 40 and 50 cents, with a decline in teas. The best carnations sold for four cents and were slow at that. Violets found their level on the street corners, at about what was offered, which is never a high price. Yellow narcissus, sweet peas and lily of the valley were also being sold on the streets.

NOTES.

Chas. Millang's new store, corner of Sixth avenue and Twenty-seventh street, now presents a very fine appearance, the outside being pretty much all plate-glass. Passers by are constantly being tempted in by the fine displays of seasonable stock. The interior is well fitted up for carrying on a wholesale cut flower business. As the buyers for the big retail stores all have to pass it, or go in, they generally compromise by going in.

The retail store opened last fall by members of the Trepel family of Brooklyn, at One Hundred and Twenty-ninth street and Seventh avenue, Manhattan, has been closed. It was under the management of Jack Trepel, who, being a bright young man, will doubtless soon again get into business. It appears that the chief cause for closing was that the locality had already enough stores.

The next meeting of the New York Florists' Club will be held in the Grand Opera House building, March 8, at 8 p. m. It will be rose night and promises to be an interesting event. W. H. Elliott of Brighton, Mass., will give a talk on "Roses" which is expected to be interesting and instructive.

Abram Jacobs, who recently took the Chas O'Reilly store on Columbus avenue, has been doing some good work in decorating, one of his latest jobs being a fine decoration for a ball at the Twenty-second Regiment armory.

Banquet of the New York Florists' Club.

The annual banquet of the New York Florists' Club was held at Shanley's, Broadway and Forty-second street, on the night of February 27. About 160 were present, a good proportion being ladies. The decorations of the hall, thanks to Alex. McConnell, chairman of the committee on decorations, were elaborate. On each table were vases of fine roses and carnations; the walls being tastefully draped with southern smilax. There was music by an excellent orchestra and several professional artists had been engaged for the occasion; these entertained the company with songs, recitations and dancing.

In addition to Patrick O'Mara, who made the speech of the evening in responding to the toast "Our Night," brief addresses were made by S. S. Butterfield (for the press), A. J. Guttman (for the ladies), John T. Withers, Harry and W. J. Eliott, Turner, John Young and Chas. H. Totty, the latter's subject being "Mum's the Word." A pleasing feature of the event was the presentation to Ex-President Weathered, of several handsome pieces of silverware for table use. The presentation speech was made by Walter F. Sheridan, who paid a tribute to the worth of the retiring president. Mr. Weathered responded in a feeling manner. At the close W. C. Rickards led the audience in singing "Auld Lang Syne." Noteworthy visitors were Chas. Vick, Rochester; M. Hart, Buffalo; Leonard Vaughan, Chicago.

Letters of regret were read from Governor Hughes, Mayor McLellan, J. C. Vaughan and others, including Wm. C. Stewart and the president of the Society of American Florists. A melancholy interest attaches to the following remarks by the late E. V. Hallock, who died suddenly March 2; these being the last remarks made in public by our highly respected president.

In his opening remarks he expressed his delight at seeing such a pleasant gathering, and especially was he pleased with the idea of the ladies being present. He called attention to the very good feeling and lack of jealousy among the members of the club, many of whom are in very close competition with each other. He likened the florist to the volunteer who presses on through dark and gloomy days of war, but finally his days of gladness come. He likened the banquet to one of the bright spots in the routine life of a florist. He emphasized the sterling qualities of the members of the club which are well proven by the manner in which it is conducted and the trade interests developed. In closing he extended a most hearty welcome to the visitors and friends and bade them enjoy themselves and be jolly. Little did anyone think how soon this excellent and worthy man would be removed from our midst.

The toastmaster then called upon Patrick O'Mara for the first speech of the evening, "Our Night." The speaker said it was a long time since he had been privileged to speak on a subject so dear to him, as the one given him for the occasion. He thought there were many pleasant memories attached to "Our Night," for all who had marched shoulder to shoulder as members of the New York Florists' Club. These memories were shared by the "partners of their joys and sorrows," in the case of the most of the florists, even if they were not with the speaker. He said he thought the ladies would find that the members of the club had a very enjoyable time when they took a night off, as they were doing on this occasion.

The speaker mentioned the fact that the club had its sorrows as well as its joys, and called for a silent toast in memory of the departed friends. He called attention to the remarkable advances made by the club and said that in his opinion it was foremost in this country among organizations of its kind. Having been born of necessity for organization it had well fulfilled its mission, the motto having been one for all and all for one. Within its doors ideas are exchanged and much benefit derived by the members from such discussions, social as well as business interests had been advanced and many bonds of friendship formed at the club meetings.

LENTEN SEASON FELT.

There has been a perceptible falling off in business since folks have all taken to going to church on week days. Of course there are the usual small dinners and anniversary occasions, etc., and those for the inevitable, which keeps the wheels from stopping altogether. These demands have managed so far to keep stock from accumulating. Roses are becoming much more plentiful and prices, owing to the light demand, are receding, the difference being at least 25 per cent below those of a week ago. American Beauty is still scarce, there being little or no surplus even with the light demand. Carnations are fine and sell fairly well. Some new crops of freesia of good quality are coming in; $3 to $4 is the price. Sweet peas are selling well and some fine flowers are seen. Princess of Wales violets are now having their innings, some very choice stock coming in. Double violets are also plentiful, there being gospel measure in the bunches of 50. Bulbous stock, particularly daffodils, is seen in quantity and prices rule low ranging from $1.80 to $2.50 per 100. There is a splendid assortment of flowering plants coming into the market at present, azaleas, rhododendrons, primulas, pans of bulbous stock, cinerarias, Easter lilies, pots of lily of the valley, daisies, etc., all of which are utilized to great extent in window decoration. Pennock Bros' window feature last week was well flowered apples, almonds, etc. Paddy's day is next in line and quite a few of the growers offer the Simon pure shamrock in pots and pans of various sizes from one inch in diameter upwards. W. K. Harris is the originator and leader in this novelty and now grows annually about 75,000 pots. He has two sizes of shamrock-shaped pots and these are good sellers. The majority of this large stock goes to department stores who give it away as an advertisement. A large lot is, however, handled by the trade and much of it is shipped over the country.

FLORISTS' CLUB MEETING.

The March meeting of the Florists' Club held on Tuesday evening was a very lively affair. The feature was the paper of Wm. Kleinheinz, on "Gardenias." This gave the results of his experience and was very instructive, being thorough and filled with ideas for the grower of this plant. An interesting discussion followed. The question as to whether Rose My Maryland went dormant in the middle of winter, brought many to their feet. Mr. Samptman, who has had great success with this variety, claimed that it required more heat than any other of the forcing varieties and that with his firm it was quite the equal of other winter flowering sorts, in fact nothing they had grew as freely; they had rooted 60,000 cuttings from 1,200 plants since last fall and the stock plants were still vigorous and full of growth and throwing up strong shoots with buds. Others spoke of its going dormant with the same temperature given the other popular sorts growing in the same house and the opinion seemed to be that under special treatment it could be kept in bearing the season through. The Pennock Meehan Co. exhibited a superb vase of White Killarney rose from the Waban Rose Conservatories, Natick, Mass. Wm. H. Allabaugh, Perkasie, exhibited a fine white seedling antirrhinum, and Wm. Klienheinz a white seedling carnation. John Westcott received a hearty welcome home from the Isle of Pines and Chairman Grakelow started a subscription for a club piano. The topic for the April meeting is to be a "Trip to the Tropics," being an account of the recent visit of Robert Craig and John Westcott to the Isle of Pines

NOTES.

J. Heacock attended the exhibition of the Boston Market Grower's Association last week and staged 100 flowers of his new seedling carnation, Dorothy Gordon. The flowers carried well and attracted much attention. Mr. Heacock says that compared with Enchantress, which has done very well with them this season, Dorothy Gordon up to this time has produced 30 per cent more flowers and realaized 50 per cent more money, which is certainly an excellent showing.

The sympathy of the trade goes out to W. K. Harris in the loss of his daughter Florence, wife of Dr. D. A. Stein, who died from the effects of an operation for appendicitis. The funeral was held on Monday last. Mrs. Stein was a great favorite with all who knew her and the room was filled with beautiful flowers, clusters and wreaths in combinations of the choicest flowers.

John Westcott returned from his trip to the Isle of Pines and is very enthusiastic over the climate of this garden spot as a winter resort. He says he enjoyed every minute of the journey. Robert Craig and Julius Roehrs are to return this week.

The Leo Niessen Co. says it is satisfied with the Lenten season as the lower prices are moving the stock nicely; choice Killarney and Richmond roses and acacia were the features the past week.

Geo. Samptman has severed his connection with the Florex Gardens at North Wales and will go into business on his own account.

W. E. McKissick & Bros. are right in it with choice Princess violets; they are certainly fine and touch up the stock in any store. K.

Boston.

FUNERAL WORK PLENTIFUL.

The opening week of the Lenten season brought a reversal of the fine trade situation as enjoyed through the present month, which, although the shortest one of the year, leads all others to date in volume and receipts. From now on funeral requisites will be the principal reliance of the trade and at present the demand is averaging up encouragingly and is well distributed among the dealers. A rapid recovery from the short market of the past two weeks has been made and growers are well supplied with all the leading requirements. Bulb stock is surprisingly cheap and displayed in great quantities. Yellow windows are all the rage and prices have dropped to the bottom. Roses are being received in larger quantities each day and, while still attractive, are gradually sliding back to a more moderate price. American Beauty has dropped to $6 per dozen for the best. Killarney and Richmond run very close together. Good carnations are rather scarce and the greater part of the stock is only medium.

NOTES.

Andrew Muir, for many years employed on the Coolidge estate at Watertown, and long a familiar figure around the floral centers as violet salesman for the concern, is confined to his home as a result of being waylaid and assaulted while entering his house. Mr. Muir was known to always carry considerable money on his person and to secure this the highwaymen assaulted him with a window weight. After beating him until he lost consciousness he was relieved of $60, the robbers making their escape. Mr. Muir is well over 60 years of age and while hopes are held out for his recovery his condition is extremely precarious.

F. J. Dolansky, of Lynn, who has made wonderful strides since establishing himself six years ago, is planning an addition to his plant of 30,000 feet of glass. Along with the greenhouse department an attractive store is conducted in both branches.

R. E. Lassman, the dean of the growing fraternity, is right in line with the younger element with a crop of high class novelties. Among them we noted anemones and ranunculus in fine shape.

The salesmen of the Music Hall Market have subscribed an exquisite silver cup of the most artistic design for competition at the exhibition March 20. B.

Massachusetts Horticultural Society.

Mrs. Charlotte R. F. Ladd of Sturbridge was the speaker before the Massachusetts Horticultural Society at Horticultural Hall, Boston, February 27, her subject being "Rural New England." The paper ran perhaps more on agricultural than horticultural lines, but was well thought out and interesting. In her closing remarks the speaker said: "No words can fittingly describe the power of a beautiful home. Once begin to beautify the home and you have more respect for it and your boys and girls will love and reverence it and be stronger, purer and better. The success of the farm does not depend any more upon the crops which it produces than it does upon the intelligence, contentment and happiness of its people. The New Englander, no matter how much he may be westernized, or where he has traveled, keeps an unexpected fund of sentiment for the New England home which is not excelled anywhere in the country. We have some of the largest manufacturing establishments in the world and no finer fruits or vegetables are raised anywhere."

BEAVER FALLS, PA.—In the very near future the Pittsburg & Lake Erie Railway Co. intends to begin the erection of the greenhouses from which the station lawns of its entire lines will be supplied with flowers on property owned by the company near the Beaver station.

INAUGURATION DISPLAYS.

The city is apparently one of flags and bunting, for there are very few houses or business places which are not displaying the national colors in honor of the inauguration. The court of honor, which extends along the front of the treasury, White House and state, war and navy departments, is in readiness for March 4; the garlands or roping around the columns and the baskets of flowers at the top of the shield poles, which are filled with flowers, and palms, are a grand sight to behold. The decorations at the pension office will also be the most elaborate ever seen in this city. It is in this building that the inaugural ball is held.

The grand stands, too, are decorated, and the sight as a whole reminds one of what we read of the old time Roman festivities. Washington official homes, and especially those of the incoming or holdover notabilities, will be thronged this week, and there is no doubt but what the florists will have another exceptionally busy week. Stock is coming in plentifully and there ought to be enough to supply the demand.

INAUGURAL DECORATION (BY WIRE).

The interior or court of the pension building used as the inaugural ballroom is decorated on the first balcony, on the capital of each column, with vases of rambler roses, forsythia and other spring flowers, with southern smilax and vines covering spandrels and trailing through and over arches. On the panels of the balcony between the columns are placed flowering azaleas and southern smilax and ferns radiating therefrom. On the base of the upper balcony columns, between the clumps of azaleas were placed wreaths of laurel of suitable proportions, while hanging from the center of each arch are baskets of growing ferns. The second balcony is similar to first but palm leaves and other foliage and laurel wreaths at each post, smilax and ferns drooping through and below the arches. The music stand is decorated with azaleas, ferns and spring flowers, in comformity with the general artistic effect of balcony decorations. The president's stand is decorated with American Beauty roses, orchids, spring flowers and other cut stock, Roman wreaths, in harmony with the whole scheme of decoration. Around the fountain are palms, flowering plants and aquatics, a guard three feet high decorated with vines, plants and flowers. The president's, vice-president's and diplomats' rooms are finely treated with orchids, roses, etc. The supper, side rooms, entrances, and stairways are lightly decorated with growing ferns, southern smilax, etc., the work being carried out by J. H. Small and Sons. In the decorations of the court of honor, 600 yards of heavy laurel roping were used hanging in garlands from column to column; 200 bundles of laurel, entwined with waterproof flowers, adorn the huge columns at the intersecting streets. Eight baskets, four and one-half feet in diameter, filled with palms, waterproof flowers and laurel, are set on top of the capitals of the columns. Some 200 baskets of the same material adorn the tops of totem poles, and the profusion of electric lights makes the decorations complete. The committee of inspection highly commended the work and claim it the best ever seen. Gude Bros. executed this portion of the work. According to the leading florists business has increased at least 50 per cent. G. S.
